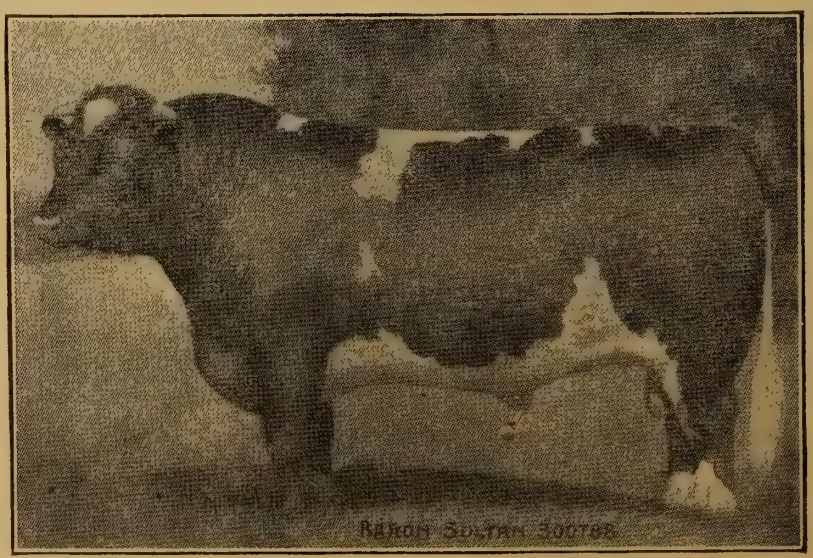
At the week-end conditions are much less favorable for a good run of cattle getting good action here next week than was the case a week ago, but buyers are counting on muddy feed lots prompting feeders to unload freely and looking for a run of 25,000 cattle here on Monday. Should that many arrive declines are certain for acute beef scarcity in evidence a week ago, has been relieved and buyers are under less pressure. Trade sentiment as concerns the market outlook for the next thirty to sixty days is not pronounced either way, but at present nearly everyone concurs in the opinion that half-fat stuff ought to be held back at this juncture. Lack of knowledge regarding the number of heavy steers in feeders' hands renders the trade cautious in making forecasts, but there are doubtless plenty of these overweight steers which are now running into a season of unpopularity and the policy of feeders boarding such bullocks longer is seriously questioned. Two years ago when feeding conditions were much the same as at present, but when the best beeves that ever walked sold at $6.25 to $6.40, feeders nursed the market by the questionable policy of holding fat cattle back, the result being a deluge late in April and May, accompanied by sharp price breaks.

One factor in the decline on the lower-priced grades of steers this week has been lack of country competition, the stocker and feeder market having been near the point of stagnation since last Monday. Ffteen to twenty-fivecent declines have been registered and a clearance on that basis has been impossible, about 1,500 head going over unsold in yard dealers' hands. Various factors have been operative at the lower levels. A large part of Ohio, Indiana and Pennsylvania are still out of the buying end of this trade, prices had worked to a point last week that looked top heavy and the threat of free meats seems to have exerted a deterring influence on investors, while a week of excessive moisture over the greater area supplied with stock and feeding cattle from this market has put feed lots and stock fields in no position to receive cattle and operated materially against a free outlet at this time when it is a little too early to turn stock on pasture. Less than a half dozen loads of steers went to the country from this market this week costing $8.00 to $8.25, a spread of $7.60 to $7.90 having taken most of the good to choice 8,50 to 1,100-pound feeders and $7.75 having stopped toward week-end most anything in the steer yearling line, although fancy yearlings are still quotable up to $8.00. Most of the fair to good stockers sold at $7.00 to $7.50, very few below $6.85 and best feeding heifers $6.50 to $6.75, while plain and common light-stock heifers ranged down around $6.00.

Butcher stock values have not followed the decline in steers, due to a short week's supply of such goods. In fact most of the stuff of medium to best class is selling ten to fifteen cents higher than a week ago and bulls above canner and stocker class are fifteen to twenty-five cents higner, with bolognas and fat bulls as well as good to best grades of cows and heifers hitting the best levels of the season. Canners and plain low-grade dairy cows have not shared in the improvement and close dull and week. High prices recorded in this branch of the trade this week have included heavy bologna bulls up to $6.75, stiller-fed bulls to $7.40, a few prime to fancy corn-fed bulls of handy weight at $7.65 to $8.00, choice heavy-fed cows in carload lots to $7.85, individuals as high as $8.25 and a sweet load of 591-pound Texas-bred, Kansas-fed Hereford heifers, coming yearlings, at $9.00. The last-named sale was the sensation of the week's trade, but the load was in a class alone, most of the baby beef fed heifers of strictly choice class selling on a good market from $8.00 to $8.40 and bulk of the good to very good fat heifers at $7.25 to $7.85. Calves close



The illustration shown herewith is that of Baron Sultan the noted Scotch bull at the head of the Short-horn herd of A. E. Shoebotham, Fairbury, Neb. Baron Sultan was sired by the great and only Whitehall Sultan and out of Athene of Riverdale by Imp. Victoria's Count. Choice young bulls by Baron Sultan are being offered by Mr. Shoebotham. Kindly notice the advertisement on page 46 and write for prices at once. Kindly mention The Homestead.

with a fifty to seventy-five-cent bulge in prices over Tuesday, low day of the week and twenty-five to fifty cents higher than a week ago, but promise to make work to Tuesday's basis when $8.25 to $8.50 bought most of the good to choice veals, in event receipts early next week reach the volume anticipated. Subsequent to the heavy spring limidation of dairy calves, a lightly supplied and high level market for the summer and fall months is indicated as very few calves of other than dairy herd breeding are expected to show up at market. Quotations:

Good to ch. heavy calves	6.25@6.75

HOGS.

Chicago receipts of hogs this week will foot up the smallest total of the year and other markets have also been modestely supplied, the five-day total at eleven points being 69,000 less than like period last week and 47,000 less than a year ago. Storms, sharply cutting down supplies at Omaha and Sioux City toward the week-end. Curtailed shipping demand is exerting a depressing influence on the light-hog market, eastern shippers having taken but little more than half as many hogs at Chicago this week as lost, and a somewhat larger quota of light weights than recently, is showing up. The sharply deduced supply, however, has lifted the whole list to higher levels than a week ago. Top lights sold Friday at $9.37, against $9.30 a week ago, while heavy butcher and packing grades show fifteen to twenty-five-cent advances and a general average price of $9.22 is eighteen cents higher than a week ago. Country advices do not indicate any material swelling of supply and packers seem to regard money invested in $9.00 hogs as well spent. There is money in putting weight on hogs at current cost of corn. Commissionmen report that a percentage of their customers will hold their hogs until corn planting is over, but this does not necessarily imply that more lard is running around the country on four legs than will be needed. It is an undisputable fact that Omaha and Sioux City territory, which disgorged a big hog crop last spring, cannot repeat this year. Only rough, common packers are now selling below $9.00 and $9.15 to $9.30 took 85 per cent of yesterday's supply.

SHEEP.

The week in the live mutton trade closed with fat classes selling about twenty-five cents higher than a week ago, but steady to fifteen cents lower than the high time here at mid-week when everything on the list, excepting wool lambs, made the highest levels of the season. High spots touched during the week included wooled Colorado-Mexican lambs up to $9.35, shorn lambs to $8.30, wooled aged sheep of fancy class to $7.90, shorn sheep to $7.00 and wooled yearlings to $8.50. At week-end eastern dressed mutton markets are in droopy condition, following a high-flying trade during the fore part of the week that was responsible for bulge in hoof prices. This evidence of the consuming public balking at high prices demanded for the dressed products is not to be ignored in forecasting trade events, but supplies of sheep and lambs that will be available for the next thirty days are in strong hands and if reports coming from Colorado as to the number of lambs now left in feeders' hands are to be relied on, a repetition of last year's high level late April and early May market at that juncture would not be surprising. Buyers are now showing preference for shorn goods over wool skins at the prices and as the season ages this prefence will become more pronounced. Much of the supply is now coming minus fleeces, and holders of stock now lacking finish will doubtless find the shearing operation profitable. Free wool threats are dulling demand for feeders and that end of the trade is quiet and no better than steady with a week ago. Quotations.

WOOLED STOCK.

NEXT WEEK AT SOUTH OMAHA

IN THE SALE PAVILION

We're going to the sale.

TUESDAY, APRIL 22, 1913,

GEO. ALLEN & SONS

WILL SELL 55

SCOTCH PEDIGREED SHORT-HORNS

PROBABLY the grandest collection of Scotch pedigree cows ever offered in a Western sale, or in fact anywhere will be placed at your disposal at this time. One of the very best collections of herd-heading bulls sold in recent years will be presented. Those in search of the extra select will find them in this offering. If really interested wire us immediately for the catalog. Plan to be on hand sale day. Duncan and Callahan, Auctioneers.

GEO. ALLEN & SONS,
LEXINGTON, NEBRASKA

FIRME & STONE'S

ANNUAL SALE OF

PEDIGREED SHORT-HORNS

Will be held in sale pavilion in

HASTINGS, NEB., WEDNESDAY, APRIL 23

40 CHOICE SELECTIONS, 15 BULLS AND 25 FEMALES ARE LISTED FOR THIS SALE.

THEY consist of some of the very best of our herds, and will constitute one of the very best offerings that we have ever sold. They are of good pedigree and possess great individual excellence. The blood of Champion Goods, Improved Goods, Victor Archer and a few other sires of note will be found in this offering. They are grown in the best possible manner and are of much worth to the stockman in need of good breeding material. Three daughters of the great breeding cow, Virginia Dare, will be included. They are as great a collection from one dam as will be sold this season. Improved Goods, is one of the great bulls of the day. Daughters by him, or cows bred to him will be good investments. Roan Goods is the sire of some of the young things. He is a son of Best of Goods. Stockmen that would appreciate the opportunity offered of making selections from stock that are of very high order should attend this sale. The catalog will be mailed to all that apply, mentioning The Homestead. Address at once, either

R. C. FIRME, Hastings, Neb., or A. A. STONE, Hansen, Neb.
Col. H. S. Duncan, Auct.

TOO LATE TO CLASSIFY.

HERD-HEADING POLAND CHINA BOARS.

HOMEWOOD STOCK FARM
PERCHERON STALLIONS AND MARES

It is our intention and has been for the past five years to make a complete clearance every spring so as to give our customers fresh, clean horses each year. We will therefore quote very low prices on all stallions and mares to move them quickly. Every animal with the exception of the home breds were imported by us last fall and are now in prime breeding condition. Stallions are rising three and four year olds. Are blacks and grays and are weighing from 1,850 to 2,150. They are sound, excellent individuals and fit to go into any community needing the services of a first-class draft stallion. We have a few matched pairs of imported mares. If you want a real bargain in a first-class animal of either sex come and see us at once or write for full particulars. Terms to suit anyone. Homewood is conveniently located twenty-three miles south of Chicago on I. C. and Big Four railroads. Trains to and from the city every hour. Barns near station, Belle phone Homewood 58 W.

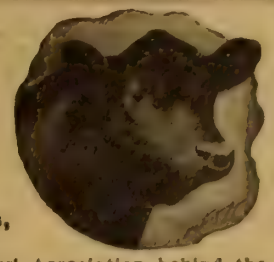
AMERICAN ABERDEEN ANGUS BREEDERS' ASSOCIATION ANNUAL SPRING BULL SALES



Union Stock Yards, South Omaha, Neb.
Tuesday, April 29, 1913
75 Aberdeen Angus Bulls 75

Union Stock Yards, Chicago, Ill.
Thursday, May 1st, 1913
95 Aberdeen Angus Bulls 95

170 Aberdeen Augus Bulls to be Sold at South Omaha and Chicago in one Week. Matured Bulls, Two Year Olds and Yearlings

PARTIES in market for bulls should bear in mind they have the leading breeders and the American Aberdeen Angus Breeders' Association behind the bulls that will be offered. There are listed Blackbirds, Trojans, Ericas, Prides, Queen Mothers, Barbaras and top-notch representatives of all the other leading families.

The Association has made a systematic inventory of all bulls fit for service in the country and has cataloged every bull that is old enough and has merit worthy of use. These sales will be the last and only opportunity for breeders, farmers and rangemen to secure a bull or bulls this season.

Don't forget, cattlemen and breeders, the Aberdeen Angus is the greatest beef breed of the world. This has been demonstrated at the International, Chicago, the Greatest Stock Show of the World.

At the International Aberdeen Angus have won nine grand championships on single steer out of a possible thirteen, ten grand championships out of a possible thirteen in fat carload lots and twelve grand championships out of a possible thirteen in carcass contest. The International has been conducted on a practical basis for thirteen years and its results prove conclusively the Aberdeen Angus lead all other breeds in beef production because they have won more prizes when pitted against other breeds than all other breeds combined.

Prospective bull buyers can attend these Association sales with absolute confidence, they will be dealt with squarely and get good value for their money. Everything will be sold, if it does not bring more than a beef price. The Association's paramount object is to create central bull trading points, regardless of expense. **The breeders who have consigned these bulls are prepared to sell them at farmers' prices.**

Anyone in need of a bull should send for a catalog or catalogs at once and study the names of the breeders who have consigned the bulls and the blood lines of the bulls listed.

If a glance at the catalog does not reveal and convince anyone the offerings consist of more useful and richly bred bulls than have ever been cataloged by any individual breeder or combination of breeders in America in the past, a trip to either or both sales will. Come and inspect and examine the bulls. Only healthy bulls will be offered. Anyone unable to attend the sales should arange with his commission firm to secure his needs. Bids sent to Col. Silas Igo or Chas. Gray, secretary, will receive careful and personal attention. For further information and catalogs address

Cols. Silas Igo and W. A. Judy, auctioneers.

CHAS. GRAY, SECRETARY AND SALES MANAGER, 817 Exchange Avenue, Chicago.

ABERDEEN ANGUS CATTLE.

Overland

Increased orders over 100%

THE leading agricultural states of our own country, and the three principal agricultural provinces of Canada, have already contracted for over 100% more Overlands than they did a year ago. They wanted even more than this but we could not supply the demand.

American farmers have already taken more than twice as many Overlands as they bought last year—and the season is only half gone.

A few of the individual increases for Overlands for 1913, over 1912, by states and provinces, are as follows: North Dakota, 152%; Kansas, 134%; California, 101%; Colorado, 93%; South Dakota, 85%; Texas, 84%; Minnesota, 78%; Iowa, 61%; Oklahoma, 61%; Nebraska, 54%; Saskatchewan, Canada, 150%; Alberta, Canada, 150%; Manitoba, Canada, 150%.

We are shipping over 150 cars a day.

In spite of that, we are over 5000 cars behind our "immediate shipping orders."

If *you* are in the market for a car *examine this Overland at once.*

It costs 30% less than any other similar car made, and in most cases is bigger, better made, more powerful, more comfortable, more serviceable and more completely equipped than any of the average $1200 cars manufactured.

There is an Overland dealer near you. Look him up and ask to see this car—the best buy in America. Catalogue on request to the factory. Please address Dept. 80.

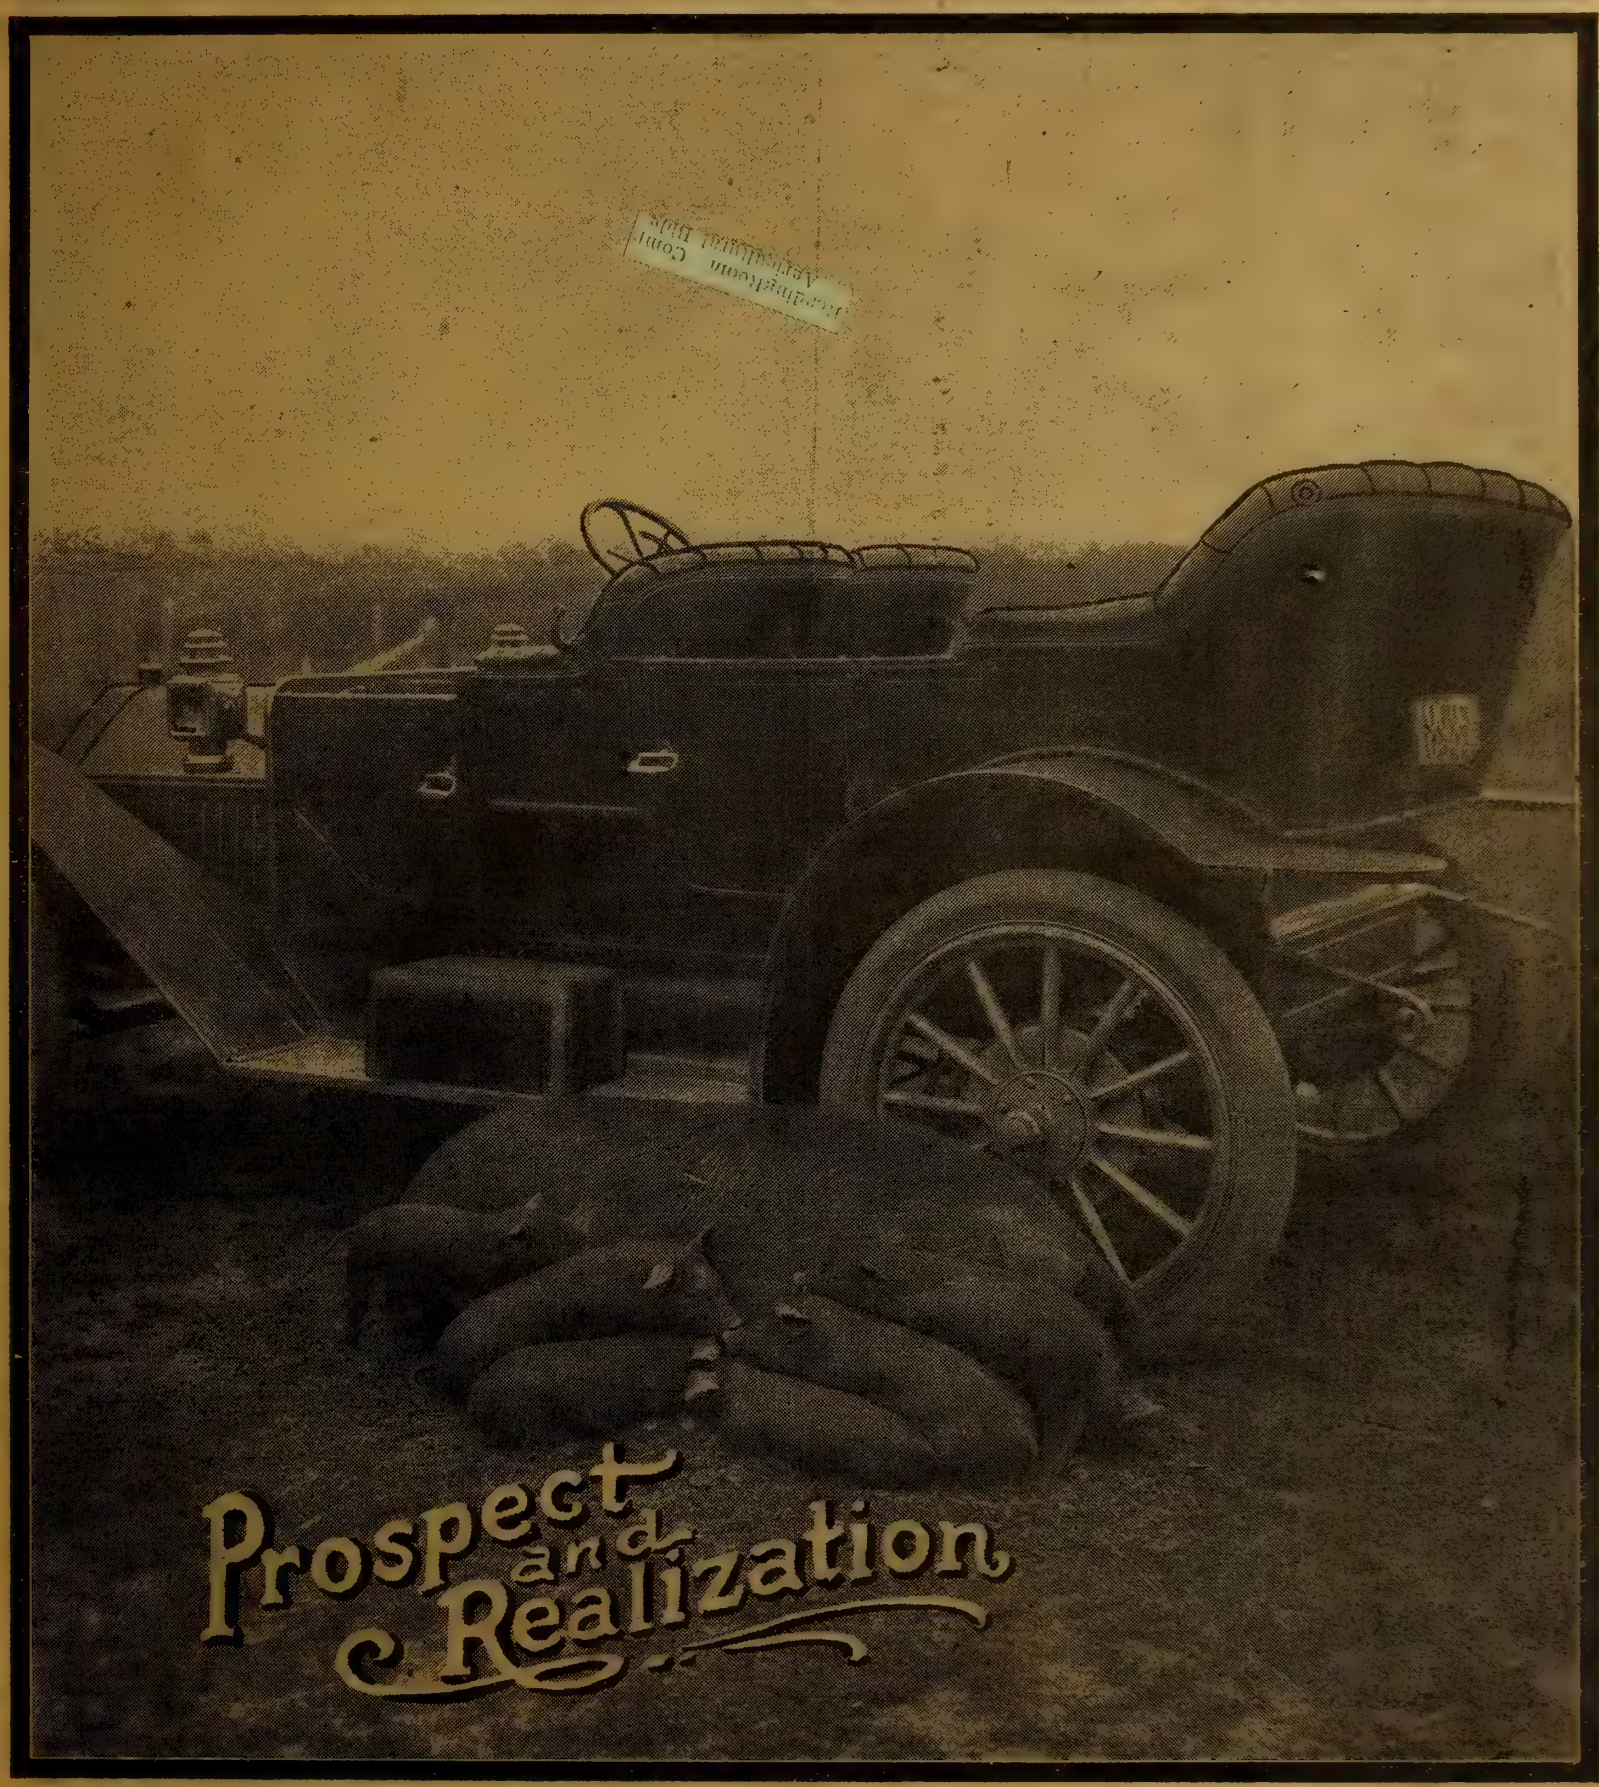
VOL. LVIII. NO. 17 DES MOINES, IOWA, APRIL 24, 1913. WHOLE NO. 2898



Safety at Harvest Time

ALL your work leads up to the harvest. At that point you plan to coin the season's labor.

Are you ready for the harvest? Are your machines all in good working order? If there is any doubt, now is the time to look into your machine shed and see.

It is far better to buy a new machine before harvest than after. Get your new machine with the I H C trade-mark and with one of these time-tried names on it—

Champion Deering
McCormick Milwaukee
Osborne Plano

Any one of these will save delays and insure a speedy harvest without loss of grain.

Now is the time to look over your equipment. If it takes a new machine, order now. Nothing is gained by waiting till the last minute when you cannot expect the service you can command now.

Remember the dealer can give you more time now. The machine you buy now has been made before the rush. You are safer with the machine at home properly set up early than hauling it home after the grain is ready to cut.

If repairs are needed, order them now. If your dealer does not have what you need, he will be able to secure it in time so that you can put it on at your leisure.

Be sure you get I H C repairs and not imitations. The I H C repair part is made the same as the original on your machine except that it is strengthened if found necessary.

Buy your twine early, then you will be safe against a possible shortage. Better have a few balls extra than not enough. You can always use it.

Buy **Champion, Deering, McCormick, Milwaukee, Osborne, Plano,** or **International**—Sisal, Standard, Manila, or Pure Manila twine—and know that it will work satisfactorily in your binder.

The best is always the cheapest in binder twine as in machines.

Captain Anson used to say, "It is good playing at critical moments that wins ball games." The harvest is the critical moment of the year for you. Play safe on all points by equipping your farm with I H C harvesting and haying machines and binder twine. Catalogues and full information are yours for the asking.

Let GALLOWAY Save

Your Wash Day Worries With This Wonderful Hand and Power Washer

No. 1 Washer with Wringer $15

No. 2 Washer complete with Wringer $17.50

Turns drudgery into delight

"Let me Send You my Great WASHER for a 30 Day Home TRIAL."

Don't Be Tied to a Tub!

With the Galloway Washing Outfit shown above you can turn work into play. No more back-breaking, health destroying drudgery now. A ten year old girl can easily run it by hand and quickly handle a big family wash. But the best way is the power combination shown in picture. So simple and easy to operate that you can't go wrong. If you already have an engine all you need is this washer. If you haven't, by all means get my complete outfit. **I'll send it for 30, 60 or even 90 days' free trial. If you decide not to keep it, back it comes at my expense—you won't be out a penny.**

1,000 Other Big Bargains

My Big General Line Catalog shows everything for home, farm and family at actual bed-rock factory prices. Let Galloway save you money! Write for this Complete Buying Guide today. **A postal brings it free.** Don't fail to get your copy.

Combination Prices

If you purchase the Galloway Improved Washer with Engine and Truck as shown in illustration, we will furnish a sufficient amount of **Belt Free** and ship it with the machine. The engine is the regular Galloway and there is nothing on the market to equal it for pumping or running any kind of light machines.

	ENGINE WITH TRUCK 1¾ H.P. Air Cooled	1¾ H.P. Water Cooled	2¼ H.P. Water Cooled
No. 1 Washer Complete (belt free).....	$49.75	$57.50	$63.50
No. 2 Washer Complete (belt free).....	52.25	60.00	66.00

NOTE—In case you wish the outfit without truck, just deduct from above prices $5.00 if engine is 1¾ h. p. size, or $6.00 if engine is 2¼ h. p. size. (321)

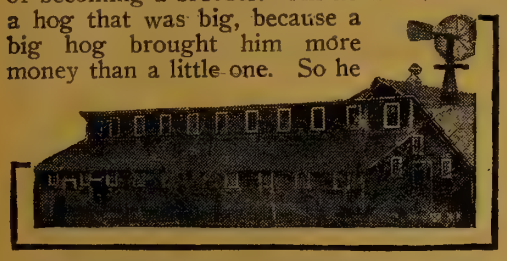
A Man of Original Ideas Who Makes Them Win Out

Success That Follows Persistence

Rewards That Came to a Hog Raiser Who Knew What He Wanted and Persisted Until He Produced It---Original Thought and Action That Won Out in Spite of Fads and Fashions.

STUDYING methods of swine breeding furnishes illustrations of successes gained by persistent work along a single line. A case in point is that of Peter Mouw, a farmer of Sioux county, Iowa. Mr. Mouw was a genuine wooden-shoe Hollander who came to America when quite a young lad with nothing to his credit but indomitable energy and determination to "get on." And he did. He landed forty years ago. Four years later found him settled on raw prairie—now the improved home farm on which his real life work has been done. Three more years and he bought a Poland China hog, thus beginning a career that has made him famous over the entire hog-raising world.

Peter had no lofty ambitions in the way of becoming a breeder. All he wanted was a hog that was big, because a big hog brought him more money than a little one. So he



HOG HOUSE AND FARROWING PENS.

bought big hogs, raised big hogs, and sold big hogs. He did this year in and year out. If some enthusiast tried to sell Peter a hog that carried blood of a popular strain, he would be told, "I want him bigger." If a show-ring favorite came under his observation, Peter was apt to repeat, "I want him bigger." At a period when breeders' fancy ran wild on fine points, style, tippy ears and fine white markings, Peter stood out alone, demanding all the time, "I want him bigger."

In 1892 Peter took some of his big ones to the Iowa State Fair and carried home with him a fine blue ribbon on Molly King, and that same old Molly King became the ancestor of a line of breeding that has since attained to the greatest distinction. In the show ring jealous competitors frequently contested the ages of animals Peter drove into the competitions because he "got him bigger" than they had been able to do. But that did not stop Peter. He went back the next year and won first, second and third, and since that the herd has been in the running at nearly every fair.

How did he do it? He started right. He

SUBSTANTIAL AND COMFORTABLE FARM HOME.

did not believe in breeding hogs of a kind he did not want in order to get those of the kind he did want. He thought the way to raise big hogs was to use as breeding animals those that were big.

About the time Peter began to learn lessons in hog raising, Poland China men were quite evenly divided as to the predominancy of merit of the Corwins and

BIG NEW CATTLE BARN AND SILO.

Tecumseh strains. The Corwins which came under his observation were large and deep bodied, with a mellowness that goes with quick growth and early maturing qualities. Prominent among the sires of the time were Jumbo and Old Doctor. The seven gilts which constituted Mr. Mouw's first start were the immediate descendants of those two animals, and both carried strong infusions of Corwin blood. A few years later the Corwin strain, through the influence of Black U. S. and Ideal Lady, began to deteriorate in size and then Mr. Mouw turned to the Tecumsehs, which have been prominent factors in his later operations. His first hog of that strain was Grand Chief Jr., a grandson of Chief Tecumseh 2d. Later came Chief Standard, of almost the same lines of blood, and still later other sires of strong Tecumseh breed-

PAVILION WHERE HOG SALES ARE HELD.

ing. Only those who are conversant with Poland China history will appreciate the wisdom of the selections made.

But blood is not all, and no other man in the same line of work has so well demonstrated that feed and care produce wonderful results. There is never any lack of feed on the Mouw farm. Like the family larder, the cribs and granaries are at all times filled to overflowing with the things that go to make flesh and develop animal form. And it is mostly that which has been grown on the farm. The Mouw farm is a factory which turns its raw materials into a finished product of a quality that brings the highest market price. Native thrift and simplicity rule on the Mouw farm. While a liberal system of feeding is employed, everything is practical and without frill or fad.

The notable point in the career of Mr. Mouw is the fact that by adhering strictly to his own idea of the form and characteristics of a profitable hog, by following his own plans of growing and breeding, and with no promotion other than persistence of effort, he has made his ideal hog one that has grown into public favor to al-

A LASTING WOOD.

Various means are being used by the timber interests of the South to bring to the attention of the farmers of the corn belt the remarkable lasting qualities of certain southern woods, particularly cypress. Timber of this character is found in commercial quantities in ten or eleven southern states of which there is standing at the present time approximately 20,000,000,000 feet.

The bald cypress is a slow-growing tree, requiring about two centuries for it to reach sufficient size to use commercially. According to a report made by timber experts of the United States Department of Agriculture, William L. Hall and H. Maxwell, heart cypress shingles have been known to last for a period of 250 years. Many buildings constructed of this wood more than a century ago are yet in a good state of preservation. According to these experts cypress is well adapted to a very large number of uses. As the wood contains but little resin it affords a good surface for paint and it finishes well either in natural color or when stained. Because of this its use in the construction of doors, window frames, transoms, ceilings, etc., is rapidly increasing. As it shrinks and swells but little it furnishes a most satisfactory wood to use in kitchens and pantries. As a siding material for houses it practically wears out before it decays. Cypress timber has been thoroughly tried out in farm uses and it has been found admirably adapted to the purpose when used as material in water troughs, stable floors, gates, fence posts and in addition for timbers that come in contact with the ground.

As we see it the more extended use of this southern timber will do much to stop the rapid depreciation of wooden structures. This in itself has been a heavy burden to corn-belt farmers in the past because of the short life of much of the wood that has been used. To reshingle a farm building every eight or ten years means an outlay which is not offset by any corresponding revenue. It is a mistake to think that "lumber is lumber" and that woods are all alike except that some boards contain more knots than others. As a matter of fact all lumber is not alike, even when covered with paint.

If the report of these government experts is to be relied on the increased use of cypress means a much greater degree of permanence in the future as applied to farm structures than has been the case in the past. In constructing sun parlors, as siding for homes, for interior use, for porches as well as for outbuildings, stable floors, tanks and a great variety of other uses this southern wood meets the most urgent need of the times due to its widely adaptable character and almost everlasting qualities.

THE SILO AND PROFITS IN BEEF-MAKING.

According to results obtained at the Indiana Experiment Station the addition of corn silage once daily to a ration of shelled corn, cottonseed meal, and clover hay, reduced the cost $1.83 for each hundred pounds of gain and increased the total profit $8.85 per steer.

The addition of corn silage twice daily to a ration of shelled corn, cottonseed meal, and clover hay, reduced the cost $3.17 for each hundred pounds of gain and increased total profits $11.19 per steer.

The substitution of corn silage for clover hay in a ration of shelled corn, cottonseed meal and clover hay reduced the cost $4.35 for each hundred pounds of gain and increased the profits $17.97 per steer.

The more nearly corn silage replaces the clover hay in the ration, the cheaper was the gain and the greater the profit.

Corn silage produced a very rapid finish on the cattle.

The silage used in this trial contained an unusually high per cent of dry matter and was, judging from previous experience, more efficient for fattening cattle than silage containing a higher per cent of moisture.

A ration of shelled corn, cottonseed meal, oat straw, and corn silage (twice daily) proved to be as efficient for fattening cattle as a ration of shelled corn cottonseed meal, clover hay and corn silage (twice daily).

CO-OPERATION IN INSECT DESTRUCTION.

The Illinois Experiment Station calls attention to the fact that the time has arrived when farmers must act together, or at least, act alike, if they are expected to control the depredations of certain insects. The individual acting alone cannot always protect his crops unless his neighbors also will do the right thing at the right time.

The corn-root aphis is given by Prof. S. A. Forbes as an excellent illustration of this principle. This pest may be virtually exterminated in any field in which it has been previously injurious by persistence in the use of measures to be taken in the early spring. Corn may be planted on this ground and kept practically free from early and immediate injury from it. If, however, the root louse is allowed to live and multiply in other fields near by it is sure to migrate on the wing into the field previously free from it, thus undoing, in a large measure, all that the careful man may have done to protect himself.

This insect produces many generations in the same season and a considerable number of each generation after the first are likely to develop wings, hence the necessity of more united efforts to keep the insect absolutely in check.

In those territories infested with root lice Professor Forbes recommends plowing to a depth of from six to seven inches. Repeated disking afterwards results in breaking up the nests of the root lice and the young ants with which they are so closely associated. The result of this procedure means that the eggs of the root aphis are so scattered that the ants cannot bring them together again and so much the better if, before planting, the ground can be packed down with a roller. The earlier the plowing can be done the more effectually will the insect be controlled.

Attention is called to the fact that thorough, deep preparation of the ground for corn will, if kept up year after year, not only exterminate the root louse, but many other corn insects will be gradually destroyed. One field near Galesburg, Illinois, that was plowed deeply and thoroughly disked afterwards yielded twenty-eight bushels per acre more than a similar tract that was prepared in the ordinary way. From this it will be seen that the methods of shallow culture in the spring that were formerly in vogue might have to be discarded and deeper plowing introduced in order to save the crop from the devastations of certain types of insects. Where whole communities are infested Professor Forbes is of the opinion that the results will more than justify farmers in adopting a uniform deep tillage system—deep tillage in this instance referring wholly to the work put on the ground previous to planting time.

SWINE IN THE UNITED STATES.

According to the estimates of the bureau of statistics of the United States Department of Agriculture there were 61,178,000 head of hogs in the United States on the first of January, 1913. The states which lead in numbers are Iowa 8,720,000, Illinois 4,314,000, Missouri 4,978,000, Nebraska 3,798,000, Indiana 3,709,000, Ohio 3,399,000, Kansas 2,611,000, Texas 2,493,000, Wisconsin 2,030,000. No other state reached the two million figure. Rhode Island stands at the foot of the list with 14,000 head. The total shows a decrease of 6½ per cent from the figures of the previous year.

The total valuation is put at $603,109,000 and the average price per head $9.86. There is rather wide variation on this point in the different states. Curiously enough the highest price, $14.50, is in Rhode Island, where fewest hogs are kept. Florida stands at the foot of the list, with a valuation of $5.90 per head. Iowa hogs are valued at $12 per head, or a total of $104,640,000. The total values given for other principal hog-raising states are Illinois $45,308,000, Nebraska $43,297,000, Ohio $36,709,000, Indiana $36,348,000, Missouri $34,740,000, Kansas $27,154,000, Wisconsin $23,548,000, Minnesota $21,615,000, Texas $20,941,000.

The average age at which hogs are marketed the country over is eleven months. In Louisiana it extends to fifteen months. In the principal hog-raising states the market age ranges from nine to ten months.

During the year ending January 1, 1913, the number of hogs marketed at the seven principal stock yards markets was 20,293,924 head, or more than one-half million less than in the preceding year. It is said that the loss from disease during 1912 amounted to $60,000,000.

The hogs of the United States consumed 724,000,000 bushels of corn, or 26.8 per cent of the entire crop.

LIVE STOCK FARMING THE NEED

The day of strictly intensive farming being "a long ways off in this country," President Waters, of the Kansas State Agricultural College, believes that the start toward adding to the farm income is found in live stock farming, with mixed farming following in close companionship.

Addressing the state bankers' association, at Topeka, a few days ago President Waters gave these striking figures in showing the comparative value of grain farming and live stock farming:

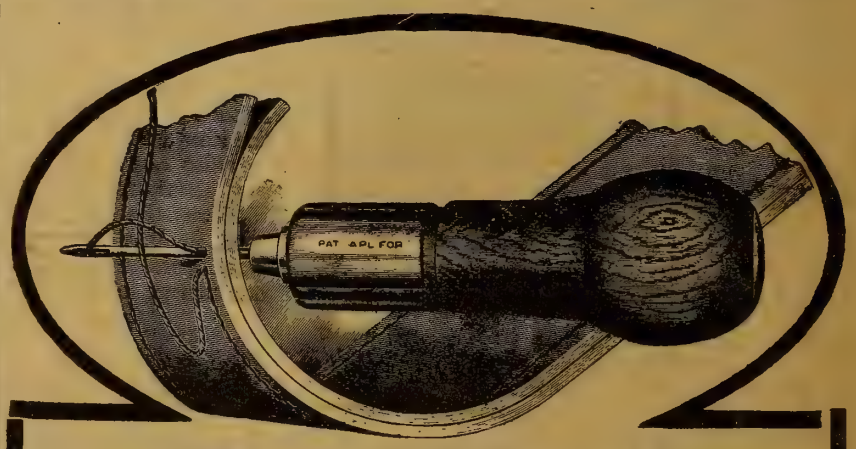
Live stock farming is more profitable than grain and hay farming in every section of the United States. The United States census shows that the average income from grain and hay farms for a ten-year period was $7.72. The return an acre on live stock farming was $11.42, or 48 per cent more. The one system depletes the soil, the other builds it up. The future of western Kansas in particular must be based upon mixed farming with its principal element, live stock, supported by kaffir, milo, the sorghums and the silo.

The farmer is more interested, just at present, added President Waters, in the details of marketing what he produces than in producing more. It is costing too much to get the farm produce to the consumer, so that the imminent need is for wiping out the waste and cutting down the intermediate profits of the middleman, so that the farmer will receive more for what he produces. The fact that an address so purely agricultural in its character was delivered before the state bankers' association shows the interest which the banker of today is taking in the problems and welfare of the farmer.

ESTABLISHING CHOLERA-PROOF AREAS.

The Kansas Agricultural college proposes to demonstrate that hog cholera can absolutely be stamped out. It is the intention to select 200 farms in a given territory and treat every individual of the hog population. Agreement must be entered into by every farmer in this area to have his hogs tested whether they seem to him to need it or not and he must pay for the material used in testing. These farms will cover a strip about seven miles long and four miles wide and the hope is that even the work of one season will demonstrate beyond any possibility of doubt that hog cholera can be prevented.

It would be rather interesting if every state in the corn belt could join Kansas and carry on a similar line of investigation at the same time. While



MEND YOUR HARNESS WITH

The SPEEDY STITCHER

I WANT every reader of my paper to have one of my Speedy Stitchers **Absolutely Free.**

The Speedy Stitcher is the latest invention and the most effective of anything in the form of an Automatic Sewing Awl ever offered. Its simplicity makes it a thoroughly practical tool for any and all kinds of repair work, even in the hands of the most unskilled. With this Awl you can mend harness, shoes, tents, awnings, pulley belts, carpets, saddles, suit cases, or any heavy material.

The Speedy Stitcher is provided with a set of diamond pointed grooved needles including a special needle for tapping shoes. It also contains a large bobbin from which the thread feeds, all of which are enclosed inside the handle out of the way. This Awl has a tension which enables you to tighten your stitch. These valuable features you will not find in any $1.00 Awl.

It's FREE to Those Who Are Prompt.

I will give one of these excellent Speedy Stitchers absolutely free to any one who will send me $1.00 for one year's subscription to The Homestead during the month of April. This offer will positively be withdrawn on May 1, 1913. Kindly use the coupon below and be sure to send your order in today before you forget it.

no up-to-date man questions the efficacy of good serum, yet the wisdom of using it indiscriminately, particularly in connection with virus, is in many cases questioned. If cholera can be kept out of a strip four miles wide and seven miles long it ought to be possible to enlarge that area until it includes a state and to further enlarge it until it embodies the entire hog-raising territory.

In this day and age when co-operation is the watchword of the hour it would seem advisable to have a little co-operative effort on the part of states in order that an important principle like this might be settled one way or the other for all time by the concerted action of state scientists.

DANGER LURKS IN WATER.

Farmers traveling on trains who find themselves inconvenienced through failure to provide themselves with individual drinking cups may occasionally feel as though the law prohibiting the common drinking cup were freakish. But the fact is that there is great danger of spreading infectious, filthy and even deadly diseases by the indiscriminate use of common drinking vessels. Scientists have proved that the spread of contagious diseases is often due to nothing more nor less than the public drinking cup and the public towel, so that any law which conserves public health, by removing the agency of disease, is commendable. It is sometimes a nuisance to remember to provide one's self with an individual cup before leaving home and it is sometimes impossible to secure the necessary cup away from home, but it is better thus than to be a party to inflicting diseases on innocent persons.

The state board of health of Kansas has recently gone a step further and is investigating the ice with which the water in public drinking receptacles is cooled. As a result, an order has been issued providing that on and after the first of July all railroads in that state must put water tanks in their cars in such fashion that the ice does not touch the water. Tests have been made, showing that only one-third of the water furnished in the average passenger coach is fit to drink, one-third being possibly dangerous and one-third absolutely dangerous to human health. We are indebted to a subscriber for sending us the following information in regard to these railroad tests:

The chemists of the state university took seventy-eight samples of the water on the trains at Kansas City and Wichita. Of those twenty-seven were found to be sufficiently clean for drinking purposes while the rest were found to contain enough bacteria to be classed as unfit and more than twenty of the samples were found to contain typhoid fever germs and other germs in sufficient quantities to be set down as absolutely dangerous.

In one case water taken from the sand springs at Abilene, the finest water in Kansas, was found to be dangerous for human consumption by the time it reached Kansas City. Then came the investigation of t e ice and the tests showed that the careless handling of the ice, dirt blowing on it, dirt on the gloves or tongs used by the handlers and on station platforms, caused the contamination.

The good work thus begun in Kansas should be carried on in other states. Ice is a ready carrier of filth and dirt and its unsanitary handling may cost human life. It is far better to be inconvenienced and even to go thirsty for a time than to pollute one's system with germs of disease which may cost much money if not human life itself. Farmers who go far from home should be thoughtful enough to provide themselves with drinking cups. Kansas proposes to take care of those who thus take care of themselves.

THE WEATHER BUREAU.

The summary dismissal of Professor Moore, chief of the weather bureau for the past fifteen years, should not blind the eyes of the farmers to the fact that under his chieftancy the bureau has become of inestimable value to the man whose welfare and prosperity are dependent in such large measure upon the weather. Daily weather bulletins, frost and storm warnings and a systematic forecast service place the farmer in close touch with the nearest weather forecaster and make it possible for him to take advantage of market conditions created by the weather or to prepare for a sudden change which, were it to catch him unawares, would cost him heavily. A recent bulletin of the agricultural department sums the matter up in this manner:

Over 5,000,000 farmers receive the weather forecasts daily over the rural telephone, the forecasts being telegraphed by the weather bureau to the central offices and thence distributed free to all patrons of the line, most companies being anxious to furnish this service as an inducement to new subscribers. If a farmer has a telephone and does not receive the daily weather forecasts, he should call up central and find out why.

Warnings of the destructive floods that occurred in Ohio, beginning March 25th were telegraphed from the weather bureau office at Columbus to all the principal cities and towns in the districts threatened from twelve to twenty hours in advance. The river and flood service of the weather bureau covers every river in the United States where floods, dangerous to life and property, are liable to occur. Persons residing in threatened districts should put themselves in communication with the nearest weather bureau station.

During April and May the weather bureau will put itself in close touch with all the principal commercial fruit-growing regions of the country where damaging frosts are liable to occur and issue advance warnings of temperatures liable to prove destructive to fruit so that, wherever practicable, the various devices for orchard heating and smudging may be put in operation. In some regions, not adjacent to regular weather bureau stations, men are sent out to take station in the vicinity in order to insure the effectual distribution of the warnings. Fruit growers everywhere should avail themselves of this service.

The weather bureau and its allied organizations in the department of agriculture have grown so scientific and thorough that the question of chieftancy is far from being material. The service will be continued unimpaired, regardless of personnel. In fact, the recent change of administration has shown that the various departments of the federal government are now in such smooth running order that it makes but little difference when the heads are removed or shifted. Under the civil service laws the men who really do the work in the weather bureau, as elsewhere in most governmental departments, are retained regardless of politics.

STEALING FOR A LIVING.

Little pigs generally act as if this were a free-for-all world and to them self-interest is the only interest that is worth while. Their policy in many instances is not favorable to their owner's welfare and where many pigs are raised systematic efforts must be made to keep the pigs from one litter from robbing another litter of their just rights.

In some strains prolificacy is a very marked characteristic and it frequently happens that a sow will farrow ten, eleven or twelve good, strong pigs. Our observation is that when the litter is too large robbing is generally first contracted by the pigs from such litters and we know more than one successful breeder who never allows an old sow to raise more than ten pigs and a gilt more than eight. One starving little pig can often corrupt the morals of his litter mates and to prevent this it is often a very good practice to do away with the runts there and then.

In some cases it will pay and pay well to keep a sow and her pigs in a little yard by themselves for two or three weeks. When the udder is uniform so that all the pigs in a litter are coming along in good shape there is very little danger of developing vices after that age because the pigs know their dam and even when turned loose they seldom become robbers. If a few are allowed to steal the practice soon becomes indiscriminate and a very uneven bunch of shoats will result.

We realize fully the importance of getting sows out to grass in order to cut down the labor of attending to them and in order that they may get for themselves nature's best food, but nevertheless, as the suckling period only lasts ten or twelve weeks it will pay and pay well to watch the development of this robbing vice and to prevent it in every instance. Many are the evils that come from the habit and among these will be found the development of sore mouths, noses and heads among the little fellows which is due to the warfare that is carried on. In the second place the sows' udders are apt to become irritated and the next trouble that will show up will be that the sow will naturally wean the pigs. This will occur even though her own litter may not be more than two or three weeks old and this means possibly that her pigs will not be worth raising.

Woven wire fence is not expensive and it takes only a small amount of labor to restrain those litters that show signs of developing this vice. One very successful swine breeder of our acquaintance keeps all his little pigs in a yard for a period of three weeks, after which they are allowed to run at large, though the sows are restrained until weaning time. He has found that each little pig soon learns the location of its own pen and they will seldom, if ever, wander into strange quarters. While there is the disadvantage in this plan of not allowing the sow access to grass, yet if plenty of milk-making foods are used and a part of these are fed in the form of slop, the loss of the grass may not amount to so much after all.

CROP CONSERVATION IMPORTANT.

In an address recently delivered before the Western Grain Dealers' Association, Prof. A. M. TenEyck, of the Iowa Agricultural College, pointed out the necessity of placing relatively more emphasis on sensibly conserving a crop after it is produced and on marketing it than on that of production. As the secretary of agriculture says: "The farmer's problem is not limited to production, we must promote productivity; but fully as important if not more important are the questions of marketing and distributing and living."

A real conservation principle may be complied with, according to Professor TenEyck, by adopting better methods of handling and storing grain on the farm. Much grain is wasted in quantity and unnecessarily injured in quality by improper or careless handling after harvesting. The farmer who is a good producer is too often a poor handler of the crop after it is grown. Sometimes his methods of handling the crop from the field to the elevator are not only careless, but show absolute neglect. For instance in a part of our grain growing country we have observed the custom which the farmers practice almost uniformly of leaving the grain in the field in the shock until they are ready to thresh. While the climate of this area is generally favorable to such a method of handling the grain, it is not always so and some seasons the grain is very badly injured by excessive rains before it reaches the thresher. If farmers would adopt the method of stacking the grain in well-made stacks as soon as it is dry enough, they would in a series of seasons make a good investment by this extra labor, yet the old custom continues.

The majority of farmers, however, know how to handle their crop, but are prevented by unfavorable weather or by insufficient and inefficient labor, or other conditions which they cannot overcome. Also, the grain dealer is in part at fault. The neglect of the crop, especially as regards quality, is encouraged by him because he usually gives too little consideration to the point of quality in grain, in fixing the purchase price.

Pure yellow and pure white corn are generally quoted at one to three cents higher price per bushel on the Chicago market than corn of mixed color, yet the grain buyer often pays only one price at the elevator, the price of mixed corn, thus giving no inducement to the farmer to keep his corn pure bred.

"Community seed" is the next step forward in crop improvement, according to this scientist. There is no standard or authorized variety of any crop which is accepted and generally grown by farmers in one locality or neighborhood. The present condition is unsatisfactory and should be changed. In fact, there is no reasonable excuse for the present condition. Let the farmers organize and adopt or recommend for planting certain varieties of corn and small grain such as are shown to be adapted to the local conditions and let the grain dealers co-operate by paying a slightly advanced price for pure grain of these varieties which are adopted or recommended. If any community will put such a plan into operation it will not take long to establish the growing of preferred varieties in such community. The grain dealer should make it to the advantage of the farmer to seed corn of pure color and small grain of high grade by paying a higher price for such grain, and advertise the fact.

Grain dealers and many others are prone to give the farmers a great deal of free advice. Such advice does not amount to much unless it is backed by dollars. What we need today is example and practice. Secretary Houston says again, "We are clutter d up with knowledge, we must get out and set it to work on the farm."

SLOPPING HOGS ON PASTURE.

While it is possible to find men who have obtained satisfactory results in hog raising in feeding dry feed only, yet the average man believes that he can make more rapid and cheaper gains if he uses a little slop. A pretty well-defined notion exists that one good meal of slop a day tends to aid in the digestion of all other foods consumed and this may be due to the fact that in consuming slop the hog is obliged to take more water into the system than would otherwise be the case. An Illinois subscriber who believes in the practice of using slop describes his method of feeding it in the following communication:

When large and small hogs are running together, how to slop them so that each one will get its share is a problem that often confronts the owner. As slopping is commonly done a man is about knocked over by the sows and pigs and the big, greedy animals gobble the food down before the rest get a chance at it. This is neither pleasant for the feeder nor satisfactory to the hogs, except to the few lucky ones that capture most of the prize. Some way of slopping should be devised whereby the feeder will not be molested, and whereby the big and small alike will get their share.

One of the most satisfactory methods of slopping I have ever used or seen used, calls for a space about one rod wide and two or three rods long, fenced off for this purpose. This is divided into two parts, one division being used for the sows, the other for small pigs. Each is fitted with a gate, which should be large and swing easy, in order that the hogs may pass through it in large number without too much crowding. Across the gate posts of the part the pigs are to use a board should be nailed, high enough to let the pigs pass through it, but not high enough for the sows.

With such an arrangement the slopping can be easily and satisfactorily done. The feeder can pass into the lot, close the gate and fill the troughs without the sows scrambling all around him. When the trough is full the gate is opened and the sows are let in together. Under such circumstances both large and small animals get an equal chance at the feed, provided the trough is of reasonable length, whereas when the slop is turned in pailful by pailful while the animals crowd around it is always the big ones that get the feed.

The little pigs are quick to discover that they have a place of their own to eat, fitted out with troughs to suit their size and capacity, and they will rush there when the meal time comes in preference to being crowded and squeezed and pushed back by their mothers. It may, at first, be necessary to drive a few pigs into the yard, but the knowledge never fails to spread quickly or to become fixed. There is probably no way in which the sows and pigs can be slopped more satisfactorily to all concerned than by these separate inclosures.

In conclusion I wish to state that for every hundredweight of small pig, from ten to fifteen pounds of liquid should be mixed with the feed every day. Either water or milk may constitute the bulk of the liquid, but if milk is used less other feed is necessary than if water is the dilutant. As the pig becomes older less liquid is needed with the feed. His digestive system develops in strength, and his absorptive powers become greater. The content of his body changes, there being ever more dry matter and less water present. For these reasons he requires less liquid. A mature hog probably requires only two to four pounds of water per hundredweight per day.

To this good advice a word might be added in regard to the necessity of using some kind of flooring where the troughs are located. A concrete feeding floor is possibly the most ideal and where many hogs are raised the expense involved in constructing such a floor is a justifiable one. However, a very good feeding ground can be made either by the use of gravel or cinders, providing the surface is well rounded up in the first place to afford good drainage. Drainage, however, is not enough to prevent the contamination of troughs in the absence of some sort of surfacing material.

Put three horses on the so-called "two-horse disk," and four horses on the "three-horse disk." You'll do better work, more of it in a day, and be treating your horses more humane.

Farm Furrows
TURNED BY A PRACTICAL FARMER

Try putting some sheep on the rough, untillable land, and watch it pay you immense dividends from the start.

Most farms could be made much neater in appearance and considerable value added to their buildings and fences by the use of the paint brush about this time of the year. How about your own farm?

Have things all ship-shape around the poultry yard; so the hens will be bringing in the profits from their eggs while you are making the field crops pay.

I like to have plenty of rough feed to carry the stock through until grass is good. The most trying time on stock is now here, and the better the feed the better the stock stand it.

These are the days when the unwise farmer damages his meadow lands by pasturing, crossing them with heavy loads, especially when the wagon is narrow tired, and allowing the washes to cut great ditches in them, carrying away his surface and best soil.

Scrubby brush about the pasture-lands shade the grass and kill it out, when they should be cut and hauled into some damaging ditch somewhere about the farm.

Have an eye for the small fruit. It is easily tended to and harvested, and by careful handling at canning time, it will greatly assist in cutting down the living expenses. It is more conducive to good health, too, than so much greasy meats, gravies, etc.

You must help the hog lift by giving him good care and feed, if he is to be a mortgage lifter.

Notice the effects of fall plowing, done by you or some of the neighbors last autumn. Since it works up easier, forms a more ideal seed bed for any and all kinds of planting, is easier kept free of weeds, and will prove of great value in the conservation of soil moisture, you surely will be in favor of trying fall plowing again this fall.

The buying of a single piece of $25 machinery may aid you $100 worth in the production of your crop.

We put an old door knob in the turkey nest when taking the egg from her nest. She is very sensitive about having all of her eggs taken away and none returned, and is very apt to seek out another location for a nest if one persists in robbing it without leaving anything resembling an egg there. If you risk good eggs for nest-eggs, the crows are almost sure to get them.

Cobs make manure unhandy to handle. Have a barrel in front of the stalls to toss the cobs in at feed time.

One good reason for continuing to feed the dairy cows a small quantity of grains and roughages after they can turn to pasture is that the animals' teeth get sore (or rather, their gums), and by supplying the solider feeds the teeth will be kept in better condition for chewing and grazing the grass.

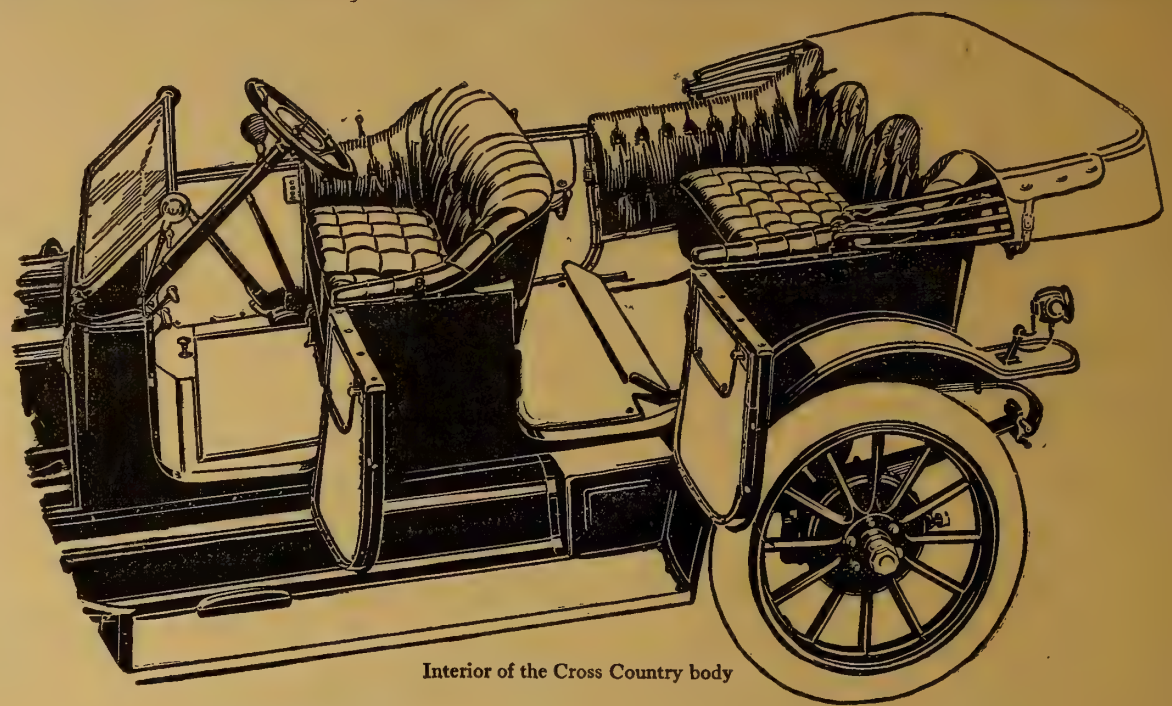
The failure or success of many farmers depends very much on whether they always are grumbling at their hard "luck," or whether they prefix the letter "P" to it and tack their faith to that word—"Pluck!"

Hook up the team when the summer evening is rainy and stormy, and go after the school children. It is not only dangerous for them to be out in an electrical storm, but it is most disagreeable, especially for the girls, to trudge home through the mud and wet grass.

"Book farming" is O. K. only when actual experience backs up the theoretical conclusions of the methods advocated.

A pair of pure-bred pigs at $50 when six months old, looks high priced, but did you ever notice that there always someone to buy just such stock?

Step into This Car and you will know Real Comfort



Interior of the Cross Country body

THERE is something rare and inviting about the comfort of the Cross Country that once it is experienced you will never quite forget. You enter through wide doors—20½ inches—that open fully, stepping easily from a running board that is clear.

The broad, carpet-covered foot rest in the tonneau is in just the right position for thorough relaxation. You sink down into the deep upholstery and lean back to find the pitch just right for perfect ease. The steady, deliberate action of the springs gives to one that pleasurable sense of modulated motion undisturbed by any jar. The forward seats are just the right height and the steering pillar may be adjusted at any angle to suit the comfort of the operator.

The hands rest comfortably on the steering wheel and the foot accelerator is so conveniently located and shaped that pressure may be applied with any part of the foot, always avoiding a cramped position.

You must experience the feel of the Cross Country wheel. It's a delight. It turns without a single vibrating jar. Your arms don't tire, your legs don't cramp.

To drive this car is exhilarating. Press the button with your foot. With hardly an audible sound the motor starts. A single movement of the lever—you touch the throttle and it's away.

Drive the car for ten minutes and you will grin in spite of yourself through rare delight.

Interior of Cross Country forward compartment

A beautiful four-color reproduction of the Cross Country, from an oil painting by R. Phillip Brainard, is ready for mailing. See the Cross Country by all means at any Jeffery branch or dealer's display room, but send for the picture anyway.

CURRENT EVENTS

PRESIDENT WILSON has been successful in his first clash with congress. He has been supported by the lower house in his demands for a gradual reduction of the tariff on sugar, while the upper house has practically consented to abide by his free wool and ultimate free-sugar propositions. The president's plan is not for an immediate removal of all duty upon sugar, which Congressman Underwood, the democratic leader of the house, admits "would put the domestic planter out of business," but for a gradual reduction for the next three years, with an entire removal of all duty in 1916. By this plan the president believes that the consumer will be able to buy his sugar cheaper each year, while the change will not be so sudden and revolutionary as to drive the sugar planter out of business, three years' time being given him in which to devote his land to other crops and his capital to other industries. On free wool, as soon as congress can pass the necessary bill, the president is pretty thoroughly agreed and it begins to look as though both houses of congress would be guided by what he wishes. The president's visit to congress, his delivery of his tariff message in person and his frequent consultation with prominent leaders have resulted in a working agreement which bids fair to enact the democratic tariff program without much loss of time or break in party ranks. The present session of congress will be protracted and there will probably be many bitter disputes over the various tariff schedules, but the outlook is for the success of President Wilson's tariff plans practically as a whole.

PERSISTENT efforts to put cattle and sheep on the free list, to cut the duty on swine and otherwise to alter the ways and means committee tariff-revision bill have been defeated by the democratic caucus of the house. The effort to put cattle on the free list precipitated the longest and most strenuous discussion of the caucus. Cattle and sheep now are dutiable at 10 per cent and swine at $1.50 per head. Led by one of the new democratic members from Pennsylvania an effort was made to amend the committee's bill (the one which meets with the approval of President Wilson and which has been worked over for some months past), but the effort was futile. Representative Baker, of California, Representative Russell, of Missouri, and others urged against free cattle, declaring that it would destroy the cattle-raising industry in their states. Representatives Kinkead, of New Jersey, and Curley, of Massachusetts, contended free cattle would mean a broader field of supply for the independent packers as against the so-called trust. Representative Curley declared that the United States might soon cease to be an exporter of food. He said the Argentine republic with a population of only 9,000,000 as against 92,000,000 in the United States, exported more than five times as much beef and meat products as the United States and that tariff protection in America could only benefit the "trust." Representative Garner, of Texas, a member of the ways and means committee, said cattle last year raised a tariff revenue of $1,200,000, that the rate had been so adjusted in this bill that it would raise $500,000 the first year. If the cattle were transferred to the free list, he added, the rest of the tariff would have to be adjusted to meet the loss of revenue. After a prolonged discussion the free cattle amendment was defeated by a vote of 122 to seventy-three.

WILLIS L. MOORE, chief of the weather bureau since 1895, has been summarily dismissed by President Wilson on the charge of having used his office and influence unduly in an effort to secure appointment as secretary of agriculture in the president's cabinet. Professor Moore had filed his resignation, to take effect July 31st, and President Wilson had accepted it, but on receipt of evidence bearing on the charges made against him, President Wilson withdrew his acceptance of the Moore resignation and dismissed him from the service. It is claimed that Professor Moore sent weather bureau officials traveling over the country, ostensibly on official business, but in reality to lobby for his appointment to the cabinet, and that he spent large sums of government money in printing and sending out literature designed to influence support in his behalf for the cabinet position. The house committee on expenditures in the agricultural department has been planning for some time to investigate conditions in the weather bureau, but because of the press of other matters has not reached it yet. It is highly probable that the Moore disclosures will bring the matter to a head and that an investigation will now be made which will be a sweeping one.

UNEASY lies the head that wears a crown, runs the old adage, the truth of which has been repeatedly proven. Within the past month two European monarchs have been the victims, King George of Greece losing his life and King Alfonso of Spain having a narrow escape. The latter was riding on the streets of Barcelona when the assassin seized his horse's bridle and prepared to shoot point-blank at the king. With quick presence of mind Alfonso sank the spurs into his horse, which jumped suddenly, so that the shot went wild. Two more shots were fired before the assassin was overcome by the king's guards. There is no monarch in Europe, with the possible exception of the czar of Russia, whose life has been more frequently attempted than Alfonso of Spain. On the day of his wedding, as he and his bride were driving to the palace from the church, a bomb was thrown at him, hidden in a bouquet of flowers, the explosion resulting in the death of a servant and ten of the spectators, while one of the horses of the royal carriage was blown to pieces. A half dozen times altogether the king's life has been attempted, so that he has known but little peace during his reign. In addition to all this trouble, the second son of the king is deaf and dumb, so that the royal family has its full share of troubles, even more than the average poor family.

ONE of the greatest labor strikes in history is now in progress in Belgium. Belgium has a very reprehensible system in vogue by which the number of votes to which a man is entitled is dependent upon his age and wealth. Thus, every citizen over twenty-five years old has one vote; every citizen over thirty-five years old, with one or more children and paying $1 or more in house tax, has two votes, as has also every citizen over twenty-five years of age who owns at least $400 worth of real estate; every citizen who is an office holder, or an ex-officio member of some board, or who owns a larger amount of property, is entitled to three votes, the maximum number allowed any citizen. At the last general election the number of voters was 1,700,000, of which 995,000 had one vote, 395,000 two votes and 310,000 three votes. The present strike was caused by the socialist and industrial labor elements which hope by stopping almost every industry in the country to compel the government to grant them universal manhood suffrage, which means only one vote for every man. Altogether between 300,000 and 400,000 men are out on strike, affecting all the great industries of the nation. It is the first time that a labor strike has been used for purely political purposes. There is no question of hours or of wages, but merely the right of the poor man to have as much of a voice in running the country as the rich man.

Don't allow the hogs to sleep in or around the stable stalls—unless you want fleas in the barn.

NEW LAWS FOR IOWA FARMERS

A Lengthy Session of the Legislature Passes a Large Number of Laws of Direct Interest to the Farmer—Roads, Drainage, Public Schools, State Fair and Equally Important Subjects Occupy Lawmakers' Attention

THE Iowa legislature which adjourned Saturday was in session a little over three months and accomplished a vast amount of work. It is doubtful if any session of recent years has been confronted by more big problems than faced the members of the Thirty-fifth general assembly when they met at the state house on January 13th. Some of these problems have not been solved, but all have been discussed pro and con. Some of the things to which the various political parties pledged themselves in their platforms have not been enacted into laws. But many reforms, which the people were practically a unit in demanding, have been brought about and, for the most part, the legislators have gone about their duty in a conscientious and patriotic spirit.

Before getting down to the list of achievements in which the farmer takes a personally direct interest it is well to recount briefly a few of the big things which affect every voter in the state, whether he live in the country or in the city.

First: The legislature passed a presidential preferential law, giving to Iowa the same right to vote directly for presidential delegates as was enjoyed last year by Massachusetts, California and other states, but which was denied to Iowa, although the people were almost a unit in demanding the privilege of the party leaders.

Second: The legislature passed the Oregon senatorial law, providing for legislative candidates declaring, in advance of election, who they will support for United States senator in the event they are elected. The fact that the necessary number of states have ratified the federal constitutional amendment, so that hereafter all senators will be elected directly by the people, makes the new Iowa law unnecessary, but the legislature met the situation patriotically before it knew that its action would not be needed.

Third: For the first time in history a legislature has gone on record favoring woman suffrage, both houses passing the bill proposing to give women the right of the ballot. Should the next legislature take similar action, the matter will then be voted upon by the male electors of the state, after which, if the proposition carries, Iowa will be enrolled among the woman suffrage states.

Fourth: Another constitutional amendment was proposed, that of the initiative and the referendum. If the next legislature and the people at the subsequent general election decide in a similar manner the legislature will have power to fix the percentage of voters demanded to initiate or to refer legislation. This percentage must be fixed between twelve and twenty-two per cent to initiate a change and between ten and twenty per cent to refer matters passed by the legislature.

All these things affect the welfare and prosperity of the state as a whole, without regard to the vocation or the avocation of its citizens. They are big matters, met in a big way, and by adopting them Iowa shows itself entitled to remain in the vanguard of the really progressive states.

There are other big matters directly appealing to the farmer, because they touch his life intimately and will be met by him in his daily work and contact with other farmers. Those laws which thus have a special appeal and significance to the farmer will be found outlined herewith as briefly as possible, yet at sufficient length to give the real working of the new statutes.

INTEREST centers in the road legislation which, while not so far-reaching as might have been wished, still is an advance over former statutes. The main bill passed was the one creating a state highway commission of three members, appointed by Governor Clarke as follows: Dean A. Marston, of the state college of agriculture at Ames, H. C. Beard, of Mt. Ayr, and John Holden, of Scranton, Greene county. In addition to the creation of this state commission the main features of the new law are as follows: It provides for the classification of roads; the county roads, of a mileage not less than ten nor more than 15 per cent of the whole, "to be the main traveled roads of the county and must connect the market places of the county as well as connect with the county roads in adjoining counties."

The law places in the hands of the supervisors power to appoint a county engineer and select the roads for improvement, the surveys and reports of each division to be submitted to the highway commission for its approval before the work is ordered; all culvert and bridge work estimated to cost more than $300 to be advertised and let by contract (unless the bids are rejected when it may be let privately or done by day labor); all bridge or culvert contracts in excess of $2,000 to be approved by the state highway commission. The state highway commission is to have the power to investigate conditions in any county "and should it appear that any officer upon whom duties are by this act imposed has violated such duty, said commission shall report such investigation to the attorney-general who shall take such steps as are deemed advisable by him to correct the same." Another law diverts 8 per cent of the automobile license fees for maintenance of the state highway commission.

SCHOOL laws were passed which can hardly fail to advance the educational interests of the state. Several important changes in school administration were made. One law provides that the state superintendent of public instruction shall be appointed by the governor, instead of elected by the people. Another law provides that the county superintendent of schools, instead of being elected for two years by the people, shall be elected for three years by representatives of the various school corporations of the county who shall meet the first Tuesday in April for this purpose, it not being necessary for the county superintendent to be a resident of the county in which he is elected. Another law provides that normal training courses (with particular attention being paid to agriculture and domestic science) may be established in any Iowa high school which meets the requirements of the department of public instruction, each school so designated to receive aid from the state to the amount of $750 annually. For this purpose the legislature made an appropriation of $100,000 for the first year, with $125,000 a year provided thereafter. Still another law provides state aid to consolidated schools having suitable grounds and necessary equipment for teaching agriculture, home economics, manual training, or other industrial and vocational subjects, as may be approved by the department of public instruction. The sum of $30,000 was set aside for the first year, and $50,000 for each succeeding year for a period of four years. Districts maintaining two rooms will receive $250 toward equipment, and $200 annually. Those maintaining three rooms, $350 toward equipment and $500 annually; four rooms or more $500 toward equipment and $750 annually. Another law requires the teaching of elementary agriculture, domestic science and manual training in the public schools after January 1, 1915. Another new law gives to school boards power to buy additional grounds for the purpose of providing playgrounds. On petition of 20 per cent of the property owners in a district the question of buying grounds shall be submitted at a regular election. When people have voted and a tax is ordered directors are required to proceed and purchase grounds. Teachers' salaries are the subject of another school law, minimum pay being established. A teacher who has a third grade certificate will receive from $32.50 to $38.50 per month, according to her grade. A second grade certificate, 75 to 85 per cent grade, will receive $41.25 to $48.40 and a first grade certificate $51.00 to $60.00 per month. It is a misdemeanor for any school board hereafter to hire school teachers at any less rate of salary. Altogether, on the all-important educational question, it is doubtful if any legislature has ever enacted more or better school laws. The general assembly had the advantage of the findings of the Better Iowa Schools Commission, most of the recommendations of which were enacted into laws at Des Moines this session.

THE sum of $35,000 was appropriated for the establishment of a hog cholera serum laboratory at Ames, the director to be appointed by the president of the state agricultural college, the serum to be manufactured and distributed under the direction of the authorities of the college. The serum is to be sold at actual cost to swine breeders inside the state and none is to be sold outside the state unless the supply exceeds the demands from within the state. Two bills were introduced, one calling for a $25,000 appropriation; the other for $50,000; one providing for the establishment of the laboratory at Des Moines, the work to be under the supervision of the state veterinarian; the other placing the work at Ames under the direction of the state college authorities. The closing week of the session a compromise appropriation of $35,000 was agreed upon, the work to be carried on at Ames.

AFTER much discussion of the management of the state fair, the legislature completely exonerated the fair board and declared that it was conducting affairs in a business-like and altogether honorable manner. It then passed a law compelling the railroads of the state to grant round trip rates of one and one-half cents a mile (three cents for the round trip) for the fair, which will go a long ways toward making the attendance bigger in 1913 than ever before. The law makes it obligatory upon the railroads to grant these reduced rates to any annual fair the paid attendance of which is in excess of 75,000 so that it will apply as well to the Inter-state fair at Sioux City as to the state fair at Des Moines. In addition, an appropriation of $75,000 was made for a woman's building on the state fair grounds, an improvement that has long been needed. Future baby health contests will be held in the new building, which will be equipped with all conveniences for the comfort of women visitors and at the same time will show the wonderful progress of the sex in artistic matters as well as practical.

THE following rules for the operation of automobiles upon the public highway are of interest to farmers, because of the fact that so many thousands of motor cars in Iowa are farm owned:

THINGS TO DO.

Turn to the right when meeting other vehicles and in cities and towns keep on right hand side of street as near curb as possible.

Turn to the left when passing another vehicle.

Signal to traffic officer or vehicle following when about to turn or stop.

When turning to right, turn as near right hand corner as possible.

When turning to left, pass to right of corner and beyond center before turning.

In crossing highway turn to left so as to head in direction of traffic.

THINGS FORBIDDEN.

To stop vehicle unless right hand side is parallel with curb and as near thereto as possible.

To pass other vehicles at street intersections.

To operate without muffler.

To allow vehicles to be driven by person less than fifteen years old.

To leave vehicle standing within twenty feet of corner or fire hydrant.

To leave vehicle standing within fifteen feet of theater entrance.

To leave vehicle standing with engine running.

OTHER RULES.

Vehicles turning to right shall have right of way over traffic on street into which they are turning.

Vehicles turning to left shall give right of way to traffic on streets into which they are turning.

THE present law governing stallions and jacks has been revised so as to apply as follows: Stallions and jacks imported must have certificate of soundness and good health from veterinary department of state from which they come and railroads are forbidden to bring animals into the state without such certificate. (Exception is made of stallions and jacks brought to the state purely for exhibition purposes.) Provides for examination of stallions and jacks by duly registered and licensed veterinarian to determine whether animal has any communicable disease or is otherwise unsound. Veterinarians to make affidavit of condition of stallion or jack and said affidavit must be filed with state board of agriculture, which will issue permit without charge. On imported animals a temporary permit may be issued on certificate from veterinary department of another state, said permit good for thirty days until pedigree may be filed and local laws complied with. A fee of $1 is authorized annually as charge for state certificate for stallions and jacks. Blind stallions and jacks may be given certificate provided it is shown their blindness was not due to communicable disease.

IN THE matter of appropriations for the state agricultural college at Ames, the legislature was most generous, providing for a tax of one-half mill, in addition to an appropriation of $92,000 immediately available. The half-mill tax is to be expended as follows each year, beginning with 1914:

Additional support of collegiate departments	$125,000
Agricultural extension	48,000
Agricultural experiment station (Of this not more than $35,000 may be used for an additional experiment farm.)	57,000
Agricultural one year and two year noncollegiate courses	12,500
Trade school and engineering extension work	25,000
Engineering experiment station	5,000
Veterinary practitioners' course	5,000
Veterinary investigations	10,000
Repair and contingent fund	10,000
Two and four year courses in home economics for homemakers and teachers	20,000
Equipment of departments and buildings	40,000
Maintenance and improvement of public grounds	10,000
Enlargement of buildings and small additional buildings	10,000

A NEW weed law was passed, which provides for individual cutting of all noxious weeds. The law says that it shall be the duty of each owner, occupant or person in control of any land, whether it be in the country or in the city, to cut, burn or otherwise entirely destroy all noxious weeds at a time and in a manner to prevent them blooming or coming to maturity. Should this be neglected, the county board of supervisors is authorized to serve written notice of such failure upon the owner, occupant or person in control of the land and if, after thirty days' notice, the weeds are not cut the county will order the work done and the cost will be taxed up against the land as a special assessment.

FOR the purpose of promoting both the dairy cattle and the beef cattle industries in the state $7,500 was appropriated to the Iowa State Dairy Association and $7,500 to the Iowa Beef Cattle Breeders' Association to be expended for improving the quality of stock raised in this state and carrying on a propaganda to interest farmers generally in live stock possibilities. The money is to be expended under the direction of the officers of the associations, which are required to have 500 members each.

IT IS unlawful hereafter for any person to bring or cause to be brought into the state any apiary or honey bees infected with foul brood or any other infectious diseases or bee-destroying insects. No common carrier shall accept any colonies

(Continued on page 32.)

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LAW QUESTIONS CONSIDERED.

SALE OF STOCK IN CORPORATION—LIABILITY.

A Subscriber, Leigh, Neb.—An agent came into the neighborhood offering for sale shares of stock in a certain incorporated company, which was then and is now in operation and doing a comparatively good business. A bought one share of the stock from the agent and went about the neighborhood with him and introduced him to B, C, D, E and F, each one of whom bought one share of stock from the agent. In case the shares of stock should turn out to be worthless, can A be held responsible, and if so, to what extent?

Answer.—If A merely introduced the agent to the other parties, and made no false statements as to the shares of stock or their value, he cannot be held responsible, even though the shares should afterwards be found to be worthless.

LAME RENTING CONTRACT.

A Subscriber, Orient, Iowa.—(1) I rented a piece of land and agreed to a rent to the owner one-half of the corn raised in the field and cash rent for the hay land, and agreed to give the owner the fall feed. Nothing was said about the time of giving possession. When do I get possession? (2) A rented this land last year and the owner pastured stock on it after the first of March, during wet weather when the ground was muddy, which greatly injured the fields. Am I entitled to damages?

Answer.—(1) If the parties to the contract do not know when possession was to be given, it is rather difficult for the editor of this department to know. We should say, however, that, as the land, or part of it, was to be used for a corn crop, the first of March would be a reasonable time for the tenant to take possession—at any rate he should be given possession in time to prepare the ground for planting corn. (2) In view of the loose and uncertain manner of making the contract, it is doubtful whether or not you could recover damages by law, for pasturing the land.

TRANSFER OF PROPERTY—INHERITANCE TAX.

A Subscriber, Moravia, Iowa.—(1) Is the last inheritance tax law of Iowa in the code or in the supplement thereto and later acts? (2) A and B are husband and wife and own a small farm and wish to leave it to their children. They have made deeds of the land to their children; that is, a deed to each child for a certain portion of the land. These deeds have been signed and acknowledged by both A and B and delivered to another person to be given to the children upon the death of A and B. Is that legal and right? (3) Would the inheritance tax law apply in such a case?

Answer.—(1) The collateral inheritance tax law of Iowa now in force can be found in session laws of 1911, pages 50-64. (2) Deeds so made and delivered will accomplish the purpose desired. (3) In such a case the inheritance law does not apply; property which passes by deed or will to children is exempt from the inheritance tax.

AUTO AND BUGGY ACCIDENT—DAMAGES.

A Subscriber, Perkins, Iowa.—A and his wife were going to town with a horse and buggy when they met B driving an auto at a speed of about twenty miles an hour. A turned out when about to pass and so did B with the auto. A's horse became unmanageable with fright and suddenly turned in the road and upset the buggy throwing A and his wife out and injuring both of them. B is a careful auto driver, but was unable to stop his machine in time to avoid the accident. Can A recover damages from B?

Answer.—If the accident was caused by reason of the careless or negligent manner in which B was driving his auto at the time, or his failure to stop on A's signal, or his want of caution in passing the horse and buggy. A can recover damages from him for all injuries resulting from the accident; in other words, in a suit for damages, A would have to convince the court or jury that the injuries were caused by some fault of B.

IMPLIED CONTRACT FOR WAGES.

A Subscriber, Huxley, Iowa.—Without any contract or agreement whatever A entered B's premises and began to work at useful work. B saw A at work and made no objection to it. When A quit he demanded that B pay him fair wages for his work. Can A recover from B by law?

Answer.—The only legal ground upon which A could recover wages for his work would be a contract implied from the facts that B saw A at work, made no objection, and that the work was useful. It is barely possible that A could recover wages by law; but his case is very weak, and our opinion is that he could not recover. The facts stated do not seem sufficient to prove an implied contract.

Use It Every Day

Have a tractor on your farm that will shove your work right through, a tractor that will work with profit day and night. The

RUMELY GASPULL

15-30 h.p.

will go almost anywhere—power behind it—it pulls up to 6 bottoms in stubble—harrows, discs, hauls, bales and makes roads.

It's handy, easy to run and of light weight. It does the work of a dozen horses—goes where a single team can go and brings money back with it.

It will pay you to see this tractor—you can use it every day in the year.

Get my Big FREE BOOK OF BUGGY BARGAINS

I WILL be glad to pay the postage on it. It is not the biggest book issued, but it is by far the **most complete catalog** of vehicles and harness ever issued. It illustrates from actual photographs a **complete line** of up-to-the-minute Buggies and harness, and quotes **prices lower** than you can get anywhere else for the same grade of goods.

I can't sell a good Buggy for $30, nor can anybody else. But I can sell you—**direct from the factory**—a high-grade vehicle which I will **absolutely guarantee** under bond for two years, at a **saving of $25 to $50** or more over what you pay for a similar Buggy from your dealer. **Price for price** I'll put my Buggies **against any Buggies** in the world, and I will back them **to the limit** with my guarantee under bond to **refund every cent** you pay me, and to pay the **freight both ways,** if any Buggy I ship you is not exactly as my catalog states.

My 1913 LEADER $54.50

All the brains and skill of the most expert workmen are combined with the highest grade materials money can buy, in turning out this Buggy. It's a job I'm proud of—and you'll be proud to own it. I'll stake my reputation on it and am ready to ship it anywhere on

30 Days' Road Trial Free With 2-Year Guarantee

Now send for my book—even if you don't expect to buy a Buggy this year. Just send your name and address on a post-card—TO-DAY.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

TERMS WHICH EVERY POULTRYMAN SHOULD UNDERSTAND.

To the Editor of The Homestead:

My wholesale egg buyers have given me the meaning of the following terms relating to the egg trade, the condition of eggs, etc., and it seems to me they are so important that farmers generally should know their meaning, so as to improve the quality of the eggs they send to market, for the price you receive is governed largely by little details, little defects in the eggs or in the handling and shipping, which are too often not looked after as carefully as they should be.

It is a truism that success in any business is the result of close attention to small details, and certainly it is so in the egg business, for while a good egg is very good, a bad one is very, very bad, and even a tolerably good egg is, after all, not very good. Perhaps no other article produced on farms and sold in stores is so easily injured in quality and decreases in market value as a shipment of eggs of unfavorable indications and that, too, although the quality of the eggs' contents might be good, despite appearances. The real value and the market value of a shipment of eggs might vary greatly because in no other commodity produced on farms is so much importance attached to appearances.

Farmers should therefore use especial care to see that eggs have an attractive appearance, and they should know what lessens their market value.

"Candling" is the process of testing eggs by holding them between the eye and a candle or other bright light, so as to determine the condition of their contents.

"Checks" are eggs which are cracked, but not leaking. These have a low market value.

"Leakers" are cracked eggs which have lost a part of their contents. These also have some market value if you ship to honest dealers, if too much of the eggs' contents is not wasted.

"Dirties" are eggs soiled with earth, droppings or the contents of broken eggs. My wholesalers tell me that not one egg-shipping farmer in a hundred seems to realize how dirty eggs decrease the market value of this product although the eggs may be fresh and their contents strictly good.

"Blood rings" are eggs in which blood has developed, extending to the period when the chick becomes visible.

"Floats, light," are eggs in which embryo development has proceeded to a point corresponding to about eighteen to twenty-four hours of normal incubation. They are not readily detected by the casual observer even when broken.

"Floats, heavy," are eggs in which the development has proceeded farther than in the case of light floats. When broken the yolk has a white, scummy appearance.

"Rots" are eggs absolutely unfit for food purposes.

"Spots" are eggs in which bacteria or a mold growth has developed locally and caused the formation of a lumpy adhesion on the inside of the shell.

"Watery eggs" are those in which the inner membane of the air cell is ruptured, allowing the air to escape into the contents of the eggs, giving it a watery or frothy appearance. My dealers tell me that the sound condition of this membrane just inside the shell of eggs is much more important than poultrymen realize.

"Weak eggs" are those in which, by reason of unfavorable conditions, or of age, the stiffness or viscosity of the egg is lessened, producing an egg which doesn't stand up well or whip into a firm froth.

"Case count" is a term used in egg buying where eggs are accepted simply on the basis of number, without regard to quality.

"Loss off" is a term used in buying where eggs are tested by candling before being accepted. The bad eggs, usually the "rots" and badly broken eggs, are rejected and no pay is received for them. All honest dealers prefer that poultrymen and farmers should candle eggs before shipping to market, and ship only those which prove to be good. Put your thumb and first finger around the egg, with the large end towards you, and look through the egg at a bright light.

"Seconds" is a term often used when eggs are bought on a graded basis to designate the second best grade.

"Firsts" are strictly fresh eggs of good quality, clean, of attractive appearance and of uniform color, size and shape. Large eggs are preferred, of course, but clean appearance and uniformity of size, color and shape is of more importance than large size.

"Flats" are the squares of strawboard placed between layers of eggs in the egg case.

It is the universal opinion of egg dealers and packing houses who put eggs in cold storage that if they are of poor quality when they come out of cold storage the farmers and poultrymen are to blame; that is, that eggs deteriorate much more in quality from the time they are laid until they are brought in and sold by farmers than they do after reaching the wholesalers' hands. After reaching the cold storage people they are handled promptly and in a scientific manner, and if good when they go into cold storage they come out in good condition.

I. H. Motes.

MISSING IT WITH POULTRY.

To the Editor of The Homestead:

One place where we make a mistake with poultry is in not growing just as much of the food we use as we can. There are poultrymen, some of them right out in the country, too, that buy a good share of what they feed their hens. Their grain, their vegetables, their milk, if they use any at all, all these things are bought and paid for at a good big price.

That takes off the profit, and takes it off fast. It brings the expense of producing eggs and poultry meat so

TELLS WHY CHICKS DIE

J. C. Reefer, the poultry expert, of 1630 Main St., Kansas City, Mo., is giving away free a valuable book entitled "White Diarrhoea and How to Cure It." This wonderful book contains some new scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. Everyone interested in poultry should certainly write Mr. Reefer for one of these valuable Free books.

EGGS from stock scoring 94 to 96, $1.50 to $3.00 per 15; $6 per 100. Geo. W. Livingston, Monroe, Ia.

dangerously near the selling mark that there is little left for profit. I know of a number, just as I write, who are actually keeping poultry at a loss. That takes the pleasure all out of it, and leads so many to drop the business and say there is no money in it.

What these folks need to do is not to give up in discouragement and disappointment, but to set about growing more of the feed used. That is what the farm is for, is it not? We should expect it to raise enough of everything to feed every living creature that has its home upon it.

Again, we do not always realize that we are keeping too many hens. Not all of us like to confess that. We think somebody else keeps more than we do and they seem to make it pay. The fact is, we are always learners, and while we may have sufficient experience to warrant our keeping a limited number of hens, it does not follow that we can make a much larger flock pay.

So we crowd our houses—one of the worst things we could possibly do. We are not as careful as we should be about keeping the houses clean and we feed with little eye to the needs of the flock or the cost of production, as compared with the selling price.

I know a good woman who has a fine flock of well-bred hens, but they cost her more for keep than she gets out of them, although she gets a good big price for the eggs she sells. She has to buy everything, she does not know how to feed and care for the birds, it costs her too much for hired help, and it is a losing business with her. What she ought to do is to get a little land somewhere on which she might grow part at least of the feed she uses. She needs to cut down the bills for help, doing more herself, and she needs to grow up with her business.

There are many all over the country who are doing just what this good woman is, and that is why so many poultry plants will be dead and done for in a few years. The business is all right; the folks behind it are not running it just right, that is all.

E. L. Vincent.

And now it is going the rounds that incubator hatched chickens have 2 per cent less mineral matter than those hatched by a hen. Well, maybe, but I can show you a flock, the direct result of ten succeeding generations artificially, that are big, vigorous, all above standard weight, and—well, they don't seem to care anything about the alleged 2 per cent loss on the mineral question.—J. C.

POINTERS

—J. M. Poole, Bristow, Iowa, has an advertisement elsewhere in this department offering White Orpington eggs for sale.

—The Black Langshan egg advertisement of Mrs. J. H. Trimmer, Anita, Iowa, appears elsewhere in this department.

—Mrs. E. Millard, Earlville, Iowa, is offering Mammoth Bronze turkey eggs for sale in her advertisement appearing elsewhere in this department.

—The advertisement of Mrs. L. A. Catlin, Roseville, Ill., offering Black Langshan eggs for sale from scored stock appears elsewhere in this department.

—Wm. H. Laipple, Geneva, Iowa, offers Barred Plymouth Rock eggs for sale at reasonable prices in his advertisement found elsewhere in this department.

—Eggs from full-blooded, prize-winning Barred Plymouth Rocks are offered for sale by John Peterson, Randall, Iowa, in his advertisement appearing elsewhere in this department.

—Bert A. Randell, Mt. Zion, Iowa, guarantees satisfaction to those who buy from him Black Langshan and Indian Runner duck eggs. Prices are named in his advertisement elsewhere in this department.

—In furnishing copy for his new advertisement appearing elsewhere in this department, Steve L. Morlan, Plano, Iowa, writes: "I have sold all the eggs I can spare from my twenty-eight and thirty-pound Mammoth Bronze turkey hens. I can fill orders, however, on short notice from my twenty-six-pound hens and pullets. My eggs are guaranteed to hatch and my prices are very reasonable."

—In furnishing copy for his advertisement found elsewhere in this department, L. A. Crull, Muscatine, Iowa, writes: "I have a nice flock of large, healthy White Plymouth Rock hens that are of a heavy winter-laying strain. The cockerels are all high-scoring birds, sired by the winner of the first prize winner at the Muscatine Poultry Show. The cock bird in my flock won second at the same show. I

Ancona Cockerels $2 to $5. Chicks and eggs in season. Send stamp for folder. Order early. Geo. W. Harris, R. 3, Shelby, Ohio.

believe that I am offering good stock at a reasonable price."

—Buff Orpington eggs are advertised by W. E. Zimmerman, Neola, Iowa, at $1.50 per fifteen or $6 per 100 on this page.

—Frank G. Myers, Iowa City, Iowa, has an advertisement elsewhere in this department offering eggs from Single Comb White Orpingtons and White Wyandottes for sale, he writes: "My birds are scored and are extra good layers."

—Mrs. Madison Spencer, Audubon, Iowa, has two pens and a range flock of Barred Plymouth Rocks from which she can supply Homestead readers with eggs at reasonable prices. Her advertisement appears elsewhere in this department.

—Mrs. L. C. Reese, Prescott, Iowa, advertises Barred Plymouth Rock eggs and baby chicks from her noted prize-winning stock in her advertisement found elsewhere in this department. Write for her free circular telling all about her flock.

—"My Single Comb Brown Leghorns," writes Nellie Cahow, Greenfield, Iowa, "are healthy and vigorous and have won blue ribbons wherever shown. My hens weigh from four to five pounds." Her advertisement appears elsewhere in this department.

—"My White Wyandotte eggs are testing high in fertility and chicks are strong and vigorous," writes Mrs. N. W. Burbank, New Sharon, Iowa, in furnishing copy for advertisement appearing elsewhere in this department. She also writes that she has a fine laying strain of good color and size.

—L. G. Johnson, Steamboat Rock, Iowa, reports splendid hatches from his Single Comb Rhode Island Red eggs. All his birds have liberal grass range and lay all the year around. They are a deep velvety red color. All orders sent him will have his best attention. His advertisement appears elsewhere in this department.

—The advertisement of A. J. Arends, Blairsburg, Iowa, offering eggs from Blue Andalusians, Silver Spangled Hamburgs and Barred Plymouth Rocks will be found elsewhere in this department of The Homestead. Mr. Arends writes that he has a picked flock and has nothing but first-class birds in the pens from which he will sell eggs.

—Mrs. L. H. Davidson, Algona, Iowa, advises us that the males at the head of her flock of Wyandottes are all solid buff. Her fowls have farm range, and she guarantees eggs to be reasonably fertile, and carefully packed for shipment. Her prices are within reach of all. See advertisement elsewhere in this department, write her and mention The Homestead.

—"My stock," writes Miss Julia Drescoll, Plainfield, Iowa, whose advertisement offering Silver Laced Wyandotte eggs for sale appears elsewhere in this department, "is on farm range from twelve to fifteen eggs per setting proving fertile. I have a good laying strain. Will give all orders prompt attention. Eggs will be strictly fresh and well packed."

—Will Rasmusson, Nevada, Iowa, has a heavy-laying, white egg strain of Fawn and White Indian Runner ducks, from which he is offering eggs for sale in his advertisement elsewhere in this department. The eggs are from prize-winning stock. All stock not up to standard requirements in marketing or are undesirable in any way are carefully culled out. He adds new blood each season and makes a specialty of this variety.

—Mrs. G. W. Shaw, Monroe, Iowa, has an advertisement elsewhere in this department offering White Plymouth Rock and Fawn and White Runner ducks eggs for sale. Se writes: "I am prepared to furnish Homestead readers with choice White Plymouth Rock eggs. I have a fine flock of pullets and hens selected from 400 and headed by cockerels scoring 93 to 94½. Orders for eggs will be carefully filled and as prompt as possible."

—J. M. Rahn & Son, Clarinda, Iowa, in sending copy for their pure-white Runner and Buff Orpington duck advertisement that appears elsewhere in this department, write: "Our birds were winners at Buffalo, Boston, Los Angeles, Omaha, Topeka, Des Moines, Sioux City, St. Joe, Clarinda and a number of other shows. We have many winners of the blue ribbon in our breeding pens and we offer to Homestead readers eggs from all of them. Reports on chicken eggs have been from eleven to fourteen chicks from fifteen eggs. Duck eggs are also hatching well. We want all Homestead readers to send for one of our catalogs. It will be sent free if they will just drop us a postal."

—Earl Bloom, Bridgewater, Iowa, announces in the proper division of this paper that he is now prepared to furnish eggs for hatching to those who are interested in pure Bradley Barred Plymouth Rocks or Single Comb Brown Leghorns. He has an excellent breeding pen of Brown Leghorns headed by cockerels scoring 92 to 93½ points. The range flock of the same breeding are also good birds. Prices quoted in the advertisement are unusually reasonable. In Barred Plymouth Rocks he has two pens for cockerel mating, two pens for pullet mating and a farm range flock. Mr. Bloom has printed a neat little pamphlet giving full details as to the importance of the matings of his Plymouth Rocks. This book may be had without cost by writing to the address above named and it really should be in the hands of those contemplating the purchase of Plymouth Rocks. Kindly mention this paper when writing him.

DUCKS.

EDUCATION FOR ALL.

Edwin G. Cooley, former superintendent of the Chicago public schools, addressed a joint session of the Iowa house and senate in the house chamber recently on vocational education. Mr. Cooley has made an exhaustive study of this branch of education in Europe.

Mr. Cooley said that the problem was to interest and educate the 90 per cent of the boys and girls who have not been able to take advantage of the present educational system.

Lester Ward says: "Each age of the world's history stands on a platform erected by all past ages. It is true that all members of society use to a certain extent of the products of past achievements, but in no other sense do those members stand on the elevated platform who do not actually possess the heritage of the past. Now, as a matter of fact, it is only the intelligent classes who really possess what I have called this heritage."

The results of the mediations and investigations of past ages form an inheritance for the whole human race. Some of this inheritance does inevitably filter down through and reach the lower strata of society, but much remains practically the inheritance of the few who have the time and the means to enter into their inheritance through education of various sorts, including that of the schools. Many do not avail themselves of opportunities to share in this inheritance on account of lack of time, lack of means and lack of inclination for serious study, due to a failure to appreciate the value of this inheritance; many on account of actual inability, mental, moral or economical.

The whole human race is interested, however, in the equitable distribution of this inheritance, as its greatest benefits result from its general distribution, rather than from its monopolization by the few. Knowledge is power, but it is social power only when society generally is in possession of it. When confined to a few it may be a social curse, as the monopolization of material wealth often is. Society is sound to the core only when all parts are equitably nourished from this common fund and no organ, however humble, is starved into weakness and inefficiency.

This conception of society as an organism does not presuppose that all its members will be able to utilize these opportunities to the same extent or in the same way, but it does presuppose that all have an access to this common fund of the race long enough to enable them to get the substance they require for their healthy development and to enable them to perform their functions efficiently. Society, as a whole, must provide such opportunity for all its members as a means of self-preservation.

This means, as a practical proposition, that access to this common inheritance must not be closed to 90 per cent of our children when they are barely fourteen years of age, just at the time when they most need guidance and instruction, just at the time when character building really begins, and just when they should be objects of special attention in our educational plans. Whether the youth appreciates the need of further education or not is not the question. Society must appreciate it and provide for it by extending the compulsory period of education to cover the years of development between fourteen and eighteen even for those compelled to devote most of their time and energy to bread winning. One of the blunders of civilized countries a blunder that has led to an enormous increase in the number of youthful vagabonds and criminals,has been to neglect the child and to act as though there were a sharply defined line separating the child from the man; as though it were a wise educational policy to care for him systematically up to fourteen and then leave him abruptly and absolutely to the tender mercies of the factory and street.

The problem of legislation is, therefore, to provide a system of schools which shall give opportunity to all our youth during the years of development between fourteen and eighteen, during the years of adolescence. A small per cent of our youth do now continue school in high schools and colleges until maturity and later, sometimes too long for their own and their country's good, as they postpone their entrance into vocational life until their power of adaption begins to wane and their success in practical life is imperiled. Our problem is to extend the opportunities for vocational education to all during this adolescent period, a problem which we cannot longer defer if we hope to conserve our human resources and to hold our place in the van of civilized nations.

These schools should be administered with the distinct purpose of developing personal efficiency in the vocation, and through efficiency and joy in work to develop social efficiency—to train the man and the citizen. They should cover the period between fourteen and eighteen, be compulsory in the daytime, free, practical and covering all kinds of vocational activity.

A system of vocational schools should include voluntary continuation schools for youth over eighteen who wish to pursue technical training further in either day or evening schools, which should provide opportunities for preparation for high schools of all sorts, as well as for practical industrial business life. They should aim at the development of ambitious youth into efficient workmen, good men and women, and good citizens.

Part-time schools should be provided wherever desired where the student is employed part of the time (usually about one-half), in a factory, the remainder of the time being given to instruction in a school furnished and supported by the state. The shop will provide the severely technical part of the training, the school supplementing it by such instruction in English, mathematics, art and science as will develop industrial intelligence and make better all-around men and citizens. Such schools will be successful in specially favored communities where employers take a deep and practical interest in the education of their employes, but such schools cannot be depended upon to provide vocational instruction for the great majority of our youth.

America should have schools providing vocational instruction for the full time of the students, and undertaking in a course of two years to prepare for apprenticeship or for practical work in the various occupations, such as agriculture, commerce, or homemaking. They may include:

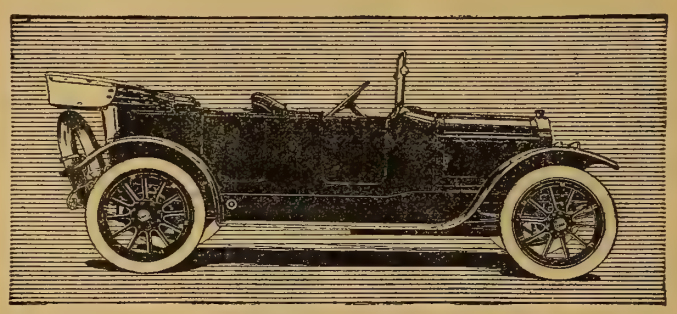
First—Schools which offer courses to youths who are unable to enter apprenticeship on account of immaturity, but who wish to acquire such preliminary knowledge of some vocations as will enable them to shorten the time of actual service as an apprentice. In America there are many who believe that one or two courses, preparatory to entrance into the shop or factory, are especially important, as they bridge over the gap between the time of leaving school at fourteen and the usual time of entering into apprenticeship at sixteen.

Second—Schools which will impart vocational instruction to both boys and girls between the years of fourteen and sixteen who enter the industries without the training of an apprenticeship. Such schools—especially those for the women's trades—have already demonstrated their efficiency in the east. The Manhattan Trade school in New York and the Boston Trade School for girls have been very successful in preparing girls between fourteen and sixteen for practical vocational life.

Third—Schools for youth of both sexes who wish to enter upon commercial pursuits. A practical course of two years should enable them to take good positions on leaving the school. Courses far superior—both from a cultural and a practical point of view—to those given in our modern business colleges can be offered and be completed in the time proposed. The public should provide them.

Fourth—Schools should be opened which offer courses in homemaking, including sanitation, cooking, sewing, care of children, care of sick, and subjects related to home economics. In many communities subjects—such as care of a dairy, and preserving of fruit and vegetables, may be taught. "Homemaking" should not be taken

(Continued on page 25.)



The Case "30"

The Car for All Roads

The sign of mechanical excellence the world over

Few men can afford a motor car as a mere luxury. But many cars are built for looks alone. Little thought of actual requirements of cars for use on country roads is put into their making. For seventy years we have studied the problems of machinery for the country highways. In the Case Thirty we build a motor car that is all that can be asked—in looks, as well as quality. We put into this car hundreds of dollars that do not show on the surface. We put them there for a reason. They give this car out-lasting qualities which few other cars possess. It conquers mud and rocky roads where other cars might flounder. It stands the wear and tear of hard, continued usage. Its superlative quality in its second and third and fourth years becomes more conspicuous than in its first.

Why So

Values That Are Hidden Every ounce of material in the Case Thirty is the best that money buys. We could make large savings on the cost of our motors by cheapening materials. We could save on our clutches, transmissions, drive shafts, wheels and other vital parts. We could cut our assembling cost in two.

* * *

Whose Word? Take our word for these things for one year. Then, for years afterwards, congratulate yourself that you did. Remember, you must take someone's word for the values in the car you buy. Whose word is safer to accept than ours? We have maintained an unbroken pledge to three generations of your family! Consider these vital hidden values when you gaze admiringly on the Case Thirty. Judge it, by face values, in comparison with other cars. Note that no other car has more pleasing lines, more refinement. But recall that in the Case Thirty you are buying more than really shows.

RELATION OF GOOD ROADS TO PROGRESS.

To the Editor of The Homestead:

The primary source of wealth in our agricultura states is the farm products—the margin of profit on farm products is largely affected by the relative distance to market and the conditions of the wagon roads. Without railroads the value of Iowa land would not exceed one-quarter of what it is today. Wagon roads are the connecting l'nks between the farms and the railroads, and with good roads the farmer can take advantage of the best market at all times. Everyone that uses roads should be interested in having good roads. How can they be made? Shall we continue to make them by the primitive methods used by our forefathers, or shall we adopt modern methods?

Obsolete, impractical, inefficient and most expensive methods are in most places in use. Road making in general has not kept pace with most other industries in the use of practical and efficient labor-saving devices. The King drag has come and where used good results follow. The old way of working roads on a day too wet to plow corn or harvest, putting a few slusher fulls of earth in the middle of the road in heaps like a diminutive mountain range and leaving them to be leveled by the elements of nature and use, should be abandoned. Road work should be placed in the hands of competent workmen that work continuously during the suitable season with a practical power road-making equipment. With this ten times as much first-class road can be made and finished, as where old methods are used, with the same amount of money. This plan works no hardship on the farmer, he is the king of the country, and has enough to do on his farm without working roads, and will welcome the day that relieves him of that responsibility and slavish work.

A modern road-making outfit can be operated with three men at a cost from $15 to $20 per day, and make a mile of finished road smooth as a paved street. This includes the making of open ditches on the sides from one foot to four feet deep, at the pleasure of the operator.

How may good earth roads be made? Climate has much to do with them and must always be considered. The greatest enemy of earth roads is water, next frost. Water must be drained off on both sides and in the center of the road wherever the land is springy or sprouty by laying sufficient tile to carry it to the side ditches. In fact all side ditches are best when tiled, thus eliminating the dangers of open ditches and lessening the liability of them washing too deep, as vegetation is thus permitted to grow and check the rapid and injurious flow of surface water. Tiling costs a little more, but it is always cheaper in the end.

Roads should have a slope each way from the center of about three-quarters of an inch to the foot or level or nearly level places, on hills it may be less. If depressions are left they hold water and everything that touches these places makes them larger.

The supreme thing is to keep the roadbed dry, thus lessening the bad effects of frost and the cost of upkeep.

Scientific road making preserves as much as possible the primitive condition of the ground; that is, in grading the road do not plow it up like a field, but displace only what earth is necessary to bring the road to the proper grade and side slope. In observing these matters years are saved in making a perfect roadbed.

Earth roads are most delightful of all roads when good and free from dust. All well-graded roads can be wonderfully improved and the upkeep lessened one-half by covering the top with a coating of about two inches of sharp sand and clay in which may be mixed half crushed stone that will go through a one-inch mesh. If sand and clay are used, mix in the proportion of 80 per cent of sand and 20 per cent of clay. If crushed stone is used, mix it half and half with the sand and clay mixture. This coating should be spread on and harrowed and rolled until it is thoroughly mixed and packed so as to fill all the voids and then it will shed the water like a roof and keep your roadbed dry. In half an hour after a hard rain you will have a good road. This can be improved by sprinkling with a mixture made of crude petroleum in the proportion of one barrel of oil to three barrels of water emulsified with the soluble part or cream of clay.

A little sand improves an earth road some, but when used alone it is too porous and soon washes into the ditches.

The elemental value of our natural resources is manifest only by scientific treatment. This is clearly shown in our leading manufactories of primitive substances.

Other methods of road making entitled to consideration: creosoted block for level streets is in most respects an ideal paving. It is very slippery in cold weather and is expensive.

Asphalt paving with Portland cement concrete foundation will last ten to fifteen years with little repair when honestly made. The foundation can be resurfaced and made as good as new. Horses do not slip on it at any season of the year, and its resiliency makes it a pleasant roadbed.

First-class vitrified brick, that is, brick that is vitrified all through, when laid on a Portland cement foundation makes a very cheap and durable paving. Few clays are suitable to make paving brick. Common brick paving is a nuisance and unworthy of consideration.

Portland cement has achieved for itself more prominence within the past twenty years than any other material. When promptly laid in clean washed sharp sand and stone it will outlast stone itself. It is next to everlasting. This is not so when laid in thin layers, a four-foot walk having an expansion of approximately one foot in fifty at a temperature of ninety-six degrees Fahrenheit. When laid in thick blocks the heat is drawn from the surface and the expansion reduced to practically nothing. The Keokuk dam is constructed without expansion joints. It is massive and monolithic. For paving and sidewalks expansion joints are indispensable. The paving is without resiliency and is not pleasant for that reason. When laid with unwashed sand and stone it is disintegrated by frost and is most difficult to repair, requiring the removal and replacement of whole sections.

Macadam in use for a century is more universally used for country road paving than any other. It costs much less and is more easily repaired. All of New England is noted for its extensive and beautiful macadam roads.

The little Island of Jamaica has more than 1,000 miles of macadam roads and its honorable section men and women carry in pans broken stone sufficient to repair it.

R. W. Crawford.

Lime may improve loose, sandy soils by making them more compact and more retentive of moisture. For this purpose some form of carbonate of lime is usually recommended, and in much smaller quantities than for clay soils. Clay soils will stand more lime than sandy soils. The improvement of sandy soils will often be much greater if the lime is applied to a green crop turned under. Lime hastens the conversion of the vegetable matter into humus, and this, with the lime, helps to fill the open spaces between the sand grains. It is claimed by those who have given much attention to light sandy soils that there are no other types of soils that will respond quite so readily to liming, provided the necessary vegetable matter is supplied in the form of a green cover crop turned under.

The Rough-Road Car

By R. E. Olds, Designer

After 26 years of experience, I tell you a car for the average road ought to be built like this.

Overcapacity

The builder must know the needed strength. Then he must add at least 50 per cent, as we do in this Reo the Fifth.

He must know his steel—have it made to his formula. Then analyze it twice to make sure of it.

He can't test gears with a hammer. He must, as we do, use a crushing machine of 50 tons' capacity.

Not Enough

Tires are expensive. But oversize tires are essential to low upkeep. We use 34x4.

Roller bearings cost five times as much as common ball bearings cost. But the right car must have them. In Reo the Fifth we use 15, eleven of which are Timkens.

Drop forgings are costly, but we use 190 to avoid the risk of flaws. We use a $75 magneto, big brakes and springs, a doubly heated carburetor, a centrifugal pump. And not an engine goes out until 48 hours have been spent in five radical tests.

Reo the Fifth, without these extremes, would cost in the building $200 less. But in the next five years repairs and upkeep would cost you several times that much.

I Know

These are things I know. I have learned them from tens of thousands of cars in my 26 years of car building.

These extra precautions cost this concern two million dollars per year. We are not spending that without knowing the need of them.

We save by efficiency—by building all our own parts. We save 20 per cent by building only one model. Then we spend all those savings on hidden parts. To give you a car which, year after year, will serve you as well as when new.

Look below the frills when you buy a car. All modern cars are attractive. Find out what the maker hides.

A one-summer car is built very differently from a car that is built for keeps. If you want an honest car—a car that endures—watch these inner features.

New Control

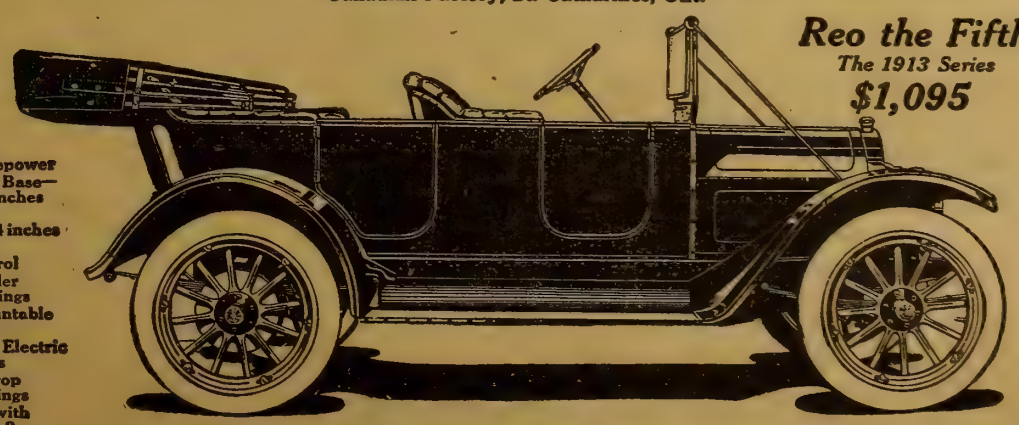
Reo the Fifth has our new control. All the gear shifting is done with one center rod, entirely out of the way. It is done by moving this rod only three inches in each of four directions.

There are no levers to clog the way of the driver. Both brakes are operated by foot pedals. And this car, like all the leading cars, has the left side drive.

A 17-coated body, nickel trimmings, electric lights, genuine leather—all the luxury you want.

Write for our catalog and we will direct you to the nearest Reo showroom. They are everywhere.

R. M. Owen & Co., General Sales Agents for Reo Motor Car Co., Lansing, Mich.
Canadian Factory, St. Catharines, Ont.



Reo the Fifth
The 1913 Series
$1,095

30-35 Horsepower

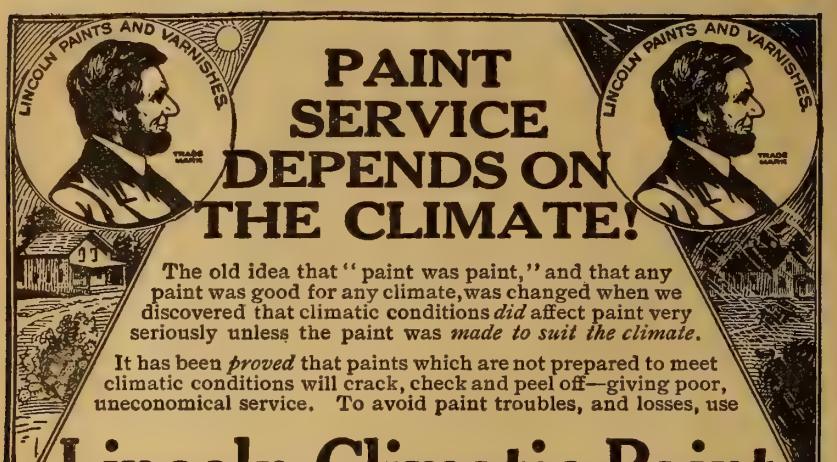
Tires—34 x 4 inches
Center Control
15 Roller Bearings
Demountable Rims
Three Electric Lights
190 Drop Forgings
Made with 5 and 2 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas tank for headlights, speedometer, self-starter, extra rim and brackets—all for $100 extra (list price $170). (Gray & Davis Electric Lighting and Starting System at an extra price, if wanted.)



PAINT SERVICE DEPENDS ON THE CLIMATE!

The old idea that "paint was paint," and that any paint was good for any climate, was changed when we discovered that climatic conditions *did* affect paint very seriously unless the paint was *made to suit the climate.*

It has been *proved* that paints which are not prepared to meet climatic conditions will crack, check and peel off—giving poor, uneconomical service. To avoid paint troubles, and losses, use

Lincoln Climatic Paint

Made on four formulas—to suit the damp, medium, dry or very dry sections of this country. Look at the map, showing prevailing climatic conditions in each section—showing you the paint you ought to buy.

Lincoln Climatic Paint Book—FREE

—tells about our discovery of the greatest fact the paint industry has ever known—shows why it *pays* to buy only the paint that suits your climate.

Ask your dealer for Lincoln Climatic Paints—also for Lincoln Floor Paints, Lincoln Enamels, Lincoln Carriage and Automobile Paints, Lin-Co-Lac for furniture and inside finish, Lincoln Walamo for a fine washable wall finish. There's a Lincoln Paint, Varnish, Stain, Enamel or Finish for every surface, old or new, indoors or outdoors.

Write for free copy of "Home Painting Jobs—How to Do Them." It will help you with the little painting and decorating jobs that make the home attractive and render housework easier.

LINCOLN PAINT & COLOR CO.,

30 DAYS FREE TRIAL

HOG CASH IN HOG-JOY

NO COSTLY PATENT FLUID

These are true pictures of hogs having a good time with the Hog Joy machine. They scramble for place around it; they rub up and down revolving the roller; thick film of oil on roller is carried to affected parts of hogs and kills the vermin.

THE HOG-JOY Saves the cost and bother of frequent dipping which is often dangerous to hogs.

It is *strongly built* of cast iron; unbreakable; can't wear out; economical in operation: doesn't waste a drop of fluid like other machines do. Shipped ready to set up with 2 gallons of oil.

No costly fluid needed—just crude oil or engine oil. But can use any patented fluid if you wish.

Let your hogs try the machine 30 days—free of cost. Your money back if you are not satisfied. Price $10; send money order, check, or cash at our risk. *Reference:* Any bank in Springfield, Ill.

Descriptive Literature Free.

VETERINARY MATTERS.

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

THOROUGHLY good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case.

SYMPTOMS AND TREATMENT.

SICK MARE.

We have a sorrel mare weighing 1,000 pounds that is not doing well. Her appetite is pretty good, but at times her kidneys do not act right. She is in foal. We have given her saltpeter and "black draught." Will this hurt her?

Saltpeter is bad for a pregnant mare as also is "black draught." She may be carrying a dead foal and an examination should be made by a veterinarian. Without making an examination we are unable to say what is the matter.

WEAK JOINTS.

(1) Have a two-year-old sorrel driving mare that got hurt about a year ago. She recovered from the wound, but since that time her front ankles seem to jump out of place. Is this cock ankle and if so what can be done? (2) Also have a mare around seventeen or eighteen years old that is in foal. She seems to have a good appetite, but is very thin and so slow in the field I can hardly get her along.

(1) In "cocked" ankle or "knuckling" the fetlock joint stays bent forward. You describe a weak condition which would be benefited by line-firing and blistering, or repeated blistering without firing, if you cannot have that done. (2) See answer in this issue relative "to sick mare."

BOG SPAVIN.

A bay mare seven years old has a soft lump on each hind leg inside of gambrel joint. The lumps seem to have water or air in them. These came when she was four years old. She is not lame, but gets stiff if overworked. Last fall when she was working every day I noticed that her right hind leg was very large and hard up to the hock joint. She dragged it as if it was heavy. I washed it with hot water twice a day and rubbed in arsenic liniment and it got a little smaller, but is not nearly its normal size yet.

The "lumps" are distensions of the capsular ligaments of the hock joints and contain synovia (joint oil). The condition is practically incurable and treatment will not pay. The mare should not be used for breeding as tendency to the trouble is notoriously hereditary. The enlargement of the hind leg may be lessened by hand rubbing of the parts and then bandaging snugly each time she comes into the stable.

INDIGESTION.

I have a calf that is eight days old. For the first two days it seemed all right and took nearly all the milk, but later began lying around, would take only about one-third of the milk and grinds its teeth continually. It looks gaunt and is not doing well. I turn the cow out through the day in a blue-grass pasture and did so before she calved. She also has all the good bright oat straw she can eat with a quart of oats and four ears of corn morning and night.

In such a case indigestion is present and at the first symptom of the trouble a full dose of castor oil should be given, shaken up in milk. Give it now. Stop feeding cow corn. Make calf take exercise.

RHEUMATISM.

A seven-year-old mare weighing 1,500 pounds has been troubled for the last two years with a swelling in the joints of her legs. At the present time it is the right stifle joint, and she is very lame and scarcely able to walk. Am feeding her bran with a tablespoonful of glauber salts three times a day. The veterinarians here give her temporary relief. Can she be cured permanently?

We take it that she suffers from rheumatism of an inflammatory character and if that is so it is unlikely that she will permanently recover. At time of attack give her half an ounce of salicylate of soda three times a day, or two drams of aloes at similar intervals. Do not feed millet hay.

CALF CHOLERA.

My calves seem all right at birth, nurse once or twice all right, but when twenty-four to thirty-six hours old they begin to scour and do not live more than three or four days. Have lost three within three weeks. The cows have been fed hay and corn fodder, and about ten days before calving they were fed about five quarts of ground corn and cob meal. They have been fed no moldy feed of any kind.

This is a germ disease born in the calf and cannot be cured by medicine.

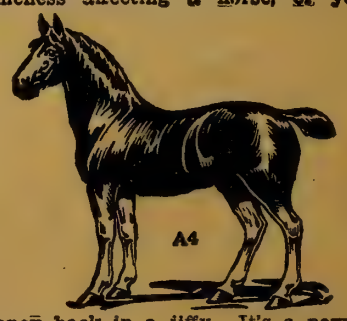
Makes Lame Horses Sound

Cures All Kinds of Lameness, Quickly, Positively, Permanently.

Mack's $1,000 Spavin Remedy is absolutely guaranteed to cure Bone or Bog Spavin, Ringbone, Thoroughpin, Curb, Capped Hock, Shoe Boil, Sprung Knee, Lacerated and Ruptured Tendons, Sweeny and all other forms of lameness affecting a horse, or your



money back in a jiffy. It's a powerful remedy that goes right to the bottom of the trouble and cures the lameness in just a few days, and the animal may be worked as usual. Contains nothing that can injure the horse and heals without leaving scar, blemish or loss of hair.

Ask your druggist for Mack's $1,000 Spavin Remedy—if he cannot supply you, write direct to us. Ask for our valuable Free Book, "Horse Sense" No. 8.

If you are not positive as to the cause of your horse's lameness, mark on horse above where lameness occurs and tell us how it affects his gait, also tell age of animal. Our graduate veterinarian will diagnose the trouble and tell you how to cure it. This service is free.

Northfield Well Curb

Prevents disease. Germs and filth cannot seep in. Will not rust or taint water. Any size. Anyone can install. Write today direct to factory for catalog

Northfield Iron Co., 118, Water St., Northfield, Minn

It may be prevented in a large percentage of instances by vaccinating the new-born calf with imported polyvalent bacteria against the disease, or the dam may be treated in the same way before calving so that the calf will not scour. The bacteria is handled by dealers in biological products and may be ordered through the druggist

PUFF.

Last October a six-year-old bay mare stepped on a nail. The nail was pulled out immediately and turpentine inserted in the hole. The next morning there was a swelling on the upper side of the pastern joint. The hole was opened every day and the pus allowed to run out until well, but the swelling never went down. This spring the swelling seems to be getting larger and is about the size of a hen's egg, soft and appears to have fever in it. She has never been lame.

Clip off the hair and paint the puff with tincture of iodine each other night. At other times apply pressure by means of a wad of oakum or cotton kept on the part by means of a bandage.

FEEDING STALLION COLT.

I have a Percheron stud colt twenty months old weighing 1,500 pounds that I wish to keep growing so as to make a large, useful horse. What would make a good ration to feed this colt? I have oats, corn, bran and oil meal, good alfalfa and prairie hay.

The feeds mentioned are suitable, but oilmeal will not be needed when colt is on grass. Feed oats and bran on grass and keep the corn and oatmeal for winter feeding. Add hay freely when pasture becomes poor.

INDIGESTION.

Have a gray mare six years old weighing 1,350 pounds and in poor condition. I bought her a year ago and she has lost flesh all the time whether worked or idle. At times she has good appetite and ambition. She is hide bound, her hair is curly in patches and the manure is offensive. Sometimes is water bound and again will pass a large amount. She sweats easily and does not seem to be able to stand much exertion. I have given her all kinds of feed and consulted two veterinarians with no results. She has been well cared for and well fed. What are the symptoms of blood worms?

Indigestion explains all of the symptoms mentioned and blood worms may be the cause. If so the worms will be found in the manure. Have the teeth attended to by a veterinarian. Also have her clipped. Feed whole oats, bran and mixed hay. Twice daily give her half an ounce of Fowler's solution of arsenic and in a week increase to three doses a day. When she has picked up gradually discontinue the medicine.

Have a five-year-old gray Percheron mare that is not doing well. She looks gaunt and does not eat one-fourth as much hay as the other horses her size, and about one-half as much grain. She is well muscled and has good life.

See answer under this head in this week's issue.

DIFFICULT CALVING.

(1) We had a cow that could not deliver her calf. It seemed too large. Three of us finally managed to pull the calf until its hip bones came in contact with the pelvis of the cow, but could get it no farther until we placed a hook back of its hip bone, when we were able to deliver it. What should we have done in this case? (2) Is there any danger in breeding to a stallion that cribs? Is this disease hereditary? (3) Also have a young cow that comes in heat regularly, but does not get with calf. (4) Please give directions for floating a horse's mouth. (5) What can be fed a driving mare to keep her from coming in heat?

(1) Perhaps you were too hasty and did not give the cow time in which to get properly ready for calving, by relaxation of pelvic ligaments, etc. In such cases sweet oil or raw linseed oil should be freely injected to lubricate the passage. (2) The habit by some is thought to be hereditary; but usually it is learned by imitation. If the stallion is pure bred and a good individual we would use him. (3) A probe should be used, not the finger. Have an expert open the womb. (4) Dentistry has to be learned by practical lessons from an expert. We cannot give instructions here. (5) Have her spayed. That is the only preventive.

THRIFTLESS STEER.

A steer coming two years old which I am feeding for the market does not fatten like he should. I commenced feeding November 1st, but did not get them on full feed until March 1st. He eats pretty well, but not as much as the rest. I feed corn and fodder in the morning and corn and timothy hay at night. His hair looks good and he seems to have plenty of life, but does not fatten at all.

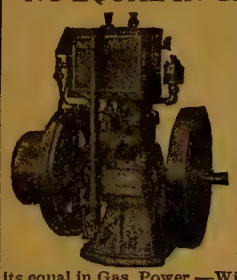
Have his teeth examined, as milk tooth crowns may have lodged and should be removed. This is a very common cause of poor condition in young cattle. Feed four times a day, adding bran, and mixed clover or alfalfa hay to the ration. He may do better on grass. If not have him tested with tuberculin, as tuberculosis may be present.

SWEATING.

After my calves get to be two and three weeks old they take sweating spells. We had one calf that sweated this way for two weeks and was just soaking wet. They are fed on cow's milk until about one month old and then they are given half whole milk and half separator skim milk. They get plenty of exercise and eat and drink well.

The sweating is due to indigestion, but may be partly due to close, poorly ventilated stable. Do away with the latter condition. Feed the milk four times a day, in small quantities. Physic each affected calf.

THE "New-Way"
AIR-COOLED.
All sizes for Heavy Duty Farm Engines
NO EQUAL IN GAS POWER



"Gentlemen:—
I have been the owner of a "NEW-WAY" engine for nearly a year and it has at all times given satisfaction.

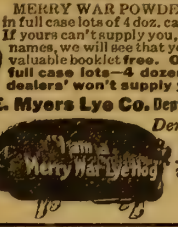
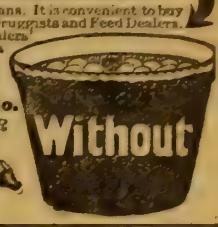
SPRAY!

Merry War Powdered Lye and Water Make The Best Mixture
Thousands of orchardists and vegetable growers have learned by experience that the surest way to make spraying pay the biggest returns is by making a spray mixture of MERRY WAR POWDERED LYE in the proportion of one 10 cent can to 15 gallons of water. If water is very hard use a little less than 15 gallons to each can. This makes 50 gallons cost only 33⅓¢; the same amount of Bordeaux Mixture when arsenate of lead is used costs from 40 to 66 cents at prevailing prices of its ingredients.
E. Myers, President-E. Myers Lye Company
Better Than Bordeaux Mixture
MERRY WAR POWDERED LYE makes a better spray mixture than Bordeaux Mixture, Paris Green or any other combination of chemicals because it does not burn and scar foliage, injure buds or russet fruit. But it is quick death to all destructive fungus growths such as bitter-rot, blotch, scab, etc., and also effectively destroys the codling moth, San Jose Scale and all other insects that are a menace to crop profits. To destroy Borers use one can to 10 or 12 gallons of water. The drippings act as fertilizer, enriching the soil and increasing the yield.
Read This Man's Letter "I have been using MERRY WAR POWDERED LYE for some time. Have used two cans this spring and find it fine for spraying orchard. I think it will do just what it is recommended to do." W. T. TAYLOR, Ludwig, Ark.
Warning! Don't let any one persuade you that any other lye will make as good a spray mixture as MERRY WAR POWDERED LYE. There are no substitutes, so be sure that you order by name and insist that your dealer supplies the genuine MERRY WAR. Cut out and save these directions: 1 can MERRY WAR POWDERED LYE to 15 gallons of water.
SOLD BY DEALERS EVERYWHERE
MERRY WAR POWDERED LYE comes in 10c cans. It is convenient to buy in full case lots of 4 doz. cans for $4.80, at Grocers, Druggists and Feed Dealers. If yours can't supply you, write us, giving your dealers' names, we will see that you are supplied, and send a valuable booklet free. Order direct from us in full case lots—4 dozen cans $4.80, if your dealers' won't supply you.
E. Myers Lye Co. Dept. 808 St. Louis, Mo.



Demand MERRY WAR POWDERED LYE for hog use.



A Vigorous Farm Horse
The Result of
ABSORBINE
TRADE MARK REG. U.S. PAT. OFF.

All ills in man or beast usually have a small beginning. The breakdown of a horse starts, as a rule, with a shoe boil or a wire cut, or bruises, collar sores, swollen glands, strained ligaments or something else of this kind—all of which can be cured by Absorbine.
Absorbine does not blister or remove the hair and horse can be worked.
Absorbine is a mild, pleasant liniment to use—is healing, soothing and invigorating and a positive Antiseptic and Germicide.
USE ABSORBINE to remove Bursal Enlargements, Bog Spavins, Thoroughpins, Puffs, Shoe Boils, Capped Hocks, Swollen, Painful Swellings; to cure any strain or lameness; to repair strained, ruptured tendons, ligaments or muscles; to strengthen any part that needs it. You can buy Absorbine at regular dealers, price $2.00 per bottle or sent to you, express prepaid with full instructions. Write me about any case on which you would like advice. Horse book 1A free. Manufactured only by
W. F. YOUNG, P. D. F., 391 TEMPLE STREET, SPRINGFIELD, MASS.

DOWN COME PRICES!
Let Me Ship You This Great 5 H.P. Galloway Gasoline Engine for Only 99.50

$600 FORD AUTOMOBILE GIVEN AWAY
You Can Get This Auto Free! Free! Free!
The Farm Magazine will give this car in their big automobile contest, which opens May 1st and closes June 26th. Anyone is eligible to enter this contest, whether a subscriber to our paper or not. Mail the coupon and let us tell you all about it.

OBERA PETIT, Anita, Ia.

OUR METHOD
This contest is different from any you ever heard about. There are no strings to it in any way. It costs nothing to enter. We will give not only the automobile as first prize, but twenty-four other grand prizes as well, among them are $100 in gold, gold watches, silver sets and many other valuable gifts. To those who do not win a prize, we have a very liberal commission offer.
Here is a fine chance for you to win an elegant prize. Just think, a little work each day and a fine new Ford automobile as a reward. This new machine has never been run a mile, and is ready for you or some other industrious person.
Would You Like This Auto

YOU CAN GET THIS AUTO
Anyone who enters this contest can win the auto by just a little effort. We want to increase our subscription list in your locality. All you have to do is to take subscriptions to our paper and send them to us. For each subscription we will allow you votes, according to the vote scale, which we will send you. The person who has the most votes on June 26th will get the auto FREE, the person who gets the second largest number of votes gets $100 in gold, and so on until the prizes are all awarded. If you have felt that you could not afford to buy an auto heretofore, now is your chance. You can earn this fine machine without one cent to pay. If you win the auto and do not wish the car, we will send you the equivalent of the car in money, which is $600. We will gladly furnish you the names of other contestants who have won prizes to assure you of our fair and square methods. We will also gladly refer you to any bank or business house in Omaha as to our standing.

Here Is a Letter From Our Last Winner
Contest Editor: Anita, Ia.
I take this method of thanking the people of Anita and vicinity who so kindly helped me in winning the automobile in the contest.
I also wish to thank the people of Fontanelle and Bridgewater who were so kind and generous to me.
And I wish to thank the contest manager, he treated me so fair.
Yours truly, OBERA PETIT.

10,000 Votes Free
In order to give you a start, we will give you 10,000 votes FREE. All you have to do is to send in the coupon below. Then you can add to this by sending in subscriptions, for which you will be credited with votes. It doesn't take long to pile up a big lot of votes to your credit.
The first thing to do is to send in your name and address on the coupon and we will send you full particulars, also a picture of the auto—then you can start right in getting subscriptions. Don't delay. Mail this coupon at once.

FARM MAGAZINE, Omaha, Neb.
Enter my name in your contest and send full particulars. C

This coupon will give me 10,000 votes to start.

HORTICULTURE

CO-OPERATION AMONG FRUIT GROWERS.

Developing methods of production and distribution of agricultural products along purely economic lines is of comparatively recent origin, more attention having been given possibly to the side of production. However important it may be to be able to grow crops in large quantities or of particular qualities at a minimum cost, it is equally important to be able to dispose of them in the most economical way and to the best possible advantage, for frequently the easiest and largest profits in any business are those made through methods of handling, marketing and distribution; and it is here that judgment based upon economic principles must be exercised and careful dealing resorted to if the highest returns are to be realized.

A common method of disposing of the crop is by selling directly to retailers, which has proved successful in some instances by choosing only one dealer in a place and putting nothing but first-class material on the market. The most usual method of disposing of fruit crops, as contrasted with selling other farm products, is through commission merchants. This arrangement, however, has not proved entirely satisfactory, the reasons for which are attributed partly to the system, partly to the middleman, and partly to the producer, the middleman always looking out for his individual interest, taking advantage frequently of the producer's ignorance of marketing and market conditions, while the producer in many instances performs his part of the transaction in a careless indifferent, or haphazard way. The business is conducted on the plan that if there is ay profit it belongs to the commission man; and if any loss it goes to the producer. This frequently invites dishonesty, and much swindling has brought the commission men as a class into disfavor and sometimes unjustly.

Selling through co-operative associations, which is more largely practiced by the fruit growers of the west than any other section of the United States, has proven successful just in proportion as the members have followed the rules, regulations, and instructions of such associations, which in many cases has been with very gratifying results. In addition to returning profits to the producer, which formerly went to a number of middlemen, co-operation has taught the grower the economic value of a first-class product; the economic importance of picking, packing and handling his produce; and fair dealing with the purchaser and public.

W. H. Chandler, of the Missouri Experiment Station, who has secured information from quite a large number of co-operative associations regarding their methods of distribution and marketing fruit, points out that the growth of the co-operative movement among fruit growers in the United States has been very rapid during the past ten years, even surpassing the expectation of the most sanguine and best-informed men interested in the fruit business. A number of failures among the organizations, however, are reported.

From the reports of a number of successful associations submitted to the station it is shown that co-operation enables growers to make use of a number of better business methods; (1) By enabling them, through their manager or representative, to meet on equal terms the men with whom they deal. Their representative, thoroughly understanding the markets, "with all the growers and a good pack behind him controls a business that demands respect, and he should generally be able to set the price." It must be remembered, however, that co-operation is not for the purpose of creating a monopoly or forcing unnatural prices for the product. (2) It frequently brings about or forces track selling, which in the opinion of some brings better results than consigning, one association reporting that for 272 cars consigned it received an average of $1 per crate and for 288 cars sold on track $1.66 per crate. (3) Wholesale dealing is made possible, not only in selling farm products, but in buying anything the grower needs, especially packing materials, spraying materials, fertilizers, and the like. (4) Because of the larger business it controls the association is likely to get better service from the railroads, cold-storage plants, etc. "Then it is in a position to secure adjustments with the railroads and other large concerns on points of disagreement, when the cost of litigation would make such adjustments impossible with the small grower." (5) Men of better business ability than the average grower can be secured to manage the association, which means much in the economic disposition of a fruit crop or most any other crop for many of the best growers, who understand their trees and the methods of care, the best, are not the best adapted to deal with men and markets and market conditions.

Co-operation further enables growers to make use of fruits grown in small quantities, which are often wasted because no man has enough to sell to advantage. With co-operation a car could often be loaded and the fruit used to some advantage to each grower, carload lots being considered the economic unit of shipment. It secures better equipment for handling a crop in a section, as disorganized sections are less likely to have the necessary cold storage precooling, and other equipment for the best handling of a fruit crop. In addition to the benefits of co-operation already mentioned, Mr. Chandler notes the following: (1) The crop may be distributed so as to prevent gluts in the market; (2) it enables the growers to establish a brand that will be known in the markets and will thus insure better prices; (3) it insures better care

JOHN DEERE IMPLEMENTS

JOHN DEERE MOLINE, ILL. THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

John Deere Disc Harrows and Corn Planters

This spring pressure harrow pulverizes your soil thoroughly and puts it in condition to grow the biggest crop you ever raised. The extraordinary flexibility of John Deere Disc Harrows due to spring pressure, insures thorough cultivation of your entire field. It leaves small middles and cuts out dead furrows.

John Deere Corn Planters

The great accuracy of drop is what naturally interests you most. John Deere Planters give the highest accuracy of drop attainable. Repeated tests show ten to fifteen bushel per acre in favor of accurate planting. You profit by the increased yield due to perfect stand, by additional years of service and freedom from break down.

Bigger Crops from Better Seed Beds and More and Better Corn

Two books that will prove a great help to you in the preparation of your land for seed, and the planting of corn. These books contain valuable suggestions by men who are experienced on those subjects. "To get the books you want," see lower right hand corner of ad.

John Deere Wagons

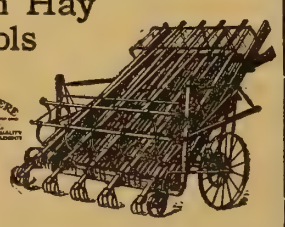
No other implement on the farm is used as much as the wagon. Nothing is more abused. Consequently the wagon should have the quality to withstand this usage.

John Deere Wagons are built of oak and hickory—the best material known for wagon making. They stand up under the most severe tests, and give the satisfaction you want.

John Deere Ironclad Wagons

A booklet that gives you valuable pointers on how to buy a wagon, and other interesting articles that you should know about. See lower right hand corner of ad. and see how "to get the books you want."

Dain Hay Tools



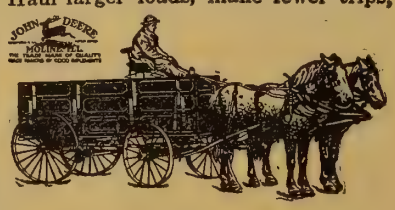
Use Dain Hay Tools and put up your hay quicker, better and more economically than with any other hay tools.

The Dain Hay Loader is easy to operate. Simple construction, few parts, nothing to get out of order. Material and workmanship of the known Dain standard, proven by service to be reliable and trustworthy. Ask your John Deere Dealer about the Dain line.

Dain Hay Loader and Side Delivery Rake tell you about how to use these tools to handle your hay rapidly and economically. Should you want information about other Dain hay tools, tell us which tool you are interested in. See lower right hand corner of ad. how "to get the books you want."

Davenport Roller Bearing Steel Wagons

Reduces the draft; makes your hauling easy; the roller bearings do that. Haul larger loads, make fewer trips,



save time. Your time is worth money to you.

You do the same work with one horse less; if you now use three horses you will only need two; if you use four, three will do the work.

No repair bills to pay; no tires to reset; the Davenport Roller Bearing Steel Wagon is practically everlasting. The first cost is the only cost.

The steel spokes don't pick up and carry the mud like wooden spokes; they cut through it.

Ask to see the Davenport wagon at your John Deere Dealer's.

When The Going is Hard

Containing twenty-six articles on wagons. Tells you why the dish is put into the wooden wheels and other things you should know about. It is interesting and you'll like it. Lower right hand corner of ad. tells how "to get the books you want."

Better Farm Implements and How to Use Them illustrates and describes the most complete line of farm implements made. Tells when and how to use them under varying conditions—answers questions about farm machinery and is a practical encyclopedia for the farm. It is worth dollars to you. You can't afford to be without it. Write today for "Better Farm Implements and How to Use Them."

John Deere Plow Company, Moline, Ill.

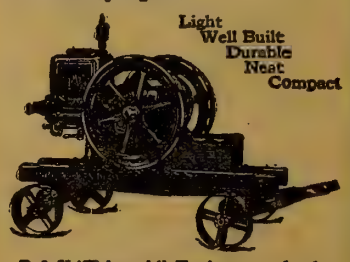
Branches and Dealers Everywhere

R & V "Triumph" Gasolene Engines

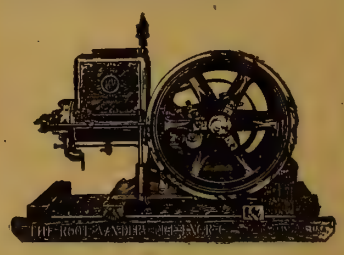
Popular Farm Power

Develop even more than rated horsepower. Easily started, smooth-running, dependable. Economical in use of fuel.

Speed easily increased or decreased. Best type of magneto on the market. Portable and stationary engines.



R & V "Triumph" Engines can be furnished in sizes 1 to 12-hp., with the hopper-cooling system. This cooling system does away with tank, pump, piping and fittings, making a neat, compact engine noted for its good working qualities. No air-cooled engine troubles to contend with.

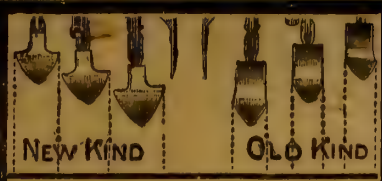


Letting Gasolene Do It

Tells you how to lessen your work every day of the week, and every season of the year. Get this book and see how your work can be made easier, at the same time saving you money. Lower right hand corner of ad. tells you how "to get the books you want."

"To Get the Books You Want"

Write to us at once stating which books you want, and they will be mailed free. To be sure that you get a copy of "Better Farm Implements and How to Use Them" ask us for Package No. X -27



SAVE THE CORN ROOTS

WITH my surface and deep cultivator shovels. They scour where others won't, leave ground smooth, handle and run very easy for boys and horses. Your money will be returned if shovels don't please. Send for booklet.

of the orchards; and (4) in nearly all cases it results in greater stability of the industry.—[Farmers' Bulletin.

GROWING THE DEWBERRY.

A Nebraska subscriber writes:

I am starting a small fruit plantation and want to ask about the Lucretia dewberry. I have one friend who says plant it by all means, but another neighbor of some experience says: "It's not worth bothering with." Which shall I believe? As I expect to make my living from a five-acre fruit patch I must work every game that will bring in an extra dollar.

The dewberry may be profitably grown, but it should be understood at the first that it requires special care, and more labor than some other fruits. If a man is willing to learn the business, and do the required work at the right time, the dewberry bears big crops and proves profitable in any reasonable market

Coming in season as it does just between the raspberry and the blackberry, it is very desirable and often sells as an early blackberry. But many customers, when they have once learned its flavor, prefers it to the blackberry and will even pay an extra price for it.

The faults of the dewberry for northern culture are these: It is a too rampant grower and its long, trailing vines are tender and will winter kill unless protected. These are two serious faults and successful treatment has direct reference to these weaknesses.

When the new growth reaches the length of six or seven feet the tips must be mercilessly clipped. If they are not clipped they will grow out fifteen feet or more and the most of the fruit buds will form out on the extreme ends. It is to avoid this and keep the vines in handling shape that clipping is necessary. The clipping will make them branch out; these laterals will also need clipping—no side branch should be left over two feet long. Because the vines are covered with sharp, strong thorns stout buckskin gloves are needed to handle the dewberry.

When fall comes prepare to cover by cutting out all the old fruiting canes and all new ones except the best six to the hill. Usually a great number of sprouts will come up, especially if the soil is very rich, so it is the custom to recommend poor soil for this fruit. Now coil up the six preferred canes about the hill—the coil need not be over two feet in diameter—and cover with earth, not deeply, but just enough to prevent freezing and thawing again. Then in the spring, about April 25th, raise your six vines, and tie them to a seven-foot post. Space them evenly about the post, and when fruiting time comes your post will be an ebony column, a sight to behold. The hills should be five feet apart each way, making room for good culture.

This is the system followed by the fruit men along the clay hills in the neighborhood of Cincinnati. One hill will often yield six quarts of fruit, and the selling price is from $3 to $4 per case. So when it is skilfully done there is money in dewberries, but when no system is followed the crop is sure to be a disappointment.

Many men say, "Oh, that is too much work," and they let the vines run and take the chances and what they get is a failure, for, be it known, the dewberry will not pay for the ground it occupies unless the measures needed for success are regularly followed.

It is better—far better—to have ten hills and do the work needed to make a crop than to have ten acres, or a half acre, grown upon the lazy man's plan.

Not knowing just what plan you are following, in the apportionment of your ground we would advise that you try about one-fourth acre of dewberries. That is enough to start with. Select the poorest soil you have and do not give them manure. Follow strictly the methods by which fruit men elsewhere have succeeded and you cannot fail.

THE FALL-BEARING STRAWBERRY.

To the Editor of The Homestead:

We notice in the horticultural journals that a lively discussion is now on as to the merits, and demerits of the ever-bearing strawberry. We have been for some time expecting this ventilation of an interesting subject. When the sale of a variety in the fruit

Don't Miss 13 Farm Plans FREE! LUMBER ECONOMY SERIES, No. 8

With Complete *WORKING DRAWINGS* and *SPECIFICATIONS.*

Here they are, Mr. Farmer Man, a baker's dozen of them—in two books. Practical Plans for Barns and other Farm outbuildings, with detail drawings so that any home carpenter can easily and economically build from them. They are Vols. 4 and 20 of the famous Cypress Pocket Library," hot off the press. They have a real value to you, especially if you think of building, or if you ever expect to.

Vol. 4, Special "CYPRESS BARN BOOK" contains:

28-COW STABLE, with milk room, and two safe and sound silos—all strictly modern. Feed and manure carriers, ventilators and economical arrangement. Full plans, details and specifications for building.

MIDDLE-SIZE BARN, four drawings, elevation—floor plan and framing details—silo inside barn. Trussed self-supporting roof. Material and work specifications.

40-ACRE FARM BARN, four drawings—elevation, floor plan and full framing details—all you need. Material and work specifications.

8-HORSE STABLE, four drawings that show exactly how to build. Material and work specifications.

"SURE SHOT" SILO, will not freeze in any weather, nor chill at the curing season, nor bake in hot weather. Square outside for strength, practically circular inside—no corners to sour in—and economical and easy to build because it requires only **stock lumber** to be found in every yard. Investigate this. Working plans and specifications complete.

VOL. 20, "General Farm Needs" Book contains:

LARGE STOCK BARN, stalls for 24 cows, and a silo—complete floor plans. Three drawings.

GENERAL PURPOSE BARN, with plans for building—four drawings. This is dead easy.

"YANKEE" BARN, for 80-acre farm, elevation and floor layout. Two drawings.

DOUBLE POULTRY HOUSE, elevation and floor plan—two drawings. Simple enough.

DOUBLE CORN CRIB, two drawings—showing a practical building. A dandy.

HOG HOUSE, two drawings with practical suggestions for building.

FRAME SILO, known as "Cold-Climate Silo," four drawings—a winner.

SMALL CONSERVATORY, four drawings—easy and cheap to build.

No hitch nor catch in this—we are advertising Cypress lumber and want to tell you all about it. These booklets show you **how to build to best advantage—with least outlay of both lumber and labor** and give you a world of valuable information about lumber values. And books and plans are absolutely **FREE.** Write for the one you can use and write soon. Clip off the coupon and send it in. Help yourself to these books.

STRAND'S NURSERY, Box 30 Taylors Falls, Minn.

When writing to advertisers please mention The Homestead.

world has reached the enormous proportions of the trade now enjoyed by the sponsors of the fall strawberries it is time that the general public should be considering it with some interest.

After a careful study of the question, reading all available data, and especially observing accomplished results in the field, this writer has admitted unanimously that the September strawberry has arrived. Indeed the evidence that it has arrived and will arrive in any desired quantity (after wise plans are duly laid out and executed) is so overwhelming that it is idle to doubt and useless to combat the conclusion.

There is absolutely no good and sufficient reason for denying that the same faithful care and labor required to produce great crops of strawberries in June, when directed into the proper channel will produce equally great crops of berries in September.

Buy the plants which have the fall-fruiting habit, plant in rich soil and give intelligent, faithful culture, and nature will do the rest exactly as she does in June.

Just now plenty of men are rushing into print with the momentous statement that "they bought a dozen so-called fall strawberry plants and that the results were disappointing."

Do not let these ex parte statements influence you. With our own eyes we have seen acres of this fruit in one field and almost unbelievably loaded with berries in September. Ripe fruit, green fruit, and bloom abounding at the same time, from ten berries upon small plants up to hundreds (between four and five hundred) upon each hill where runners had been cut.

It is altogether too late to discuss the question whether or not fall strawberries can be grown. They are grown in enormous quantities, upon just such soil and under just such conditions as are found all through the Mississippi valley. They are grown in hundreds of varieties, just as the June berries are, and of as many different sizes and forms. They do have one quality, and a very valuable and important characteristic which differentiates them from the early summer berries. It is this: The young plants grown from runners starting in June will fruit abundantly three months later. Now just think of that and think what it means. It is a most surprising fact, but it is a fact well established and undeniable.

The only question which it is timely and sensible to discuss now in relation to the once suppositious, but now real, fall strawberries is this one: Will it pay to grow berries largely for the September market?

This is the question and one which only experience can answer. That answer will determine the practical value of this great advance in horticulture. At present time the opinions of fruit growers differ greatly. Some think that berries will not sell in competition with grapes and other fruit of the later season. Others say that people never tire of strawberries and will gladly buy them as long as they can find them.

There is perhaps some truth in each view, for buyers will divide into classes. There is certainly a very large class of persons who never tire of berries. But one point should be kept in mind by the berry grower. It is not at all likely that unusual prices will be realized for the late berries. Be moderate in your expectations. If you can sell a big crop at June prices, say ten to fifteen cents, be satisfied. That is doing well enough.

But while results are uncertain, of this one fact you may be sure: the fall strawberry has arrived numerously and with both feet.

M. E. Hinkley.

BUD BLIGHT IN APPLES.

Could you tell me what to put in with Bordeaux mixture spray for bud blight in apple trees, as my trees were affected with it? Anything along that line would be appreciated.

If we only could tell you just how to cure blight we would very gladly do so, gladly for several reasons. First it would be an accommodation to you and secondly it would make this writer the most renowned horticultural writer in the land. It would boom the editor as the most sagacious scientist living. It would put him ahead of all the professors in all the agricultural colleges in the land. For not one of them has been able to solve the mystery of blight and suggest a positive cure. And if they, with all their special research and study do not know, how can a poor busy editor be expected to solve the mystery?

Of course, the horticultural professor will have an answer when you ask him what to do. He will assume a look of profound wisdom and say: "My dear man, we do not advise spraying for this trouble. That may do some good, but this is such a subtle disease that it is only partially controlled by any external applications. Cutting is the treatment we advise. As soon as the first symptoms of blight appear clip and burn the limb. Do this as fast as it appears and there will be no blight left in your orchard." This is, of course, a very wise and self-evident proposition, and the professor might have added, "sometimes there will be no orchard left."

There is one fortunate fact about blight: It is not a regular visitant, but appears spasmodically. You may think one season that your orchard is ruined. It will look as though a fire had passed over it and then for two years there may not be a sign of it. So this subscriber may find that he has no need of a remedy the coming season.

A number of theories as to the cause of blight have been advanced and defended with great learning and plausibility. And though one theory may be diametrically opposed to another, both are made to appear reasonable to the amateur.

The late William Langham, of Iowa, a practical horticulturist and a very thoughtful observer, left on record a theory and a suggestion which seem as wise as anything we have seen. At least it is worth quoting to stimulate thought. He said: A subscriber from South Dakota writes:

Let us examine how a plant or tree grows. It gets its nutriment from the soil and air, and the two principal organs of growth and life are the roots and leaves. Entering the system at and through the root hairs, water is taken up, bearing in solution small amounts of lime, potash, nitrogen and other chemical substances. This water, commonly called sap, is carried upward to the leaves, where it meets the carbonic acid and other elements of the air. Each little leaf of the tree becomes a laboratory in which the heat and light of the sun work the most wonderful transformations. Here is formed or gathered plant food consisting of carbon, starch, sugar, etc., which being distributed downward through twigs, limbs, trunk and roots, in the outer layers, make the new growth, or wood. The upward flow of the sap and the downward flow of the food material go on simultaneously. This movement is the greatest in the cambium layer and the bark next to it.

Now the blight is practically a disease of the new growth. It is caused by something going wrong in the chemical laboratory of the leaf. And if this be true the disease should be treated through the circulatory system of the tree. We are rapidly coming to have the serum treatment for all human and animal diseases, the cure being carried through the blood. And in the same way the cure for tree diseases should be carried into the circulation of the tree. The remedy could be applied to the soil and then taken up by the roots. Or possibly it may be put directly into the tree. As the sap of the tree carries the elements of tree growth, carbon, nitrogen, potash, magnesia, etc., why should it not be made the vehicle for carrying the remedy to make it immune to disease?

Now this is Mr. Langham's theory, and while he has never been hailed as a prophet and a great scientist we are not sure but that he should be.

We have read much upon the subject of blight, but we are free to say that we have never found anything more pointed, more sensible than the above. If there be a more likely theory as to the cause, and possible cure of blight we have yet to see it. But let our fruitmen take courage, for the affliction of blight is not likely to be permanent. Your orchards will come up smiling and will be as good as new.

Ask your neighbor to subscriber for The Homestead.

15 to 40 Cents An Acre
Protects Your Crops from Hail

Many farmers, otherwise careful, overlook hail insurance, yet $10 is lost by hail in any grain-growing area to $1 by fire, lightning and wind combined.

The Home Mutual Hail Association, of Cherokee, Iowa, is a farmers' mutual company. No profits are made for stock holders and you get the dividends in low-priced insurance.

Therefore, this company is able to insure your crops at a bottom figure. By spreading our risk over a large area, selecting territory and exercising judicious care in not accepting too much insurance in any one neighborhood so as not to be exposed to a large loss in the event of a severe storm in that locality, we established a basis on which hail insurance can be bought by our members profitably.

We have a book entitled "Ten yards of What They Say," which includes numerous comments and endorsement from Iowa farmers who have recovered from us on account of damaged crops. The first one reads: "Your adjuster settled my hail loss to my entire satisfaction and I recommend my neighbors to take hail insurance with you." The numerous other testimonials from various parts of the state of Iowa are similar.

We also have another book we would like to send you, which will give you our complete plan. It explains why we insure on the **Acreage Basis** instead of the bushel plan, pointing out that the poorest farmers claim the heaviest losses when hail visits them and want to share equally with the good farmers of the neighborhood. On the **Acreage Basis** each is on an equal footing and the capable, industrious farmer does not have to pay extra premium to pay losses for his indolent neighbor. It also shows many other meritorious things and prints in full our Articles of Incorporation and By-laws. We want you to get these two books and make a study of our company. No obligation is attached. They are free to every reader of this paper.

$1000.00 IN PRIZES TO CORN GROWERS

We want you to also send to us for particulars with reference to our premiums for the best ten ears of corn grown in Iowa. We are going to distribute $1,000.00 to Iowa corn growers. The state is divided into four zones and a $50 prize will be awarded as the first premium in each zone and eight smaller premiums for other good corn. However, in case you are a member of our association by July 15th, we will pay you a **double** premium or $100 if you win first prize in your zone, $50 if second prize, etc., doubling all the way down. The contest is to be held under the direction of the Iowa Corn and Small Grain Growers' Association, Ames, Iowa, and you can be assured of fair treatment. We hope you will get in early. Write us today for the booklets mentioned above and the rules of the corn contest.

Home Mutual Hail Association, Cherokee, Ia.

TESTED SEED CORN

Guaranteed To Satisfy Or Your Money Back.

EVERY ear of our corn is tested for germination and we ship it in the ear, in the crate, so you can see just what it is. Our corn is adapted to your locality, no matter what part of the corn belt. Our growers are among the leading prize-winning exhibitors at the best corn shows, and our seed is especially selected and tested. Our price is extremely low when you consider that it only costs you less than 80c per acre for this specially selected and thoroughly tested seed. Tell us whether you want the Yellow Dent or the White Dent and we will guarantee the seed we send you will entirely satisfy or your money back. Price, shipped in the ear, in bushel crates, seed tested, $5 per bushel. A bushel will plant six to seven acres. Can you make a better investment? Order today. Address

GALLOWAY BROS.-BOWMAN CO.,
Box S. C. H., Waterloo, Iowa.

GOLD MEDAL SEED CORN

PURE-BRED Reid's Yellow Dent only $2.50 per bushel in the **ear.** Extra Select, 4 grains tested from each ear, $5 per bushel. I grow and handle every ear and sell on approval. Address **W. P. COON, Seed Corn Specialist, Ames, Iowa.**

A. E. STONEBROOK'S Ever-bearing Americus Strawberries, continuous bearers from spring till fall, dozen, $1.50; 25, $2.50; 50, $4.50; 100, $8. Four summer varieties Dunlap, Warfield, Champion, Pecoma, 75c per 100, 300, $2. Hampton, Ia.

FINE SEED CORN C. O. D., freight or express. Catalog delayed, therefore lot Reid's Yellow Dent cheap, tests 97-100; $3.50 seed $1.90; extra select $5 seed $2.75. Elmdale Farm, R. R. 8, Carthage, Ill.

Get This Big Help!

Don't do *all* the work yourself. Harness your farm to a team of French Dry Batteries.

For a *few cents* you can save hours of time, miles of steps and a pile of dollars. The convenience and luxury of electricity is at your hand ready for instant use *all the time*, summer or winter, rain or shine.

Just the pressure of a button or a twist of the wrist and presto! the gasoline and automobile engine is started; both party and exchange lines of the telephone are working; gates and doors are opened; call bells are rung, and scores of other duties are performed by the aid of

The marvelous French Dry Battery delivers a strong current of electricity for a *long* period. They are scientifically constructed packages of electricity. Poor quality batteries give a weak current for a *short* time.

Don't Take Imitations

French Dry Batteries are imitated the country over. Most batteries *look* alike, but in service and satisfaction there's a vast difference. So be careful. Insist on *genuine* French Dry Batteries. If you want to learn of *all* the ways French Dry Batteries can help you do your farm work, send your name and address at once. It brings *all* the facts.

HOW TO FEED CHICKENS.

Of the methods tried and found successful at the Maine Agricultural Station for the feeding of incubator chicks the following is liked best: The mixture for two or three days following the twenty-four or thirty-six hours that must elapse consists of fine beef scraps, one part to six parts rolled oats. This must not be moistened. It is fed with grit, on the brooder floor, preferably on a clean board.

When the chicks are three or four days old they are fed a mixture of hard, finely broken grain, early in the morning. This consists of:

Fifteen parts of cracked wheat, ten parts of granulated oatmeal, fifteen parts of fine screened cracked corn, three parts of fine cracked peas, two parts of broken rice, five parts of chick grit and two parts of charcoal (chick size).

Any dry commercial chick feed may be substituted for the broken grains mentioned. In fact, when only a small flock is raised the commercial feed is more convenient, and when the labor of mixing is taken into account, almost as cheap. Get sharp, fine grit and chick charcoal with your commercial product.

At 9 o'clock they are fed a mixture having the following composition:

Four parts wheat bran, half part of linseed meal, three and one-half parts of cornmeal, two parts of screened beef scraps, one part alfalfa meal.

This mixture is scalded and then dry rolled oats are mixed with it in the proportion of two parts rolled oats to six parts of the mixture. The reason for mixing in this way is that it has been found by experience that if rolled oats are mixed with the other materials of the mash before scalding there is a tendency for the mash to be soggy after it is wet.

The mash is fed in plates with low rims, and is left before the chicks about five or ten minutes, never more than ten. At 12:30 the hard grains are fed again, and at about 4:30 or 5 the dry meal mash mixture of fine beef scraps and rolled oats is given to them for half an hour, or left until their bedtime. The last meal being dry, the chicks cannot eat it readily and the danger of overeating need not be feared.

The meals are given to them in quantities enough to allow them to fill up in a short time. So that they will have a rest between time and come up for the next meal with a keen appetite, give them only enough to satisfy them for the time being. If they have been overfed at the previous meal, or grain has been left in the litter, they do not care for the feeds coming. The watch on them should be sharp, because if overfed a few times they become debilitated and sometimes worthless.

This method should be employed until the chicks are about three weeks old. From three to six or eight weeks the composition of mash is as follows:

Two parts wheat bran, three parts cornmeal, half part linseed meal, one part daisy flour, one part beef scraps.

By this time the weather is warm enough to give them free range, and they are pretty well able to eat according to your own way of feeding, which for a month or so should have as a base, in the matter of grain, cracked corn and whole wheat. Hulled oats are good, too.

SUCCESS THAT FOLLOWS PERSISTENCE.

(Continued from page 3.)

most an exclusive extent. He has converted nearly the entire Poland China raising fraternity to his way of thinking and doing, and that merely by keeping on in his own way without regard to what the other fellow was doing. When Peter Mouw had established the merit of his hogs an alert newspaper man, looking for adjectives that had not been worn threadbare in hog description, dubbed them the "big type." The aptness of the expression touched a popular chord, and soon every breeder who wished to impress upon his patrons that his hogs had size used the words so freely that they now stand merely as a hackneyed expression.

The man of whom we write has won a world-wide reputation and his financial reward has been a liberal one. His farm is a great one, with substantial improvements. It carries a herd of pure-bred Hereford cattle that have also gained a reputation for having size, and a flock of superior Shropshire sheep.

The following is taken from the Woman's Home Companion: "Ferrets are more remunerative than either white mice or pigeons, as when they are about two months old they are ready for the market, and bring $4 or $5 a pair. These little animals breed twice in a season, and have from five to fourteen in a litter. They are as easy to raise as cats, and make pretty pets. A small boy, whose grandfather made him a Christmas present of three female ferrets and one male, cleared over $200 last season."

You Can Have This Brilliant, Dependable Light for Less Than You Now Pay for Poor Light.

Why use a carbide generator and pay just as much, if not more, for the poor light you get, as if you were enjoying the cleanliness, convenience and satisfaction of Prest-O-Lite?

Brilliant, Convenien., Dependable Light

With Prest-O-Lite you have a brilliant light that turns on and off like a gas jet at a cost no greater, usually less, than carbide to feed a generator. Nothing to freeze in winter. Nothing to clean out or adjust. No matter how rough the road, the flame is always steady. The road is flooded far ahead with a clear white light, that shows you ruts and bumps even better at night than you can see them in daytime.

New lamps not needed. If you are now using a generator, your present gas lamps will serve for Prest-O-Lite. Even the same rubber tubing can be used.

Prest-O-Lite Costs Little to Buy and Little to Use.

Size "E" Prest-O-Lite only costs $15, and this must not be regarded as money spent. When you've exhausted a Prest-O-Lite you exchange it for a brand new one, paying only a small exchange fee. This exchange fee is no greater than you would pay for carbide to give you an equal amount of light from your lamps using a generator.

Remember, a Prest-O-Lite **never** becomes second-hand. It can always be sold for about what you pay for it. In addition to this, you use without trouble or waste, the most economical and dependable light money can buy.

Prest-O-Lite Is Better Than Any Other Light.

Prest-O-Lite is as simple as it is efficient. There are no delicate wires or connections to jar loose and break. No expensive repairs or adjustments are ever needed. No aggravating delays and expense waiting for expert mechanics to come from the factory to locate any trouble. Prest-O-Lite is the only system of brilliant automobile lighting in which you can have perfect confidence.

You can even have the convenience of lighting your lamps from the driver's seat if you wish. There are several automatic lighters (we make one) that will light and extinguish your gas lamps from the driver's seat, with the utmost ease and convenience. The expense is small.

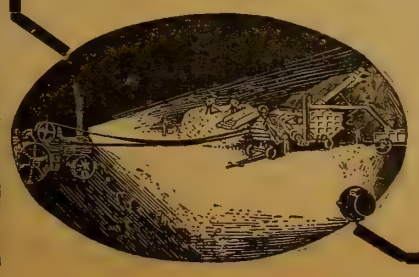
Remember, one single repair on any complicated, unreliable system might easily cost you more than five years' use of Prest-O-Lite. Don't be misled into thinking you can get light for nothing.

Prest-O-Lite Exchange Service.

If you have any doubt of your being able to obtain Prest-O-Lite exchanges conveniently, write us. Or consult our nearest dealer. There's one in every city and town and in most small villages. They will gladly arrange to take care of you.

Farm Uses of Prest-O-Lite.

Whenever night catches you with some important bit of farm work unfinished you can set up your Prest-O-Lite on the spot and continue working in a light as bright as day. You'll never realize the full advantages of Prest-O-Lite until you have depended on it in some emergency.



Try It Thirty Days FREE.

Any Prest-O-Lite dealer will equip your car with Prest-O-Lite and let you use it 30 days. If at the end of that time you find you can do without Prest-O-Lite he will take it off your car and cheerfully refund your money, and the light during the 30 days shall cost you nothing.

Write today for full particulars on Prest-O-Lite, our automatic lighter and "Light on the Lighting Problem," yours FREE on request.

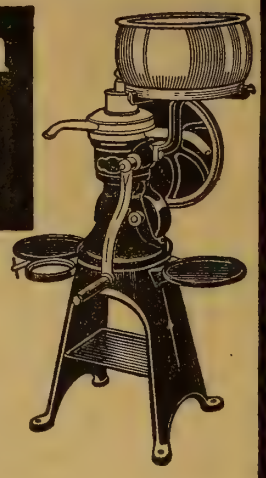
Farmer Onswon on Cream Separators



Talk No. 2—Close Skimming

I've already told how I saved $35.00 by buying the high grade Beatrice Separator. But price alone did not control me. I saved the $35.00 and got every good feature that you get in any separator.

Take the most important point of all, close skimming. My Beatrice gets all the cream.

Time and again I have tested it. I let the skimmed milk stand for 24 or 36 hours, even until it gets to be clabber, and I never find even a trace of cream on it. That's close enough skimming for me.

There are a lot of other important things—easy cleaning, big capacity, durability, etc. I want to take them up separately. The Beatrice has the advantage on every one of them. Watch for my next talk.

But right here I want to say the Beatrice Separator is a wonder for keeping "always in order." Nothing ever seems to go wrong. And if repairs or extra parts are needed you can get them quick at a much lower price than on other separators.

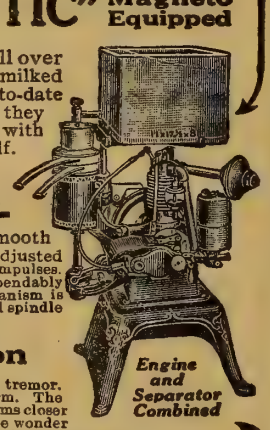
My advice: Talk to a Beatrice dealer, or write direct to the manufacturer. Address nearest office.

BEATRICE CREAMERY COMPANY

Chicago, Ill. Lincoln, Neb. Des Moines, Ia. Dubuque, Ia.

Self-Powered "AUTOMATIC" Magneto Equipped

is displacing thousands of hand power machines all over the country. Wherever ten or more cows are being milked cranking a separator is a back-breaking grind. Up-to-date dairymen won't put up with it any longer, not when they find out that the work can be done quicker and better with gasoline power compactly built into the separator itself.



Engine and Separator Combined

Engine and Separator Combined

In the "AUTOMATIC", engine and separator form a smooth running unit. They are so solidly combined and so nicely adjusted that there isn't a chance of jolting the separator by explosive impulses. The engine is only ½ horse power. Magneto equipped—starts dependably in all kinds of weather. And won't balk. The separator mechanism is gearless. There is nothing about it to get out of order. Patented spindle bearings enable the bowl to spin for hours

Without A Trace of Vibration

Put your finger on the swift spinning bowl. You won't feel a tremor. And the skimming is absolutely even because the speed is uniform. The "AUTOMATIC" never gets tired or slackens speed. It therefore skims closer than any hand power machine. No butter fat is lost. See this little wonder in actual operation at your dealer's. Then you won't go on cranking a separator any more. If you're milking ten cows you can't afford to. Give us the name of your dealer. Write for catalog 7

STANDARD SEPARATOR COMPANY, POST OFFICE BOX K33 Milwaukee, Wisconsin

Clip All the Wool

and get longer, better wool that will bring the highest price.

PRICE $11.50

You can easily net from 15c to 20c more on every sheep you shear with a Stewart No. 9 Machine. Don't labor with hand shears, in the old, hard, sweaty way. Don't have aching, swollen wrists. Don't scar and disfigure your sheep with uneven shearing and spoil the wool with second cuts. Take off the fleece smoothly and quickly in one unbroken blanket with a

Stewart No. 9 Ball Bearing Shearing Machine

It's the most perfect hand operated shearing machine ever devised. Has ball bearings in every part where friction or wear occurs. Horses, Mules and Cows. They are healthier and render better service. When the heavy coat that holds the wet sweat and dirt is removed, they are more easily kept clean, look better, get more good from their feed and are better in every way. The best and most generally used clipper is the

Stewart Ball Bearing Clipping Machine

It turns easier, clips faster and closer and stays sharp longer than any other. Gears are all file hard and cut from solid steel bar. They are enclosed, protected and run in oil; little friction little wear. Has six feet of new style easy running flexible shaft and celebrated Stewart single tension clipping head.

PRICE $7.50

The Saginaw Leads!

Now that wood Stave Silos are everywhere considered better than cement, tile or metal, the question arises, "Which wood stave silo is best?"

If this question were put to a vote among dairymen and stockmen the Saginaw would win by a tremendous plurality.

Think what it means to have a silo that has—(1) All Steel Door Frame; (2) Patented Inner Anchor; (3) Patented Base Anchor; (4) Patented Angle Steel Rib; (5) The Spline-Dowel. With all these patented features it's no wonder the Saginaw can't twist, warp, collapse, cave in, shift on its foundation or tilt. Built like a Big city Skyscraper.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

DEVELOPING THE BUTTER HERD.

To the Editor of The Homestead:

How to reduce the cost of producing a pound of butter fat without lowering the quality of the product is a question of vital interest to every dairy farmer who is building up a herd of butter producing cows. What we want is a cow which really produces milk containing a high per cent of butter fat and which at the same time answers all of the purposes we demand in a first-class dairy cow. Is it the Jersey or Guernsey, the Ayrshire, or the Holstein-Friesian?

The fat per cent differs in the various breeds. Thus the Jersey and the Guernsey cattle have a very high per cent of fat, often above 5 per cent, the Ayrshire 3.8 per cent and the Holstein-Friesians 3.4 per cent. It is largely breed peculiarities which cause this wide difference in fat per cent, but very often it is the selection of calves, because breeders have been striving to develop their herds with either one or the other quality in view. The Hollanders have been increasing the milk flow because they wanted more milk and more cheese, selecting the calves from cows which gave most milk and paying no attention to the richness of the milk. On the other hand the Jersey and Guernsey breeders have appreciated the butter fat the most. In their native home the Ayrshires have been developed for both butter and milk and stand between these two extremes as milk and butter producers. At the present time the Holstein-Friesians are giving the Jerseys and Guernseys a hard fight for the position as the best dairy cows in the world.

Since the Babcock tester came into general use the breeders of the Holstein-Friesian cattle have been improving their herds along butter producing lines. Not alone in this country but in Denmark the best breeders are selecting calves from their richest milking cows, and by breeding the heifers to bulls only from rich milking families they are each generation adding to the fat per cent of the milk. In the light of recent investigations it would seem that the Jerseys and Guernseys have about reached the limit of their development in the production of milk rich in butter fat. The fat per cent of the Holstein-Friesian breed is at present about 1.5 per cent lower than the Jersey or Guernsey, but recent experiments show that it is possible to gradually increase their fat per cent. This together with the fact that they already excel in milk production is very good evidence that the breed possesses great development possibilities.

The admirers of Jerseys claim that the Holsteins are too large and eat too much, but, on the other hand, the conditions on farms where butter is produced demand a large, vigorous cow that has great storage and digestive capacity to enable her to consume and economically convert large quantities of home-grown forage and fodders into milk and butter fat. In this respect the Holsteins and Ayrshires seem to have an advantage over the smaller and more refined Jerseys and Guernseys. Each breed has certain advantages over others and when we consider these facts carefully and without prejudice it is difficult to determine which is the best butter breed. It is my judgment that it is more the man and the individuals he selects within the breed than it is in the breed. Some men will succeed with a herd where others would fail.

No matter which breed is selected, or whether a man undertakes to grade up his herd of common cattle, he must give them good care and plenty of nourishing foods. When we consider the conditions that surround the average dairy herd, we need not wonder that so many men fail to make the business pay. In fact the wonder to me is that many cows do not give up in disgust and die instead of producing as much as they do. Science is fast replacing the sentiment that hallowed around memories of "Old Brindle and Bess." Dairying nowadays is a cold business proposition.

To build up a good butter producing herd we must introduce new and im-

Less Labor-More Milk

YOU CAN CARE FOR A HUNDRED COWS WITH

LOUDEN DAIRY BARN EQUIPMENTS

EASIER THAN A DOZEN WITHOUT THEM.

Your cows will give enough extra milk to pay for the equipments in a few months. On one of the biggest dairy farms in the world this increase was 21%.

Louden's STALLS and STANCHIONS are sanitary, simple, strong and handsome. Keep the cows comfortable, healthy and contented so they will do their best.

Used by the U. S. Government and by more big, successful dairy farmers and breeders than any other. Low in price and permanent. Remember: these are the only really sanitary stalls. GUARANTEED to possess more advantages than any others. *See them at your dealer's or write us for catalog and full information.*

AMERICAN JERSEY CATTLE CLUB, 324 W. 23d St., N.Y.

proved methods of herd handling. Try to have good pastures and supplement them with green forage and ensilage when they are short and dry. In winter give the cows a good, warm stable, well-lighted and well-ventilated with plenty of sunshine. Feed them a ration of good palatable food and plenty of pure water, and then if they do not pay for their keep, look them squarely in the face and say, "Either pay for your keep or go to the canners." If they are good cows they will pay and if not you should be glad to get rid of them at any price. Cows of any breed should be made to produce two hundred and fifty pounds of butter a year, and this should be gradually increased until the herd will average above three hundred pounds a year.

After selecting the cows and providing them with a good stable and giving them good care, the next matter to be considered is how to handle the milk. It is a settled fact that the dairy farmer who is keeping more than eight cows and continues to do without an improved farm separator is standing in his own light.

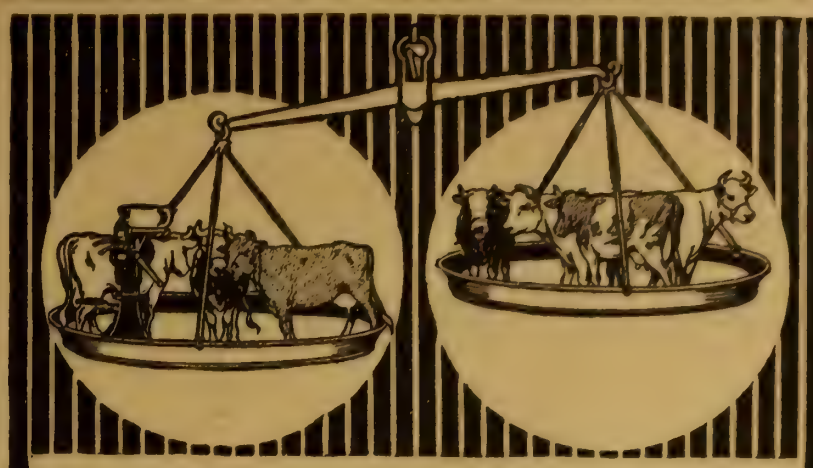
The best time to separate milk is when it is warm from the cow, and at this time any of the standard machines will do good work and remove the butter fat so closely that we need not worry. Another important point in separating is to have the machine adjusted so that the cream will be thick and rich, containing from 30 to 40 per cent fat. Cream separated in this manner will churn more rapidly and less fat will remain in the butter milk, besides the work can be done at a lower temperature. The great secret is to have the cream cooled as soon as possible after it is separated, to at least fifty degrees, and holding it there until a few hours before it is warmed up to ripen.

Now comes the question of ripening for as a general rule it is best not to churn the cream in an unripened condition. You will get good butter, but there are difficulties in churning that make it very intricate work and undesirable for any but an expert to undertake. In ripening the cream it is necessary that we take great care to avoid as much as possible all bad odors and flavors. Ripening cream means holding it at a temperature that is proper until the various kinds of bacteria have time to develop lactic acid, which aids in churning and gives the characteristic flavor to the best butter. Keep the cream until there is enough to make a churning, raise temperature to about 65 or 70 degrees and keep near this temperature until about ripe and then cool before churning. Well ripened cream should thicken and run like oil and have a gloss on a fresh surface. If the ripening process has gone too far it is impossible to make finely flavored butter from it. Never mix sweet and sour cream. Half ripened cream neither sweet nor sour will churn very hard and make very poor butter. If sweet cream is churned use it when perfectly fresh.

The churning of well-ripened cream is one of the simple arts of butter-making. Churn at such a temperature that the butter will come in from forty to sixty minutes when the churn is not more than one-third full of cream. This gives better butter than when it comes more rapidly.

Use water at a temperature of forty to forty-five degrees in cold weather, allowing for the season, solidity of the butter, etc. Put salt in the churn and stir thoroughly with a wooden spoon. There is nothing more difficult in making good, even-quality butter than to get a uniform amount of salt in different churnings. If the salt is well-mixed with the butter it will need but little working. Press it just hard enough on any good worker to work out the surplus water and give it a compact texture. As a general rule it is preferable to move from the churn to the worker and then pack at once and avoid streaked butter. The butter maker should always judge for himself when it is worked enough.

Next comes the question of marketing the product and I believe this is the most important of all. When sold at the grocery it is not apt to bring its actual value. The trade is divided into four classes: the local dealer, the grocer, the private family and the hotel trade. I would not depend upon the first two named, except the gro-



Three cows and a DE LAVAL CREAM SEPARATOR will make more money than four cows with gravity setting

Thousands upon thousands of cow owners have already proved this statement; any experienced dairyman will verify it for you.

With such a big saving it is hard to understand why any cow owner should try to get along without a De Laval Cream Separator.

If you are selling cream or making butter, and have no separator, or else an inferior machine, we know if we could put a De Laval on your place we would be doing you a personal favor.

If you haven't a separator don't make the mistake of starting with a "cheap" or inferior machine. When you do buy a separator—as sooner or later you surely will—be sure to get the best—the De Laval.

Remember, you can't make money by trying to save money in the purchase price of a cream separator. A De Laval costs only a little more than the cheapest and will save you twice as much and last five to ten times as long as other separators.

ceryman who has a select trade among the best city consumers who depend upon him for certain brands of butter. In that way he will give you a good price for your product and it will be a nice trade to handle. Of course the private family and hotel trade pays the best, but it is a critical and exacting trade to please and look after.

L. J. M.

REPLENISHING THE DAIRY.

To the Editor of The Homestead:

I had a long talk with one of the leading dairymen of our country the other day. He said that he owed the greater part of his success to the fact that he raised the heifer calves, from the best cows in his herd, to take their place in the dairy. He prefers to do this because good dairy heifers are very hard to buy and by rearing the home product he is able to bring it up just the way he thinks a dairy calf should be reared. He claims that many animals of good blood and natural ability as milk producers do not attain their best because they were not properly cared for when developing. Much of the future worth of the cow is determined in the first year or two of its life. If underfed, it will be stunted and undersized and if dirty and lousy it will be nervous and depleted. A calf, no matter how gentle by nature, will develop into a very vicious cow if constantly whacked and cursed when young. A vicious unreliable cow, no matter how large a producer, is not worth keeping in the dairy herd.

This man likes to use skim milk in growing the calves and recommends it highly. He even says that when the milk is sold that it pays to keep enough for the calves. While he recommends skim milk he cautions against using it too freely, especially while the calves are very young and their stomachs unable to use it all as it causes scours. The calf is taught to drink, sweet whole milk being given for the first week, after which sweet skim milk is gradually substituted. Care is taken that the milk when given is not more nor less than the exact temperature of calf's body. This, he says, is very important. In about two or three weeks the calf will begin to nibble and the best green stuff or hay on the place should be given to encourage them. Fresh air, sunshine and exercise are excellent health promoters and should be available for all stock.

He does not believe in breeding the heifer until two years old, for if bred before mature the result is an undersized calf and the cow herself is stunted. As soon as a heifer comes to be producing normally her efficiency is tested and if she falls below standard she is sacrificed at once. By these methods he succeeds in maintaining a dairy herd of a very high standard.

C. J. Griffing.

CARE OF THE MILK HOUSE.

To the Editor of The Homestead:

On the door of the milk house on a farm where market milk of a high degree is produced there is printed: "No admittance while milk is being cooled or bottled." The rule as stated is not merely a decoration for the door, but is a rule that is very strictly enforced each morning and evening when the milk is being cared for. A moment's reflection shows the wisdom of the manager in enforcing such a regulation. All reasonable precaution is taken in the barn to secure clean and wholesome milk. It reaches the milk room with having had very little exposure to possible contamination or to any atmospheric taint. In the milk room while the milk is flowing over the cooler there is its greatest exposure to the atmosphere. Should the air in the room in which the cooler hangs be anything but pure the milk surely would absorb some of the impurities. Suppose there should be disease germs in that room. Certainly many of them would be caught in the milk. Should a person afflicted with anything contagious enter the room it is highly probable some of the germs would be drawn into the milk and be transferred to the human being who might later consume the milk.

Aside from disease germs and the possibility of their getting into the milk there are the more ordinary forms of filth and foreign matter to be guarded against. A person coming in off a dusty road or from the barnyard or garden has material upon his clothes that ought not to be shaken off in a milk room to more or less pollute the milk. Truly the rule on the milk house door. "No admittance while the milk is being handled" is a good one.

To keep people out during that time is not in itself sufficient, however. The milk house must itself be clean. To be clean it must be light. Not an electric bulb which will furnish light with which a man can do his work, but lighted with sunlight which kills germs of any and all kinds and purifies the air. For sunlight to get into the milk room there must be large sashes of window glass. It is impossible for a milk house to have too much glass. That is not sufficient. The milk house should be located where sunlight can get at it and not on the shaded side of some other farm building. One must go farther than merely providing for the entrance of sunlight. The place must be kept scrupulously clean. For the place to have a cement floor and cement walls means much in the thoroughness and ease of cleansing.

Ordinarily the milk house or some part of it is the place where the utensils are washed and cared for. How elaborate an equipment can be provided for that purpose just as in all other features depends upon the size of the herd and many other factors. Thorough cleansing can be done only by the use of hot water and steam. On farms where genuine certified milk is produced every utensil and each and every bottle is scalded thoroughly or else sterilized in a dry oven to kill all germs that may have gained lodgment. Along with cleansing the utensils the possibility and use of sunlight as a disinfectant must not be overlooked. Not many, perhaps, only a few have steam in their milk houses, yet there is probably no one who does not have access to sunlight. It is always a pleasing sight to see cans and pails racked up on the south side of the milk house where the sunlight has unobstructed opportunity to disinfect them thoroughly.

The place for storing the milk is quite an important feature. The lower the temperature the less the bacterial development. Hence it is essential to keep the milk at as low a temperature as possible. In our western states and to some extent in eastern sections men have cool flowing spring water at a temperature of fifty or slightly above. Such is well nigh ideal and any farmer or dairyman who has such a supply of fresh, cool water is fortunate. The certified milk producer uses ice and if he is conscientious he will use only artificial ice on account of the danger of transmitting disease through the use of pond ice. For the ordinary farmer to have a milk vat or tank in which the cans may be set and to have all the water that is pumped pass through the tank is the most practicable plan to follow. If the water enters at the bottom and passes out at the top greater benefit will come from its cooling effects. Whatever the cost, whatever the style of construction, whatever the methods used for cleansing the whole should lead toward purity and wholesomeness of product.

H. E. McCartney.

ALLOWING THE BULL TO RUN.

To the Editor of The Homestead:

A recent issue of your paper contained an article on "Handling the Bull" in which it was stated that a bull should never be allowed to run with the cows and but one service should be allowed. I agree with nearly everything this subscriber says except this, and I would like to ask why it is that when a bull is not allowed to run with the cows or to serve one up until the time he is two or three years old, he is entirely unfit for use, especially at first. I bought one past two that was in good condition and yet I had to use my neighbor's bull. However, he got all right finally.

I believe that the bull should be used at about one and one-half years of age with a few cows, say four or five. If only ten or twelve cows are kept a three-year-old bull can just as well run with them and no harm will result. It is almost impossible to keep a bull in an ordinary pasture unless one has a bull pen where they can get both feed and water. Some things are advocated in the papers which common people cannot afford.

EDUCATION FOR ALL.

(Continued from page 14.)

in any narrow sense of the word, but must be as broad as the field of the home in modern life. This should include some training in art and music.

Fifth—Agricultural winter schools. There are some special features to be mentioned in connection with this special type of schools as planned for youth in the country. These youths are not able to attend school during the entire ten months of school instruction in the ordinary town or city. They must put in the summer months in work on the farm. These schools should be open for five or six months of the year, in the daytime, and should furnish industrial, business and agricultural training.

The courses should be two years in length, and the vocational subjects should be taught by men and women, trained technically and practically in agriculture. During the summer months such men or women should be employed as itinerant teachers in visiting the students of the school at their home work on the farms, in consulting with and advising parents on scientific and business questions, and in giving lectures and demonstrations on practical subjects connected with farming.

In addition to the itinerant teachers from the agricultural winter schools, there should be a permanent staff of itinerant teachers who give special scientific advice and instruction to the farmers of the district served. These teachers should specialize in some line of agricultural work, such as live stock, small grain, swine, dairying, horse raising, bee keeping, garden vegetables, fruits or business. One of the principal advantages of this system of schools over the ordinary agricultural departments in high schools is the close touch between teachers, pupils and parents—both in the school and on the farm.

In connection with such agricultural winter schools there should also be conducted evening agricultural continuation schools for persons older than eighteen. Such classes should be under the same general management and direction as the agricultural winter schools, and should be supplied with practical teachers. The courses, in addition to some academic work, should pay especial attention to the academic, technical and business needs of the pupils to be served.

These schools will necessarily be day schools, managed by specially trained teachers, seeking special practical ends, and treating subjects as they are related to the vocational life of the pupils. They must, therefore, be administered and controlled largely by men and women from practical life for whom and with whom the youth will be associated in vocational life. As these schools are radically different from the ordinary ones in purpose, methods and scope of work, special machinery must be provided for organizing and administering them. These schools aim at vocational efficiency and can secure it only by the closest possible co-operation of the persons carrying on the vocation—the employers and the employes. As the vocation is the center of interest, rather than any subject or subjects, persons must administer these schools who know the vocations from the standpoint of both employer and employe.

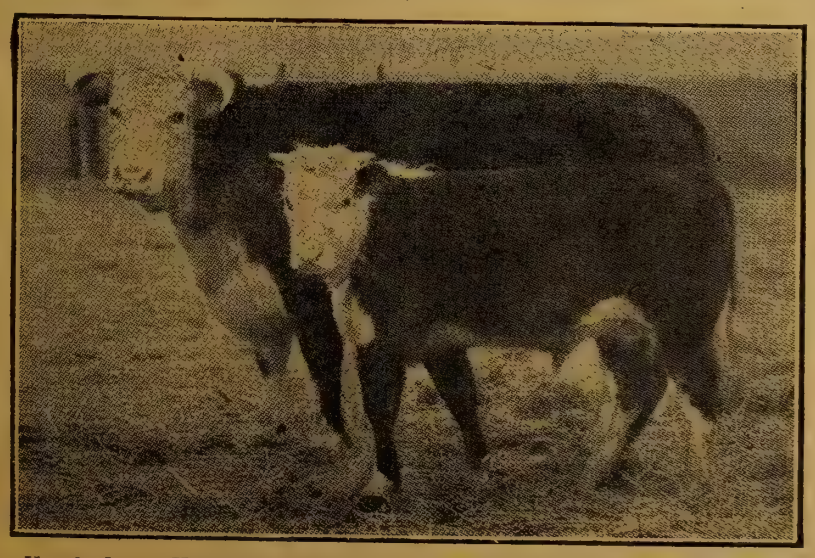
VETERINARIANS PASSING ON STALLIONS.

To the Editor of The Homestead:

In a recent issue of your paper I noticed a small item written by Mr. P. F. Smith regarding the Iowa stallion law, and will say that I have handled stallions more or less all my life and do not recall a single instance when I had an unsound horse, but what the general breeding public knew it. As to the veterinarian's affidavit, I can show you veterinarians who can hardly tell a sidebone from a wire mark and I think it will be some time before the average book-learned student can compete with the average successful horse breeder when it comes to telling the public what to breed to.

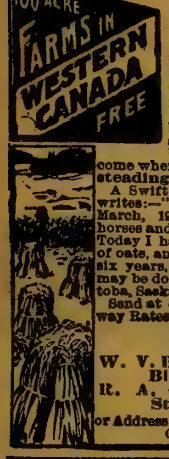
I think as Mr. Smith says, that this little money-grabbing scheme has done more to hurt our horse industry than any one thing that ever existed and, to frost this little dessert, I noticed while visiting last summer that about 70 per cent of the horses in Floyd, Howard and Mitchell counties were standing the same as ever without this iron-clad guarantee issued by our unquestionable veterinarian or even themselves, and would like to ask the department of agriculture if these are just some pets, or haven't they heard of this law? I have retired from the business, but say tax all or none. Law is law. James Pratt.

The character of the food frequently influences the quality of the butter. The white hard, tasteless character of winter butter results from the food given. Fresh pasture, bright legume hays, corn silage and soiling crops give color to the milk and to butter. gluten or corn produces a soft butter. Wheat bran makes a harder butter than either. If much of gluten is introduced into a ration the butter will be soft, but its hardness may be improved by the use of cottonseed meal, a feed that makes a very hard butter. By mixing the two a better grade of butter will be obtained than if either is used alone. A pound or two of cottonseed meal when the cows are on pasture helps to counteract the objectionable softness of butter during the pasture season.



Hereford cow Handsome Lady and bull calf. One of the good things included in the dispersion sale of Taylor & Welty, Wanatah, Ind., April 29th.

YOUR OPPORTUNITY
Is NOW in the Province of
SASKATCHEWAN
Western Canada



Do you desire to get a Free Homestead of 160 Acres of that well known Wheat Land? The area is becoming more limited but no less valuable.

New Districts have recently been opened up for settlement, and into these railroads are now being built. The day will soon come when there will be no Free Homesteading land left.

A Swift Current, Saskatchewan farmer writes:—"I came here on my homestead, March, 1906, with about $1900 worth of horses and machinery, and just $35 in cash. Today I have 900 acres of wheat, 300 acres of oats, and 50 acres of flax." Not bad for six years, but only an instance of what may be done in Western Canada, in Manitoba, Saskatchewan or Alberta.

BARGAINS in the clover and dairy belt of central Wisconsin, the clay soil; we have large and small farms, also tracts of unimproved lands. Write for our free list. Address A. Kleinheinz & Son, Marshfield, Wisconsin.

NEW YORK STATE 100 acre farm; good buildings. 3 miles from village and railroad station. Rich, level land. Price $4,500. Gregory, Newfield, New York

Double Dairy Profits
In Montana

Your cows will pay you twice as much in Montana as they do now. Prices in the Northwest for butter fat are from 3 to 7 cents higher than in the East. The market is nearer—climate better—water purer and the rich virgin soil produces more and finer fodder.

Ideal pasture land is everywhere and costs little.

The local demand for dairy products is greater than the supply.

Now Is Your Chance

Don't waste another year. Take your savings and go to this wonderful new country, where Nature works with you instead of against you.

Special low fare one-way settlers' excursions every Tuesday until April 29, and low fare round-trip homeseekers' excursions on the first and third Tuesdays of every month via the

Keep Railroad Time in Your Pocket

"Railroad time" is *accurate* time. Railroads spend thousands of dollars a year to keep their employes' watches correct. But few makes of watches can meet the requirements. All South Bend watches keep railroad time.

This is the watch that takes six months to make and another six months to test before it is what we call *pocket-fit*. Each must keep perfect time in a refrigerator and in an electric oven. Each must "make good" under 411 inspections and the master inspector's tests.

You need such a watch in catching trains, keeping appointments in town, going in from the fields for dinner, getting up in the morning, and doing countless things each day.

The South Bend is *sold* only by *expert retail jewelers*—never by mail. You get the jeweler's *regulation* with the South Bend. That is important, for watches don't run the same for everybody. They must be regulated to the buyer's personality. Ask the jeweler why.

Write for our free book, "How Good Watches Are Made." If you are going to buy a watch now or in the future, you owe it to yourself to first get this book.

THE SOUTH BEND WATCH COMPANY

WITH THE EDITOR.

"Oh, we can afford to stay longer so far as that goes—the trouble is Martha hates to spend the money on the chance of my getting better." The man who spoke was a farmer, at a sanitarium seeking relief for chronic indigestion induced by hasty eating and overwork. "You see money comes slow when you make it on butter and eggs and watching the markets for the rise or the fall of a cent—sometimes of half a cent. It's made Martha close. I was just as bad if not worse until this miserable stomach trouble got hold of me. It's given me an advantage over Martha. It's taught me things she hasn't learned yet."

How many people are like Martha! Where dollars "come hard" they acquire an undue importance. When a man plows and harrows and seeds and cultivates and harvests through all sorts of weather, sometimes with aching back and sometimes with anxious heart it is small wonder that he values the dollars his crops sell for.

In his quaint way David Harum voiced a general experience when he said: "Trouble with me was that till I was considerable older'n you be I had to scratch gravel like all possessed, and it's hard work now sometimes to git the idee out of my head but what the money's wuth more than the things I want."

To have reached "easy street," to have the wherewithal to gratify all reasonable wants, and to grudge spending for anything but bare necessities—what a fate! Alas, that it is one which so often befalls the farmer. It is this which so often accounts for overworked, discontented farm wives, for farm sons and daughters denied proper educational advantages, for shabby little farm houses that never saw paint and contain next to no furniture, for unkempt farm yards devoid of fence or tree or shrub or flower—in a word, for ceaseless grind and the absence of the ordinary comforts and refinements of life.

And how foolish it all is! What is the use of money but to secure the things which add to the happiness of life. To quote David Harum again: "We're here today and gone tomorrow, an' the' ain't no pocket in a shroud." Why not have a comfortable home? Why not take life easier and make it easier for others? Why not?

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

I cannot feel that thou art far,
Since near at need the angels are;
And when the sunset gates unbar,
Shall I not see thee waiting stand,
And, white against the evening star,
The welcome of thy beckoning hand?
—Snowbound.

If you have a friend worth loving love him. Yes, and let him know that you love him, ere life's evening tinge his brow with sunset glow.

It is a good thing to be rich, and a good thing to be strong, but it is a better thing to be loved of many friends.—Euripides.

APRIL.

Under the soft snow blanket
They have slept all winter long
With the stars keeping watch above them
And the winds for their slumber song.
But now the soft rains are calling
The lazy blossoms to rise,
And the sun, as they slowly answer,
Kisses open the sleepy eyes.
—Bertha M. Bemis.

BEFORE LAYING CLOTHES AWAY.

All clothing which is to be stowed away for the hot weather should be put in perfect repair first. Set the necessary patches on the flannels that with mending may last another season, darn the woolen socks and stockings, replace the worn skirt braid on the heavy walking skirt, mend the torn lining of the thick coat and do whatever else is needed to put the garments in complete repair. It may be a nuisance now when the spring rush is upon you, but when the cold weather comes again, and you are in a hurry for warm garments, it will be an unspeakable comfort to find them in good condition.

TO CLEAN WALL PAPER

The only way to clean your wall paper according to a certain woman, is also a new way. Boil a quart of water. Let it get cold. Boil it up again and when quite boiling shave half a toilet-sized cake of pure, fine, white soap into it. As soon as the soap is dissolved and while the water is still almost, but not quite boiling, stir in flour slowly until the whole is a thick paste. Let it cool. If the mixture is not now the consistency of dough add more flour to make it so. Separate it into pieces convenient to handle. Begin at the top of the wall and work down in long parallel strokes. As the mixture becomes soiled fold in the dirty part and begin again with a clean surface.

FOR THE COOK.

Nut Croquettes.—Mix together one cupful of very finely chopped nuts and one cupful of bread crumbs. Bind together with a beaten egg. Form into small balls and encase them in seasoned mashed potato; roll in egg and crumbs and fry in deep fat.

Potato Puffs.—Season two cupfuls of cold mashed potatoes with salt, pepper, celery salt and chopped parsley. Add the beaten yolk of one egg and

sufficient milk to make it of the consistency to roll on a well-floured board. It should be one-half inch thick. Cut in circles four inches in diameter; place one tablespoonful or more of well-seasoned, chopped, cold meat, moistened slightly with gravy or stock, upon one-half of each, moisten edges with cold water, fold, press together and fry in deep fat. Serve hot.

Corn Meal Apple Bread.—Sift one quart of corn meal with four tablespoonfuls of baking powder and one-half teaspoonful of salt. Add one-half cupful of sugar, four tablespoonfuls of melted butter and one and one-half cupfuls of water; then beat in one pint of chopped apples. Mix thoroughly and bake in greased pans in a hot oven for twenty to thirty minutes.

AMONG OURSELVES.

With much pleasure I give first place on our program to Mrs. E. J. H. Bedford, who, having eyes to see, delights in the beauties of the springtime:

What a privilege it is to live now, of all times of the year, when the earth is renewing itself. To be sure, this renewing has been going on, silently for many months, but no mortal eye is allowed "behind the scene," until all is ready, then without the pomp and noise and ceremony that usher in men's affairs, we mortals behold one of nature's pageantries. The only heralding is on melodious bird lyres and gauzy wings. But to those who are attuned to nature then it is a most spectacular event. It is only the "opening of the season," in theatrical language. On through May and June, July and August and September, the plot will be developed. There will be changing scenes and nature's drama will not grow monotonous. The choruses and orchestras will produce music sweet and low, to the tune of bird songs and humming bees and rustling leaves. Yes, it is a privilege to live at such a time and especially to live in the country where only this thrilling event can be seen and heard and felt in its full and quiet splendor. I am a farmer's wife—a country woman. In my childhood I revered the sweet and sacred solitude of the woodlands; as I played under the protecting arms of the great trees, or, lying in the grass, in one of those sober moods that come to most children when the great beyond speaks to them, would wish they could speak to me. With a love and a reverence still for the woods and a feeling of awe in listening to the wind roaring in the tops of those great trees, as I listen to it in memory, I now love the glory of the western prairie, also. It seems painful that so many ("having eyes, they see not") can pass through the changing panorama of the seasons and yet find no joy, no content in country life. It is not all poetry, to be sure; very few lives, no matter where lived, are. I would like to speak of this problem in another paper, if I may, but just now there is so much we are about to miss unless we "look up and not down, look out and not in."

Those who miss seeing the springtime pageant miss one of the great sights of the year and one of the most inspiring. We will hope that if any Among Ourselves have been unseeing that they will no longer be so.

Mrs. M. M. Wichita has been thinking about husbands and wives and the pocketbook. We shall hear her conclusions:

I have read in different papers so many articles about husbands' and wives' rights to the pocketbook. I have no complaint to make against my own husband, but from observation some men are not as capable of doing the buying as some women, and vice versa. One woman, a relative, thinks all her egg money is for is just to buy extra dresses for herself and girls; they must have something new for every occasion. Her husband bought the chickens in the beginning and besides they are very poor. He can hardly make both ends meet, where if she would help it would be better. Fashion is all she can talk of. Still another, a neighbor, told me she would rather do without than ask her husband for things, even when she knew he would get them; that was just her peculiar way. I was of that turn, too. Always from a child I would not ask for things, but I have got over that. I just make out my list and tell my husband I need all I am sending for. I generally get it. I think each husband and wife ought to be able to settle these matters. I know lots of men are selfish and mean, even if they are well fixed. A sensible woman isn't going to ask for what she don't need—some don't get that. If we knew how some have to get along we would think ourselves fortunate indeed. A husband and father ought to see that the family have some kind of recreation; let the young folks have a party once in awhile. And do not find fault with them all the time; they will like their home all the better. I agree with Mr. Foote in what he says. I have a family of young people, so I know what I am talking about. I say teach the boys and girls how to buy and they will be better fitted to go out for themselves.

That last remark of Mrs. M. M. Wichita suggests a topic for discussion. We have never talked about the wisdom of giving the young people an allowance with view to their learning the value of money and how best to spend it. Do you think it a good plan, friends? Have any of you tried it? Let us hear from you.

A southern friend, Mrs. S. E. Junkin, of Frank, Ark., kindly comes to give us a canning experience:

I would like to give a statement of our ten-year-old girl who was in the tomato club last year. Each girl had one-tenth of an acre to plant to garden stuff. More planted tomatoes than anything else, but they planted what they wanted and thought most profitable. Our daughter planted tomatoes, beans, cabbage, carrots and quite a lot of small stuff, such as radishes, mustard, lettuce, etc. She canned her tomatoes, beans, cabbage and carrots, beets and okra. She sold $86 worth of canned goods. Cost of cans, $15; profits on one-tenth acre, $71. She had tomatoes in every way you could think of, put up in forty-two different ways. She won the first prize in the Pulaski County Fair and second in the Hot Springs State Fair. Her canner, complete with all necessaries, cost $9, and I will say right here that I could not do without it. It is the most useful article on our place. I find use for it every week in the year. On wash day if I had to give up my canner or my washing machine I would give up the machine. The canner is useful for any purpose you need hot water for. Besides the things our daughter put up we put up about $150 worth of fruits and vegetables from our farm. I can't recall the day when we bought a can of anything, but I could refer you to many cases where we have sold a nice bill of canned goods from our farm. If you want to solve the high-cost-of-living question, that so much is being written about, get a canner of the best make and take care of the waste of your place—that is where the profit of farming goes. We have made a success of canning and would like to offer encouragement to others and would like to have any device that I could give. I would be pleased to help them out.

This is a remarkable and certainly a stimulating story Mrs. Junkin tells us. Supplementing it we shall have a few words from a friend at Mountain Grove, Mo.:

In regard to home canneries: If anyone is interested in same they might write to Mr. A. Ashley, Durant, Miss. (They must say care of Castillion Springs or some other Mr. Ashley will get the letter.) Mr. Ashley has not used a canner, but the former owner's did. Mr. A. bought the farm and cannery and took possession February 4th. I took a car load of horses, mules and household goods from here for him and helped to invoice the goods on hand and among them was a lot of canned goods which were put up with the canner. I counted twenty-eight and one-half dozens three-pound cans of tomatoes and four and one-half two-pound cans of tomatoes. So you see they did a little with it. It was bought for $5, I think they told me.

Our Mountain Grove friend suggested to me privately that those interested in canning would do well to send to the agricultural department at Washington for a new bulletin, No. 52, which deals with this subject. After sending for this bulletin I wish the friends would tell us about it here Among Ourselves.

Alvin V. Rowe, Pres.

"Can't-Sag" Gates Save You BIG MONEY

Cost only one-third as much as ordinary iron, wire or gas pipe gates, but last twice as long. Neat in appearance—best and strongest gate made—light, easy to handle, opens both ways. Boards are double *bolted* between eight angle steel uprights and double truss braces. *guaranteed never to sag.*

Cost Less Than All Wood Gates—Last 5 Times as Long

Can't Sag Gates are furnished complete, ready to hang, or just the Gate Steels which include everything except the boards. Patent self-locking hinge feature—reinforced two piece malleable hinges. Six Triangular Truss Braces make gates extra strong.

Improved Elevating Attachment permits the gate to be raised full length from 5 to 30 inches, so small stock can pass under, and to swing over snow.

30 Days Free Trial and 5 Year Guarantee

Catalog shows both complete Gates and just the Steels, at prices you can't afford to miss. Send for my new catalog with free 30 days' trial and *freight prepaid offer.*

Remember you get the whole outfit of seven pieces for a little easy work. Write me today and I will tell you just how to get it.

A. M. PIPER, 304 Popular Building, Des Moines, Iowa.

THE YOUNG FOLKS

Letters and articles for this department should be addressed to Aunt Mary, Hawley, Minn.

A GOOD MAXIM.

When you can't do what you want to do, try to want to do what you can do.

SOME FEATHERED FRIENDS.

One day mama and I walked over to my brother's and on the way home I saw two pretty red birds. They are called the cardinal grosbeak. They don't go much farther north than the southern part of Iowa. There is another bird called the mocking bird, which will mock a cat, and will mock any other kind of a bird. They are brown and they build their nests in hedge rows. They will whistle like one will when calling a dog. There are a great many beautiful birds here. There is a little bluebird that builds his nest in rotten fence posts or old dead limbs of apple trees. When we hear them singing we think it is coming spring. There is a little bird about the size and color of a snow bird, only they have a bright red topknot and a little red on their wings. We call them cedar birds. They come through here every winter, and eat the berries of the wild cedars. That is why we call them cedar birds. We have the jay bird, robin, brown thrush, and once in a while we see a little humming bird flitting among the flowers. The next time I write I will tell you about an old Indian camp east of our place.—Marion Belle, Iowa, age 8.

A Flood Story.

Once when I was about eight years old, we lived by Deer Creek. One day in the afternoon it rained a little there, but farther up the creek there was an awful rain. In the night, papa awoke, and heard the water coming in the room. He called mama, and she got up to see what was the matter, and the water was half way up on the door and was coming in as fast as it could. We all got up and went upstairs, and when we took the bedding off the beds, the slats floated around on top of the water. Papa and my two brothers went out the upstairs door, for we couldn't open the bottom door, and they cut the corral fence and let the stock out; and they ran the buggy out of the shed and up the hill, for it was just ready to float away. After a while the water went down, but in the morning it was still up in the yard. There were some hogs and a horse washed down above the barn into the Little Deer Creek. We heard of lots of damage done by the flood. It washed our house till we had to build another one, and move out across the creek.—Dolly Girl, Nebraska.

A Flight In An Airship.

One evening I was sitting at the piano, playing "Moon Winks," when a fairy came and asked me if I would like to visit the moon in his airship. I consented, and we started, but as we went eight thousand miles an hour, and as I had left my goggles, we had to stop at Mars; but as everybody was fighting there, we hurried on as soon as we had bought the goggles. At last we reached the moon. The fairy introduced me to the "man in the moon," and he introduced me to his wife, the "woman in the moon." The "woman in the moon" gave us a good supper, and when the moon was full we started home, as we could see better. We came home by the "Milky Way," and some of the milk got in the gasoline, causing us to come downward at a rapid pace, striking all of the stars in our way, knocking them down. We caught sight of some lovers on Venus as we flashed by. When we hit earth the fairy said it would kill us. But as we hit a straw stack, it did not kill us, but stopped our watches, and caused a great earthquake. The shock awoke me, and I found myself sitting at the piano playing "Moon Winks." I had not been in an airship, but had been having the nightmare.—Bruce Douglass, Ohio, age 15.

Earn an honest reputation for making first-grade butter, and see if there isn't a ready sale for every pound you possibly can produce, and at a big profit, too!

PLEASANT FIELDS OF HOLY WRIT

Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON

2dQuar. Lesson 4, Gen. 37: 23-26. April 27, 1913.

JOSEPH SOLD INTO EGYPT—THE STORY.

The inevitable consequences of polygamy were upon Jacob. Even the blessing at Jabbok could not avert them. That experience, no doubt, made the patriarch more patient under his extremely trying circumstances. But his home, if it deserved the name of home at all, was rent with jealousy. Four wives and four sets of children kept the camp in pandemonium. Under the most favorable circumstances the rearing of twelve sons is an operose task. At the very time Jacob should have been giving his undivided attention and strength to it, he seems to have been chiefly engaged in outwitting Laban and accumulating a fortune. The result was he had a lot of unruly, wicked boys on his hands. On the dark background of this polygamous household the pure and artless character of Joseph emerges with most pleasing effect. He was the son of Jacob's later and better days. He was taken away soonest from the degrading influences of Padanaram. He was chastened by the greatest grief that can befall a young heart, a mother's death. The very frequency with which his surroundings changed was calculated to cultivate the devout spirit. From the thorny and thistly sons of Jacob grapes and figs could not be expected. All were rude, treacherous Bedouin. The gentle and pure character of Joseph was a standing stricture upon them. They were envious of his impending honor; ready to cry as their descendants afterwards did: "We will not have this man to reign over us." They nursed their jealousy until it reached the size of murder. Joseph had come to them on an errand of love from his father. It was a long and perilous journey from Hebron to Dotham. There were Bedouin and bears in the way. He had brought his brothers good viands. If there was to be any criticism of their conduct on his part, direct or indirect, it would be just, for their real advantage. But they allowed themselves to be moved with envy. Their utter heartlessness is shown in that they could sit down to the very banquet he had brought them, and eat it in sound of his wailing voice. There is an explosive power in a new vice as well as in a new virtue. Murder is ousted by avarice. The sight of the approaching trading caravan suggests the possibility of making merchandise of this obnoxious brother. A moment later they gloat over their two silver shekels apiece, and see their kinsman according to the flesh depart to ignominious and hopeless servitude. Naked and under a burning sun, with an iron collar about his neck and a lash upon his back, the heir of all the promises departs from the very land he was to have inherited. The prince is metamorphosed into the slave, Canaan exchanged for Egypt. From the human angle all is lost; but

God moves in a mysterious way,
His wonders to perform.

At the Kansas Agricultural college a secondary school of agriculture, mechanical arts and home economics will be established next fall to articulate with the eighth grade of the public school. A three-year course will be offered and a fourth year for those desiring to enter college.

Fine Prize Pony Given Away

You see in this picture a boy riding one of the splendid prize ponies I am going to give away. In other parts of the picture are the faces of several other boys. They are rather hard to find, but by turning the picture about you can see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send your name and address so I can tell you all about the contest in which you can win a beautiful pony and many other prizes.

1500 Votes Free

I will send you a special coupon good for 1500 votes toward the pony. All you have to do to get this coupon is to send your name and address at once.

A. M. Piper, 600 Popular Bldg, Des Moines, Ia.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

5501 Ladies' Six Gored Skirt.—This skirt is cut in six gores and has the closing at the left side of the back. There is a double under box plait at the lower part of each side seam and a forward turning plait at each side of the back gore.

The pattern 5501 is cut in sizes 22 to 30 inches waist measure. Medium size requires 4¾ yards of 36-inch material. Price of pattern, ten cents.

5630 Ladies' Apron or House Dress.—This garment can be used as a house dress or an apron. It closes at the left side of the front. It is made with low neck and short sleeves. Gingham, percale, chambray or linen can be used to make this garment.

The pattern 5630 is cut in sizes 32 to 42 inches bust measure. Medium size requires 5½ yards of 36-inch material with ¾ yard of insertion. Price of pattern, ten cents.

3869 Children's Sack Apron.—This apron is just the thing for the small child as it completely covers the dress. It can be made with high or low neck with long or short bishop sleeves. Gingham, linen or percale can be used to make this apron.

The pattern 3869 is cut in sizes 1, 3 and 5 years. Size 3 years requires 1⅞ yards of 36-inch material. Price of pattern, ten cents.

6032 Ladies' Dressing Sack.—This dressing ack can be made with either long or hort sleeves. Any of the pretty wash materials can be used to make this garment withthe trimming of cont rasting material.

The pattern 6032 is cut in sizes 34 to 42 inches bust measure. Medium size requires 2⅞ yards of 36-inch material with ⅞ yard of 27-inch contrasting goods. Price of pattern, ten cents.

4142 Ladies' Corset Cover.—This corset cover is designed for flouncing. It has the V-shaped neck, front and back, and is made with a seam at the center back. Longcloth or muslin can be used to make this corset cover or it can be made of embroidered flouncing.

The pattern 4142 is cut in sizes 32 to 44 inches bust measure. Medium size requires 2 yards of 16-inch flouncing. Price of this pattern, ten cents.

SECRET OF RURAL SUCCESS.

Glowing preliminary reports on the inquiry being made into the rural school system of Denmark were received by the United States Bureau of Education from its investigators. Prof. Harold W. Foght, of the bureau, accompanied by W. H. Smith, of Mississippi, and L. L. Friend, of West Virginia, is engaged in touring Denmark. He says the remarkable development of the country along agricultural lines is due to the education of not only the children, but the adults as well.

Denmark's "folk high school" system is given chief credit for the development. In these schools men and women are given opportunity to take up vocational studies eleven days in each month throughout the year. Other schools are maintained for the education of small farm owners, the principal studies being horticulture and kindred branches of agriculture suitable to intensive work.

In its statement the bureau says that Professor Foght's first-hand investigation in Denmark is only part of a widespread investigation that is being made into the question of rural schools. There are now three specialists at work in the United States carrying on the inquiry, their fields of action being so divided that the country is covered thoroughly.

OPINIONS ON CENTRAL HOG HOUSE WANTED.

To the Editor of The Homestead:

As I am going to build a double hog house 18x36 for brood sows I would like to hear from some brother farmers, who have built one like the one I contemplate, through this paper.

My plan is to build the walls of building tile, the floor of cement with a four-foot alley running through the center lengthwise of the building and a small gutter at each edge of alley. By giving the pen floors one inch slant the pens could be scrubbed and the water drained off into the gutter. I would also build a cement trough in each pen and at the end of the building a cement dipping tank.

Will some farmer who has a hog house like this tell me whether it is satisfactory or not?

Fred Massure.

Everyone wants one. Write quick for wholesale terms and prices. O-K. Brandt Lighter Co., 42 Hudson St., N. Y. City

European Farm Finance.

AGRICULTURAL credit in Europe is divided into two general subdivisions: first, mortgage credit and second, personal credit. The institutions belonging to the first subdivision are of two classes, the first of which is best typified by the Credit Foncier de France, and the second by the Landschaften of Germany. The institutions belonging to the second subdivision are of three classes, the first of which is best typified by any of the ordinary credit banks, the second by the Raiffeisen and Schulze-Delitzsch banks, and the third by the Credit Agricole of France.

There are, of course, in Europe numerous agricultural banks having characteristics somewhat different from those of the above mentioned institutions, but in the main the institutions included in the above outline constitute the real basis of agricultural credit organizations in Europe and all other agricultural banks are very largely patterned after them.

The Credit Foncier de France, in addition to certain activities that are not strictly connected with agriculture, loans money on farm mortgages for long periods of time on an amortization basis. The chief advantage to the farmer is in the fact that he is allowed to pay off his loan by making small semi-annual payments, will never have to renew the mortgage, which will continue to run until the semi-annual payments have cleared the farm of debt, will never be compelled to pay any renewal commissions, will never have to go to the expense of bringing down his proof of title or having it examined every few years, as under American system, and in addition will be largely relieved of any anxiety lest he fail to meet the mortgage when due and consequently lose the farm. The Credit Foncier holds these mortgages as collateral for its debenture bonds, of which it obtains the funds to advance to the farmers. The Credit Foncier, while under the supervision of the government, is nevertheless a privately owned joint stock company and pays regular dividends on its capital stock. The rate of interest which is charged to the farmer is not as low as has sometimes been stated in America, where attention has been called to the fact that the Credit Foncier issues bonds bearing 3 per cent interest.

The Credit Foncier 3 per cent rate is due to the fact that the bonds carry with them a lottery feature by which each bondholder has a chance to win a prize consisting of a large sum of money, but the cost of these prizes increases the actual cost of the bonds to the Credit Foncier from 3 per cent up to about 4 per cent and the money is then loaned to the farmer at 4 3-10 per cent. Therefore, the farmer does not get 3 per cent money as is oftentimes stated.

The Landschaften banks of Germany loan money to farmers on much the same basis as that employed by the Credit Foncier of France except that they do not make a practice of paying a farmer cash for his mortgage. They simply exchange their debenture bonds with the farmer for his mortgage and the farmer then sells the bonds himself. The Landschaften are under the supervision of the government and are strictly co-operative organizations involving in many instances the unlimited liability of the members, and not being operated for a profit or paying dividends.

Attention has been called in America to the fact that the Landschaften sometimes issue bonds bearing a rate of interest as low as 3 1-2 per cent, but in actual practice this Landschaften 3 1-2 per cent rate costs the farmer considerably more owing to the fact that the Landschaften do not pay the farmer in cash, but merely exchange their debentures for his mortgage and he is then compelled to sell the 3 1-2 per cent debenture bonds below par. The money consequently costs him more than 3 1-2 per cent.

The ordinary form of credit bank is operated on much the same general plan as the ordinary commercial bank in America. It loans to farmers for fairly short terms on the same general conditions as in our country. These banks are privately owned joint-stock institutions and would doubtless be able to do much toward financing the farmer for his needs were it not for the fact that the European banking methods have led to the present existence of but a comparatively small number of ordinary credit banks. These banks are usually large institutions extending over a considerable territory and are not small independent community banks as in the United States.

The rate of interest charged by them follows to a considerable extent the ups and downs of the money market.

The Raiffeisen and Schulze-Delitzsch banks are small community institutions organized on the co-operative plan and not operated for profits. The Raiffeisen banks operate more particularly in the country and are purely co-operative, while the Schulze-Delitzsch banks operate more particularly in urban communities and are a somewhat modified form of the purely co-operative type. These banks oftentimes have behind them the unlimited liability of all their members, and they accept deposits allowing interest thereon and loan the money to their members for fairly short periods of time. Each one of the co-operatively owned local banks usually belongs to a co-operatively owned central association which exercises a control over the entire organization, acting as a sort of clearing house and central bank.

The rates of interest charged by these banks depend largely upon the rates of interest paid on savings deposits in each particular locality, for they must, of course, meet competition in order to get the business. While as a general thing they are not able to obtain funds at a cheaper rate than other institutions, nevertheless they are able to loan these funds at a somewhat better rate than other institutions, owing to the fact that their expenses are very light, their officers usually serving without salary, and due to the further important fact that they are co-operative organizations and are not operated for profits.

The Credit Agricole of France consists of a large number of co-operatively owned local banks which are affiliated with regional banks to which the government advances certain sums of money without interest. The regional banks, which are co-operative in character, lend this free money to the local banks at a low rate and they in turn loan to the farmer. These banks are not operated for the purpose of earning dividends, are in many cases safeguarded by the unlimited liability of their members, and furnish the best European illustrations of state aided agricultural credit.

Attention has been called in America to the Credit Agricole 3½ per cent interest rate, and it is an actual fact that these banks really loan money to farmers at 3½ per cent, but this is due to a government subsidy and would be looked upon as abnormal, from the standpoint of Americans. The government has compelled the Bank of France to furnish it a large sum of money without interest, to be used for the advancement of agriculture, and as outlined in the above brief explanation of the Credit Agricole, the government loans this money to the branches or regional banks free of interest. These regional banks loan to local banks at 3 per cent and in some parts of France the local banks loan to the farmer at 3½ per cent. This system is deplored by many leading bankers in France as tending to develop a false idea of the value of credit and is liable to discontiuation some time in the future. Furthermore, some of the individual banks of the Credit Agricole system occasionally exhaust all of the money that has been allotted to them by the government and in order to continue the extension of credit they are compelled to rediscount farmers' notes with the Bank of France, and as they are loaning to the farmer at 3½ per cent and sometimes rediscounting with the Bank of France at a higher rate, it follows that the more business they do under such conditions the larger amount of money they lose, and this is an unreasonable and unsatisfactory foundation for any system of banking.

This, in condensed form, is the story of farm finance in Europe, and our people here in America cannot do a greater national service than to study carefully and push forward this great question of farm finance, which concerns so directly the financing of the "back to the soil" movement, which in its turn is fundamental and concerns vitally the future prosperity of our nation.—[Geo. Woodruff before Farm Credits Conference.

SUNFLOWERS FOR SHADE AND FEED.

To the Editor of The Homestead:

We plant some sunflowers every season, and find a variety of uses for them. Plant as many in a hill as you like, but two strong plants are sufficient in each hill, and even then the hills should be three or four feet apart. Where they are planted closer, they are apt to kill out, especially in dry weather.

Our sunflower patch is planted as above directed, cultivated practically the same as corn, and when the heads are well filled, the stalks dying, and the grain ripe enough to shatter out well, we go through the patch, clipping the heads off with a corn knife and piling them or tossing them into the wagon. They are then hauled to the house as a feed for the poultry.

The heads are spread out well in some sheltered place or strung on baling wire to cure out, as they are quick to mold and rot if placed in large piles where they heat. The stalks we also cut and haul to the house, after they have cured in the field. They are used for bean or pea trellis, for sticking in the ground and making chick feed coops, and the larger ones for firewood. They are especially fine for kindling fires.

Other uses are made of the sunflower. We sometimes plant them around the edge of the garden for an ornament, and when ripe, clip the heads off for feed. Planted a little in advance of bean-planting time, their stalks make fine, natural supports for the vines. Our patch usually is close enough to the poultry buildings for the poultry to use the ground for a run, and as the leaves are very broad, such a shade is most welcome and beneficial in the heat of summer; while the poultry droppings are well scattered over the ground.

It is best not to shell out the seeds if one has a place where the heads can be left whole. This is our plan, and when we are ready to feed them to the poultry, the heads are thrown out with the seeds in them, and the "biddies" have to work for their feed. We also feed the seeds to live stock, a handful or two for each animal. The seeds are very rich and nourishing, being especially fine for calves and colts, giving their hair a glossy color. They are of an oily consistency and act as a laxative; so should be fed with discretion, and only two or three times a week, or in very small quantities if given daily.

Cole Co., Mo. M. Coverdell.

An ear of corn should be cylindrical in shape, have straight rows of regular-shaped kernels. The ear will taper slightly toward the tip; one that tapers toward the butt is very objectionable. It should be full all the way from butt to tip, the dropping of rows being considered a serious fault.

Don't say that you're too far away
To come to Geneva on the 1st of May.
Stop the planter, lay off a day
And buy a Holstein da-i-ray.

When writing to advertisers please mention The Homestead.

Jackson "Olympic"—$1500
Four cylinders, 35 horsepower; unit power plant; long stroke motor, 4⅛ x 4¾-inches; 115-inch wheelbase; 34 x 4-inch tires. Complete equipment, including Disco starter. Black and nickel trimmings. Electric starter and lights, optional $225 extra.

"Majestic", four cylinders, $1975 "Sultanic", six cylinders, $2650

Jackson comfort more than merely soft cushions

We believe in deep upholstery and soft cushions; and we put them in our cars.

But we know—by virtue of eleven years of experience—that these are not the beginning and the end of real automobile comfort.

And we have done the best this long experience has taught us to put real comfort into Jackson cars.

The secret lies in engineering ability and engineering design.

Spring suspension, distribution and balance of weight, length of wheelbase, wheel size, all influence the car's riding qualities.

Jackson springs are all full elliptic, they ride 33 to 100 per cent easier than other types.

Jackson seat cushions are 10 inches thick; they are tilted slightly toward the rear. The seat backs reach to your shoulders.

Jackson wheelbases are long; and the wheel sizes are correctly proportioned.

All that engineering ingenuity can do to make the car ride easily, has been done in the Jackson.

Your problem is to chose the most comfortable car.

Write for the Jackson catalog and dealer's name.

Then ride in the car and your problem is solved—for you will find the Jackson car the most comfortable car you ever sat in.

JACKSON AUTOMOBILE CO., 1420 E. Main St., JACKSON, MICH.

Rogers' Hereford Sale.

Another very successful Hereford sale has been added to a long list of successful ones for the season and another sale reflects credit on W. N. Rogers, McCook, Neb., who is the gentleman that was largely responsible for the success of the sale made under his management at South Omaha, on April 16th. It seems almost out of the question to impress all consignors to a combination sale with the importance of listing only such cattle as are in salable condition. The fact that the cattle listed by two or three contributors were quite thin and in some instances undersized, made a very material difference in the average. Demand for the attractive sorts was very strong. The Rogers' consignment averaged about $250 per head. Mr. McNerny, Coin, Iowa, had four young bulls in the sale that sold for $1,060 which clearly indicates the demand that is apparent for good "White Faces." Thompson Bros., West Point, Neb., consigned a bull that topped the sale at $530. This bull was listed so late that he was not cataloged, which probably detracted somewhat from the price he should have brought. He was a very choice bull. Col. Callahan conducted the sale, assisted by Col. F. J. Zaun. Those selling for $100 or more are listed as follows:

BULLS.

Nero, calved 1912; Henry Rastede, Emerson, Neb. $140
Kitchner, calved 1911; John Frasuer, Grand Island Neb. 285
Cyrus, calved 1911; C. A. Cook, Wahoo, Neb. 235

West & Sons' Horse Sale.

A striking example of the effect that unjust legislation may have on the live stock industry was clearly demonstrated at the recent sale of Percheron and Belgian stallions and mares advertised to be held by Frank S. West & Son, Wood River, Neb., April 17th. For the past couple of years Nebraska horsemen have been laboring under what is probably the most drastic and harmful legislation regarding the horse breeding industry of any state in the Union. This legislation has had the effect of defeating most effectively the very conditions it sought to remedy. So far-reaching in its effect had it become that it was almost out of the question to sell first-class stallions at such prices as they deserved. This law had been enjoined by Nebraska horsemen and declared unconstitutional by the supreme court of that state. Stockmen had taken new heart, as it were, and were laying plans for bettering and extending the pure-bred industry within the state. With seeming assurance that their troubles along this line were ended, many Nebraska horsemen turned out for the West & Sons' sale only to find that the day previous another bill, almost identical with the old one, had passed the Nebraska legislature. When the fact became generally known among the prospective buyers there was not a Nebraska man who wished to purchase. A few mares, however, were sold to a Kansas buyer and one stallion to a Missouri buyer, after which the sale was discontinued. Such examples as this one should cause our legislators not alone of Nebraska, but other states as well to consider very carefully such bills as are menacing the live stock or farming interests, being careful to assure themselves that such legislation is really needed, that it will really exert a beneficial influence on the live stock or farming industry and last, but by no means least, assure themselves that the farmer constituents really wish such bill or bills. The live stock industry of the United States as it stands today is legislated to death. Farmers and stockmen are called upon to assist in paying a lot of fat salaries to different inspectors and commissioners, etc., when all this work might easily be handled by the different state live stock sanitary commissions working in harmony with the National Bureau of Animal Industry.

The Escher Angus Sale.

The sale of Chas. Escher & Son at their noted Longbranch Farm on April 16th, proved a great drawing card and the attendance was very good, notwithstanding it came in a very busy time of the year. The average of $284 on sixty-one head is the highest of the year, and the buyers present certainly got the worth of their money. The cattle were in nice condition and were well received by those present. At the earnest solicitation of many of the most prominent breeders present they consented to offer their great young first-prize bull, Bromo, and after some very spirited bidding he was knocked down to R. W. Franks, Renwick, Iowa, at $1,130. Mr. Franks certainly got a great bull in this fellow. He is by long odds the greatest young bull that has been offered in a public sale in many a day. He is an Erica-topped Blackbird, sired by Imp. Earl Eric of Ballendalloch. The top of the females was Imp. Erora, one of the best daughters of Interdict and one of the best breeding cows in the herd and she went to Walter Hurdle, Holly Springs, Miss., at $530. There were a great many good cows in this sale and when your remember that thirty-five head of these had calves at foot you can easily figure it out that the buyers secured good bargains. Another feature of this sale was the number of new buyers that were after cattle. It is one of the most hopeful signs to the breeders of all kinds of cattle and it bespeaks good things for the future of the business for many years to come. A feature of the Escher sale that was out of the ordinary was the presence of Mr. John Boles, Chicago, the well-known commission man who sold Advance, as well as the Escher steers at Pittsburgh and Chicago and he made an opening speech that was replete with optimism regarding the future of the cattle business in the country. It was a speech that was worth listening to because it was full of meat and it uncovered an orator or no mean ability and what he had to say had a very decided bearing on the sale. Col. Igo opened the sale and was at his best and was ably assisted by Col. Kraschel, both in the ring and on the block, and Johnny Boles and Marion Armenstrout were also in the ring. We list herewith the entire offering:

BULLS.

Bromo, calved September, 1911; R. W. Francks, Renwick, Iowa. $1,130
Elict, calved July, 1911; Walter Hurdle, Holly Springs, Miss. 205

CROP ROTATION RESULTS.

The North Dakota Experiment Station reports that a crop planted continuously to wheat for twenty years averaged a little over thirteen bushels, while the average yield of wheat on all the plots in the rotation experiments was nineteen bushels. Wheat after corn yielded seven and three-fourths bushels more the first year than wheat after wheat—the second year seven and a half bushels more and the third year two and a half bushels more. These results were for corn in hills. Wheat following drilled corn (rows six inches apart) gave a less yield than wheat after wheat the first year. The second and third years the increase was about the same as after corn in hills. Manure applied to corn in a four-year rotation with wheat gave an increase in yield. The value of this increase amounted to $1.40 per load of manure. When applied to millet in a similar rotation the increased value of crops amounted to $1.65 per load. The rotation of crops proved disastrous to weeds. Wild oats, for instance, in continuous wheat growing made up one-half of the crop. When a crop of millet, timothy or fallow was introduced every fourth year the wild oats were a negligible quantity.

A flood loss of $250,000,000 was suffered and 200,000 persons were made homeless in the Mississippi Valley in 1912.

"I Want A Small Light Tractor — One I Can Operate Alone"

That's what a prospective customer in Iowa wrote us the other day. Continuing, he said: "I just noticed from your ad in one of the farm papers that you are putting a small tractor on the market, and am anxious to get your catalog describing same. I have several catalogs of small tractors, but most of the concerns who are making them are new at the business and many of them are building only experiments."

This shrewd farmer is evidently familiar with Hart-Parr Quality and Service. Chances are he'll invest in a Hart-Parr "27"—the small, light tractor designed for 160 to 320 acres. It meets medium power needs.

With the Hart-Parr "Self-Lift" Plow (see illustration), it's a strictly One-Man Outfit. Plow is operated by a rope on the clutch lever. You run the entire outfit from the engine platform. Tractor is nearly all steel, strong but light. "Self-Lift" weighs one-third less than any other. Outfit will not sink and mire in soft soil.

Plow has independent self-lift and hand-lift attachments. Strongly constructed, with large clearance, light draft, no gears to clog or break. Special spring beam coupler enables bottoms to readily pass over or skid around obstructions and immediately return to line of draft.

Tractor takes the place of 12 sturdy horses, uses cheapest fuels at all loads and is oil cooled. You can use it for all kinds of work requiring power, from breaking sod to grinding feed.

Write for Special circulars describing both outfits.

THERE IT IS

NEW LAWS FOR IOWA FARMERS.

(Continued from page 8.)

of bees for delivery to any Iowa points unless they carry with them a certificate from the state or government inspectors. Violations of either provision of the new law impose a fine of not less than $25, nor more than $100.

COMMERCIAL fertilizers must pass inspection by the state dairy and food commissioner hereafter and each brand offered for sale inside the state must pay a state license fee of $20. Every commercial fertilizer offered for sale and selling for more than $3 a ton must bear upon each package a tag plainly setting forth the weight, the name and residence of the manufacturer, the ingredients of which it is made (including the filler, if any,) and the chemical analysis plainly stating the proportion of nitrogen, potassium and phosphorus. Any fertilizer offered for sale without being thus labeled and without the advance state license being paid is subject to a fine.

THE use of tobacco in any and all forms by any pupil of any public school is absolutely prohibited, under penalty of suspension or expulsion.

THE sum of $500 a year for the next two years is appropriated for further experiments in the cross breeding and selection of fruits and edible nuts, under the direction of the state horticultural society, at the experiment station at Charles City directed by Charles G. Patten.

THE board of supervisors of any county which has a county agricultural society and a county fair may, at any regular election, authorize a vote upon the question of a special tax not to exceed $1,000 a year for not to exceed ten years, to be spent for new buildings or other permanent improvements on the county fair grounds, or to pay debts contracted for new buildings or such permanent improvements.

ANY ditch, drain or water course which is constructed so as to prevent the surface or overflow water from adjacent lands from entering the same is held to be a public nuisance and can be abated as such by the ordinary process of law. Any person obstructing or impeding, without due legal authority, any ditch, drain or water course or breaking down any levee or canal, is held to be guilty of a misdemeanor and may be fined.

THE minimum speed at which stock trains must be moved is placed at twelve miles an hour, while no train may consist of more than fifty cars. The burden of proof as to speed is placed upon the railroad, the new law reading thus: "The burden of proof that cars of live stock are so moved shall be upon the carrier and proof that such cars were moved according to schedule or time table shall not be prima facie evidence that they were moved at the highest practicable speed consistent with reasonable safety."

COUNTY boards of supervisors are authorized to purchase or condemn not to exceed five acres of land, within the county limits, at any one place, for the purpose of obtaining gravel or other material suitable for road building and improvements, the tract thus bought or condemned to be paid for out of the county funds.

PROVISION is made for the registration of names for public highways at least twenty-five miles in length, the name to be registered with the state highway commission, together with the emblem or design with which the road is to be marked. After this has been done no other road or association may use the name and emblem thus registered.

BOUNTIES were established as follows: $20 for the skin of an adult wolf killed inside the state; $4 for a wolf cub; $1 for a lynx or wildcat, ten cents for each crow. These amounts are to be paid by the county treasurer, on presentation of the skins, which must be immediately mutilated or destroyed so that no person can collect the bounty on them again.

A POTATO UPLIFT MOVEMENT.

To the Editor of The Homestead:

The potato industry of the United States while a very considerable one, is by no means so important as the extent and population of the country would seem to justify. The present average production of potatoes per acre in the United States is less than half that of either Great Britain or Germany. When the total average annual crop is compared with that of Germany it is found that we produce but a trifle over one bushel for every five produced by the German farmer. It is eminently fitting that the American farmer should inquire why the German empire with an area of 208,670 square miles and a population of approximately 65,000,000 people should produce nearly five times as many bushels of potatoes as the United States with an area exclusive of Alaska of 2,970,230 square miles and a population of about 90,000,000 of people.

How do the German people dispose of such quantities of potatoes? This is a question to which the American farmer has, as yet, given too little consideration, but it is one which from now on should seriously engage his attention. Briefly summed up it might be stated that the German potato crop is, on the average, disposed of about as follows: 28 per cent is used for table purposes; 40 per cent is converted into stock foods; 12 per cent is used for seed purposes, and the remaining 4 per cent is converted into starch; 6 per cent alcohol and 10 per cent decay. Certain quantities are, of course, exported to other countries where prices are sufficiently high to make such disposal more profitable than for industrial purposes.

What becomes of the American crop? The disposition of the American crop is a comparatively simple proposition; about 87 per cent is used for table purposes; 12 per cent for seed and 1 per cent is devoted to starch manufacture or is fed to stock. Generally speaking that which is not used for table purposes or for seed represents the culls, and diseased stock.

Under existing conditions our present potato supply is a fluctuating one, and in consequence the prices received by the producer and paid by the consumer varies very widely. In a normal growing season throughout the United States the production is ample for table purposes and prices are moderate. In an unfavorable season the crop is not sufficient to meet the market demands and the price is high. In Germany, on the other hand, a short crop simply means that the table stock is supplied from the 40 per cent which is ordinarily converted into stock food, hence there is no wide variation in prices as in this country where no such reserve supply is available.

Can potatoes be profitably grown in this country for industrial purposes? How can we avoid seasons of abundance and seasons of scarcity with their consequent price fluctations? These are questions which are national in their scope and of nation-wide economic importance. They can only be successfully handled through state and local associations acting in cooperation with a national organization. To meet such a situation The National Potato Association of America has recently been organized. The present officers of this association are as follows: President, W. A. Martin, Houlton, Maine; vice-president, E. H. Grubb, Carbondale, Colorado; secretary-treasurer, William Stuart, U. S. Department of Agriculture, Washington, D. C.

The objects of the association as set forth in the constitution are to bring together for mutual co-operation and co-ordination of effort all agencies interested in the production, transportation, distribution and utilization of potatoes, and the promotion of the potato industry in all its phases.

Wm. Stuart.

NORTHWESTERN GREENING APPLE.

To the Editor of The Homestead:

An Iowa subscriber sends the following communication:

I am about to plant an orchard and a friend has recommended the Northwestern Greening. It is claimed to be a hardy, durable tree with large, good fruit which will keep all winter. If this is all true it must be the variety I am looking for. I am located in the latitude of Cedar Rapids. Would I be safe in setting two-thirds of my orchard of this variety?

The claims made for the variety are in part true at least. The fruit is large and of good quality. As a keeper it does very well—better in northern Iowa than in your latitude. As a bearer we think it should be rated as light. It looks very scattering upon the tree, but the fruit is so large that it often measures up as many bushels as trees of smaller apples which are more thickly set.

As this Greening originated in south Wisconsin, it ought to be a hardy, durable tree. And that has been the expectation in regard to it. It happens that we have lately had occasion to examine an orchard which gives evidence against its durability. These trees were planted upon good corn land—rich prairie soil—some ten years ago. They have made a vigorous growth and have borne sparingly for four years back. It happened that one of them was broken off in a wind storm last summer, and it was found to be rotten at the heart; in fact, two-thirds of the stem of the tree was dozy. An examination showed that every one of the Greenings was similarly affected. They are all rotten in trunk and crotches, while the tops still look vigorous and healthy. So it may be said that in this particular orchard the N. W. Greening is not durable.

We would be the last to claim that this special case settles the question. "One swallow never makes a summer," and it needs more than one example to settle any principle. It may be that there are many Greening orchards sound and vigorous to old age. It may be that there was some unfortunate condition in the propagation of the trees mentioned. Possibly they were injured during the first winter in nursery.

At least we shall be glad to believe that there are some peculiar and special reasons why these trees are failing at such an early age.

It would be nothing less than a calamity if the great number of the Greening trees planted in the Northwest are doomed to short lives.

But personally, having seen what we have seen, we shoud hesitate to plant largely of this variety without first making a careful investigation of this point. Inquire of those who have been long growing this variety how the trees are holding up. And let those orchard men who have had experience upon this point write about it.

There is one peculiarity about the fruit of the Greening which we have not noticed in the fruit of any other variety: Some of the apples will rot upon the trees in the early fall, before the crop ripens. Others will be found decaying about the time the crop is gathered. Some others will be rotten before midwinter, and the balance, say one-third to one-half of the total, will keep perfectly until March and April. This fact makes necessary plenty of room for storing the Greening and frequent sorting, but the quantity which finally carries through to spring season and prices is of excellent quality either for home use or market.

M. E. H.

LOSS OF PLUMAGE.

The following communication has been received from an Iowa subscriber, Mrs. G. S. Adams:

The feathers are all coming off my chickens' necks for two inches down the front under the wattles. They are well and healthy and have good, red combs. Have a flock of over 200 hens and seven male birds and the whole flock is affected the same way. Will you please tell me the cause of this and a remedy?

If the bare places are covered with small white or light gray spots varying in size from a pinhead to a dime that are raised at the border and depressed in the center, the trouble is favus.

And if, as we rather suspect, no crusts or outward signs are visible the trouble is scabies, caused by a parasite known as the "depluming scab mite." It is often difficult to distinguish between favus and the depluming mite, but if the irritation shows up with a depression in the center of which the feather is fixed it is favus.

The depluming mite infests the air sacs and is of such a tenacious character as to be very difficult to get rid of. The symptoms are found in a fine white powder on the surface of the air sacs. When existing in small number they do little harm. When dressing a fowl this powder is frequently noticeable with no apparent harm to the fowl. However, in large numbers they produce a diseased condition of the skin causing fowls to become weak and anemic and susceptible to disease. So hard is this trouble to combat that some authorities advise that the only sure way of extermination is to kill off the entire flock and procure entirely new stock. It is well to take much poultry advice with a good big "grain of salt." If every flock was disposed of that is advised there would be few places left from which to procure new stock.

In either favus or scabies individual treatment is necessary. In early stages of the trouble any mild disinfectant will answer. In this case, which appears serious, it is advisable not to experiment. Rub the affected parts daily with one-half ounce vaseline to which has been added three grains nitrate of silver. If there are scales they must be scraped off with a piece of wood sharpened to an edge so that the treatment can penetrate to the base of the trouble. It is possible for people to contract favus—have a care about the hands coming in contact with the affected parts.

BRUSH FOR BEAN CLIMBERS.

To the Editor of The Homestead:

When planting pole beans or any other variety of climbing beans or peas we have found it a good plan to lay brush between every other row, leaving out one row on each side for convenience to pass through when picking the beans.

The beans may be cultivated or hoed several times before placing the brush between the rows, but as soon as they begin to vine place the brush in the rows, laying the vines on same. This brush allows a free circulation of air to pass through under the vines, keeping them in fine condition and preventing mold or decay if the season should happen to be a wet one. If the season is dry the vines on the brush will shade the ground, preventing the soil from drying out underneath and thus retaining much of the moisture which would be lost if planted in the usual way where the beans climb on poles.

This method will keep the beans green much longer than the pole method and the supply of beans will be much longer also.

It is not a difficult matter to place this brush. It will not cause as much work as placing poles and the expense will not be so great.

A. Glitzke.

Geese will pick up the greater part of their living, and when grass comes they require no extra feed whatever. Try a few this season.

EVERY FARMER

Should possess a copy of Dickinson's Hand-book on Farm Seeds. Vest-pocket size. Over 50 pages of reliable information about the growing of the crops in which you are most vitally interested. Illustrated in color. Sent free upon receipt of 4c in stamps to cover cost of mailing. We guarantee you will find this book the most valuable publication of its kind you have ever seen. *WRITE US TODAY.*

Ray L. Gribben, northwestern Iowa, South Dakota and southwestern Minnesota. Address West Hotel, Sioux City, Iowa.

A. T. Cole, Missouri, Kansas and Oklahoma. Address 3900 Holmes St., Kansas City, Mo.

H. E. Browning (swine division), Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address Hersman, Ill.

John C. Halderman, Kansas. Address 4347 Harrison St., Kansas City, Mo.

A. W. Hopkins, Wisconsin. Address 201-202 Washington Blk., Madison, Wis.

J. C. Price, southern and western Nebraska. Address 145 So. 28th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

H. Redenius, Rushmore, Minn., offers Percheron stallions on page 39.

Davenport & Mack, Belmond, Iowa, have pure Scotch bulls for sale. See advertisement on page 38.

Strongly bred Galloway bulls and females are offered by J. P. Milliken, Media, Ill., whose advertisement appears on page 37.

J. C. Charleson, Leland, Iowa, can quote good prices on that most useful Short-horn, the milking strain. Write him. His advertisement is on page 38.

G. O. Satre's Chester White sows are real bargains for buyers. Look up his advertisement on page 38 and write him. Address G. O. Satre, Jewell, Iowa.

Geo. W. De Barr, Aurora, Iowa, is offering a few O. I. C. gilts, bred for summer farrow, for sale at right prices in his advertisement on page 35 of this issue.

Jas. Pedley, Britt, Iowa, can furnish some extra choice Clydesdale stallions to buyers whom the best breeding and and individuality are none too good. Write him. His advertisement is on page 39.

E. J. Augspurger, Pulaski, Iowa, is offering for sale fall Poland China pigs of excellent quality and breeding. He will also sell a three-year-old Scotch-bred roan herd bull and some bull calves. See page 35.

I. J. Wilson, West Branch, Iowa, has over 100 fine Duroc Jersey pigs sired by Golden Model 2d, Wilson's Defender and Wilson's Crimson Wonder. These 100 pigs are from fifteen sows which is an excellent record.

Fifty head of Short-horn cattle will be offered at public sale at Preemption, Ill., June 13th, by Whitsett Bros. This will be one of the best lots of cattle ever sent forward from the old-established herd, and full particulars will be given our readers in due time.

John M. Bay, the progressive Short-horn breeder at Aledo, Ill., will make a public sale Wednesday, June 4th. This will be Mr. Bay's first public sale and he is preparing to offer a class of cattle that will please the public. Particulars will appear in these colmuns later.

Wm. Reed, Rose Hill, Iowa, is offering some extra good fall boars sired by his two great herd boars, Chief Select and Reed's Top Col. He can please anyone in need of a good pig that will develop into a good herd boar. See his advertisement on page 37 and write him mentioning The Homestead.

O. S. Gibbons & Son, Atlantic, Iowa, writes: "We are consigning two head of extra good young Hereford bulls to the Breeders' Combination Sale to be held at Kansas City on May 6th. These bulls are just past two years of age, with plenty of scale, big bone, good quarters, good heads and fine, dark color. They are grandsons of Western Anxiety and out of good producing dams. They are good propositions for anybody and will bear inspection on sale day."

Will Michael, Selma, Iowa, has an advertisement on page 35 of this issue of The Homestead, in which he is offering some blocky, good-boned Chester White pigs for sale.

C. M. Kerr, Clermont, Iowa, is offering two extra heavy registered Shire stallion colts for sale in his advertisement appearing on page 35 of this issue. He writes: "These colts are from a prize-winning Truman stallion, nice bays and will develop into close to ton horses. They are both sound and will be sold at bargain prices."

From the interesting Alberta advertisement on page 25 it would seem that there yet remain opportunities for enterprising farmers to obtain free homesteads of 160 acres in Canada. The advantages of this land are merely referred to in the advertisement. Other facts in reference to them may be learned by writing to Frank H. Hewitt, Des Moines, Iowa.

C. A. Saunders, Manilla, Iowa, is offering some very classy Scotch bulls for sale, several of which will make splendid herd bulls. The breeding and individuality of these are such as will make herd bulls that any breeder can afford to own. Make it a point to go and see Mr. Saunders. He will take pleasure in showing you these bulls.

Real Angus herd headers are the attractions John Lakings, Hurley, South Dakota, offers in his advertisement on page 37 of this issue. They are the most profitable type, are growthy and will suit most breeders or cattle raisers who want something of a high order. Better write now for prices. Address, mentioning The Homestead, John Lakings, Hurley, S. D.

The Old Fairbanks-Morse concern, which has been a pioneer in so many of the machines to which modern farm advancement has been made, have made a new departure and are now offering the Fairbanks-Morse harvester engine. This little engine, as will be noticed in the engraving on page 9, is designed to attach to a harvester furnishing power for cutting and binding. Read the advertisement carefully and write for catalog No. E. E. 603. Address Fairbanks-Morse Co., 900 South Wabash Ave., Chicago, Ill.

Some good Short-horn bulls are advertised for sale by W. H. McLaughlin, Shelby, Iowa, on page 37.

There are many questions involved in silo building that are of particular interest to those who contemplate such work during the coming season. It is always the aim to build a better silo and a stronger silo, one that is rigid and immovable and that differs from the common stave silo. The experience of a prominent silo factory has brought out in this question an all-steel door frame, an inner anchor, base anchor, a splinedowel, and an angle steel rib. All these points are to secure the excellence above mentioned. The advertisement of the Saginaw silo on page 22 shows why these improvements tend to make a perfect silo. The silo book No. 34 goes into complete detail in description and arguments. It may be had without cost. A postal card request will get it. Address the McClure Co., Saginaw, Mich.

Angus Entries Wanted.

A few more high Aberdeen Angus cattle are wanted by M. A. Judy for the combination sale he is to hold at Chicago, June 18th. Some of the leading breeders are contributing to this sale. The demand for breeding cattle of the beef breeds is very strong and profitable prices are being realized. This will be an excellent opportunity to dispose of surplus stock. Entry blanks and full particulars can be secured by addressing M. A. Judy, West Lebanon, Ind.

La Doux's Short-horns and Chester Whites.

Among the good herds of Chester Whites in Iowa must be numbered that of Fred W. La Doux, Spirit Lake, Iowa. For a man whose efforts in this line extend over only a very few years, Mr. La Doux has done well indeed, and if he continues at the rate he has so far, which we think he certainly will, judging from the careful attention he has given to the selection of new breeding stock, his herd will take rank close up among the leaders. This spring the sows have done quite well, and a little later in the year, readers of this section of The Homestead will read of some good spring and fall boars that will be offered for sale. The fall boar pigs he has include several that breeders needing herd headers can investigate to advantage. Just now Mr. La Doux, who has a small herd of Short-horns, has a June bull calf by a son of the old Sultan bull once heading N. A. Lind's herd, and out of a Scotch Butterfly cow, a straight Scotch calf, growthy, good lines, type, and almost a red, that he would sell. Write him about the calf.

Halbrook Angus Sale.

On May 27th, P. J. Donohoe, Halbrook, Iowa, and Wm. Cash, Williamsburg, Iowa, will sell sixty Aberdeen Angus cattle at public auction in the Halbrook sale pavilion. The cattle to be sold are a clean, high-class lot of faultless breeding and the men selling them are right in every way. Blackbirds, Ericas, Queen Mothers and Prides are the four families that will make up the offering. Write P. J. Donohoe, Halbrook, Iowa, to place you on the mailing list for a catalog and in so doing mention The Homestead.

Classy Hereford Bulls.

Farmers and breeders who are in the market for Hereford bulls will be interested in the advertisement of the Riverside Stock Farm, of Geo. D. Harrah, Newton, Iowa. Mr. Harrah has a very large herd which carries the very best as well as the most popular strains of breeding. He has on hand bulls of various ages, some of which are true show-yard prospects. Great pains is taken to supply the demands of rangemen in carload lots. Personal inspection is guaranteed. Address all inquiries to Geo. D. Harrah, Newton, Iowa. See page 38.

Brook's Hampshire Swine.

C. A. Brook, Washington, Iowa, has a large herd of Hampshire swine headed by the great International prize-winning boar, Joe 7743, and in the herd are a number of prize-winning sows. Corrector 10490 the junior champion boar at Chicago, 1912, was recently sold at a long price to Geo. T. Pearce, Bloomfield, Iowa, to head his good herd of Hampshires. Mr. Brook has over 200 March and April pigs sired by Joe, Corrector and Signet 8185 and they are the best lot of pigs that he has had on the farm in a long time. A high percentage of them are perfectly belted. Mr. Brook is a practical hog raisers and has been very successful in selling all his surplus stock at good prices because he has the kind that please buyers. If any of our readers want to buy some pigs at weaning time they should write Mr. Brook for prices, mentioning The Homestead. See advertisement on page 37.

Owens Bros.' Short-horn Sale.

Owens Bros., Homestead, Iowa, will sell at their farm on June 12th about seventy-five Short-horn cattle at public auction. Fifteen bulls are listed and among them are some of the herd-header sort. Every animal in the sale will be of the best Scotch breeding, and from an old reliable herd that has been in the hands of master breeders for many years. This is an excellent place at which to buy breeding cattle that will do good. Full particulars will be given in later issues of the Homestead. Write them to place you on the mailing list for catalog, mentioning this paper.

Vala's Rosegay Bull to Ames.

It is always a pleasure to visit the herds maintained by the Farm Department of the Iowa State College at Ames. In order to place the best ideals of the various breeds before the students, every part of the herds must be kept up to a high standard of excellence. From such stock as this, the animals that this institution offers for sale from time to time, must certainly be desirable property. Just now, a yearling Angus bull, dropped a year ago in February, is being offered for sale. He is a thick youngster, low set and blocky and by the great Vala's Rosegay, a bull with a show yard and breeding record of high degree. This is an attractive proposition for some one. Address Farm Department, Iowa State College, Ames, Iowa.

Eggert's New Importation of Horses.

Geo. Eggert, Newton, Iowa, had a fresh importation of Percheron, Belgian and Shire stallions and mares arrive at his barns yesterday and he will be glad to show them to any prospective buyer. Last year Mr. Eggert imported horses good enough to win championships at the Iowa State Fair. In this importation there are better horses than he showed last year. Mr. Eggert made good winnings on Belgians and Shires last year, but not so much on Percherons. The reason of this was the fact that he has sold all his best Percherons before the fair. We want to say that he has as good Percherons in this importation as can be found. There are stallions and mares of the three breeds that if fitted can win this year. Anyone in need of a stallion or pair of mares can buy cheaper now than they can after Mr. Eggert has had to feed them for a few months. The fact that Oaklawn barns were empty before this arrival of horses shows that Mr. Eggert imports the right kind of horses and sells them at right prices. See the advertisement on page 36, and mention The Homestead when writing.

Griffith's Aberdeen Angus.

John E. Griffith, Washington, Iowa, has one of the leading herds of Aberdeen Angus cattle in the state. The herd numbers around 200 head at the present time. He has a few bulls left from ten to twelve months of age that he would sell worth the money. A few females are also offered. Mr. Griffith grows his cattle in a practical manner. They are given the same attention as one gives cattle by the good farmer throughout the corn belt. The leading families are represented in the herd. Write for prices on what you want, mentioning The Homestead. See advertisement on page 37.

Taylor & Welty Hereford Dispersion.

Taylor & Welty, Wanatah, Ind., writes: "Our entire herd of high-class Herefords will be dispersed April 29th. We have been breeding Herefords since 1900, but have decided to close out our herd owing to a change in our farming operations, and will offer about eighty head, small and large. Nearly all the cows of breeding age have calves at foot and are bred again. This is the best lot of cattle we have ever been able to produce. It is one of the grandest producing herds in the country. All the cattle are producers, and from the very bst strains of blood. Come and own some of the grand big cows in this offering. Everything will be sold. The farm joins the city limits. The sale will begin promptly at twelve o'clock, and will be held in comfortable quarters."

Good Fall Boars for Sale.

Some Poland China breeder that is wanting a good fall boar should write Harry Dodds, Florence, Neb., as he has three or four good ones for sale. One of these is a September 9th boar and is sired by I Am Big Too, the boar that sired Futurity Jack, the sensational young boar that Charlie Lonergan showed at the Nebraska State Fair last fall. The dam of this pig is Victoress, a daughter of Big Victor. This is a promising pig and will make a splendid herd boar when grown out. He has two others by the same boar and out of Rose by Guy's Prospect and these are quite good boars. He is pricing these boars at from $35 to $50 and they are well worth the money. If you want one of these you will have to get busy with your order right away. Kindly mention The Homestead when writing him.

Fields' Farm Herefords.

R. M. Fields & Son Lees Summit, Mo., are offering in the May 6th sale to be held in the fine stock pavilion at Kansas City, Mo., two double standard polled bulls and two cows. The double standard polled bulls are by King Francis (one of the strongest double standard polled bulls there is on record) and out of Anxiety cows. These bulls are in fine shape, well built, good color, heavy hone and well marked, twenty-two and twenty-three months old. They will make herd headers. The two cows are great granddaughters to the great bull Beau Brummel. They are young cows four years old and have already produced two fine calves each. At present these cows are bred to Prince 5th, a double standard polled bull out of a prize-winner cow shown at the World's Fair, St. Louis, Mo. The cows will calve soon. See advertisement on page 36.

Stanley Buys Good Short-horns.

A. O. Stanley, Sheridan, Mo., who owns a small, but very select herd of Short-horn cattle, has recently purchased a number of very choice young Scotch cows which will make his one of the choice herds of north Missouri. Two daughters of Orange Model, one a Cicely three year old, in calf to Clipper Model and a Rosewood with heifer calf at foot by Cicely King were purchased from the good herd of W. A. Betteridge, Pilot Grove, Mo. They are a choice pair and as well bred along Scotch and Cruickshank lines as could be desired. At the Stanton sale at Chicago Mr. Stanley secured a Village Maid out of an imported dam bred by Mr. Duthie, a Marr-bred Clara, and a Bruce Mayflower. The Mayflower heifer is well along in calf to a Missie bull and the former two go back to Mr. Stanton's farm to be bred to Browndale Sultan, a great son of Avondale. Mr. Stanley is a good judge of cattle, is a discriminating buyer of good ones and these will certainly prove valuable additions to his herd and do the breed much good in his section of Missouri.

What is Hog-Joy?

Hog-Joy is a little machine herewith illustrated. Its object is the destruction of lice on hogs. Its construction is perfectly plain and anyone who has taken notice of the intelligence of the hog will see that it won't take long until every hog in the place is taking

advantage of it. Crude oil is used in the receptacle, but any other fluid may be used equally as well. It has a strong cast-iron frame with a trough and an iron cylinder. The oil is fed into the trough automatically as used. Whenever a hog rubs against the cylinder he turns it and brings up a new supply. The advertisement of this

The Homestead a Good Medium for Advertising.

F. B. Greenwalt & Son, Mt. Auburn, Iowa, breed Short-horn cattle, and as a result of a small advertisement placed in the columns of The Homestead, they write saying: "We certainly find The Homestead a good medium for advertising good bulls. We received over thirty inquiries in answer to our advertisement in a short time and it sold both the animals we had for sale." For advertising rates or other information of interest to those who have pure-bred stock for sale address HOMESTEAD COMPANY, DES MOINES, IOWA.

machine will be found on page 16. For illustrated circular giving additional information write to the Hog-Joy Co., 301 N. 5th St., Springfield, Ill.

Quality in Cement Fence Posts.

In an advertisement on page 27 of this paper our readers are made acquainted with the merits of cement staple posts, which the manufacturers offer as the only cement fence posts made in which staples can be driven. These posts are made on improved plans with the most strict adherence to the principles of concrete construction which produce indestructable posts with conveniences which have been obtained only through the use of wood. These posts are proof against frost, fire and water. Complete information concerning them, together with testimonials and special prices will be obtained by writing to Columbus Cement Post Sales Co., Westerville, Ohio.

Kansas City Hereford Sale.

The twelve head of cows and heifers consigned by me to the May 6th Hereford sale at Kansas City, are extra good ones in every way, just the kind to use in establishing a good herd. They are a very smooth lot with plenty of size, all well marked, and all good colors. Ten are sired by Dale's Eclipse 223697, a grandson of Dale, one by Beau Anxiety 160170, a son of Beau Brummel, and one by Advancer 35th, 292173, a grandson of March On. These heifers are from twenty to thirty months old, and seven of them are in calf to Dale's Eclipse, Beau Anxiety and Beau Donald K. Two are due to calve in June, two in July, one in August and two in November. Four of the open heifers are eighteen months old, and one twelve months. They are a fine lot and will be sold in good breeding condition. Just right to go out on grass and do good. For catalog address R. T. Thornton, 1309 E. 15th St., Kansas City, Mo.

Drybread's Bull Consignment.

Samuel Drybread, proprietor of the Star Breeding Farm, Elk City, Kan., writes: "I am consigning fifteen choice bulls to the combination sale to be held at Kansas City, May 6th. These are a very choice lot and run in age from twelve to twenty-six months old. They are of the heavy bone, easy-feeding sort and are well marked and richly colored. These fifteen bulls have been selected out of 150 head and are strongly bred Anxiety, being close descendants of the famous bull, Beau Brummel. These are the best lot of bulls ever consigned or sent out from this good herd, and those in the market for the right kind of bulls for use the coming season for herd headers, farm or ranch use will find suitable material in this consignment. Since consigning this lot of bulls to this sale I have turned down tempting offers for them, as I wish to demonstrate to the public the kind of stock I am handling and I have selected the best bulls from my herd for this sale. No better opportunity has been presented this year to the buying public to select the right kind of bulls. Mr. Bull Buyer, you will find it to your interest to be at the fine stock pavilion at nine o'clock, May 6th, and don't fail to look this consignment over. For catalog address R. T. Thornton, 1309 E. 15th St., Kansas City, Mo. See page 36.

Fred Sievers' Big Polands.

One of the breeders who is rapidly coming to the front with his big-type Poland Chinas is Fred Sievers, Audubon, Iowa, and he has at the head of his herd some of the best boars today in the West. First and foremost is Big Wonder, a boar that now weighs in his everyday clothes 935 pounds, and all of the boys will have to take off their hats to this hog. He is a better boar today than he was at the last state fair, he has the size, the bone and length, is active as a pig and he breeds all kinds of size and bone. He is a hog in a thousand, and we care not where you go, and when you go and see him you do not have to question his size nor his weight. He is one of the most promising large-type boars today of the breed. Another boar that is coming is Orphan Wonder, the great son of The Big Wonder, and this boar was the highest priced boar at any and all of the sales last fall. He cost $325 at the Neuhofel sale and he has never regretted what he paid for him. He is out of an A. Wonder dam, possibly the best sow in the Newhofel herd. Another boar that would look good in any herd is Jumbo Price, a grandson of Chief Price 2d and out of a Jumbo Prospect dam, and he has pigs by all three of these hogs. Mr. Sievers has 120 spring pigs and he will have a splendid line up for his fall sale which is going to be one of the very attractive sales of the year.

Cypress in Barn Construction.

The rapidly decreasing supply of lumber with which farmers and builders are acquainted, and the greater demand for a material offering greater durability has led to an appreciation of cypress for general building purposes. We have at hand two books which, while exploiting the advantages of cypress, give also a mass of facts with which every farmer should be acquainted. One of these is a special cypress barn book. It contains plans for a large cow stable with milk room, two silos, feed and manure carriers, ventilators, and all the economical arrangements consistent with the modern idea of dairying. It contains plans for a middle-sized barn with silo inside, as well as quite a number of other barn and silo plans. Lists of materials, working plans and specifications are given. These are valuable and could not be obtained from an architect for less than $25 or $30. The other book, entitled "General Farm Needs," contains plans for several sorts of barns, poultry house, corn crib, hog house, silo and small conservatory. These are also complete and ready to work from. These books have been obtained by an association of cypress manufacturers who, in order to popularize their goods, would be glad to send a copy of each of the books named to anyone who will fill out the coupon to be found in the advertisement and forward it to Southern Cypress Manufacturers' Association, Hibernia Bank Building, New Orleans, La.

Drybread's Hereford Bulls.

In an announcement of the combination sale of Hereford cattle to be held at Kansas City, May 6th, it will be noted that Samual Drybread, Elk City, Kan., is putting forward fifteen head of the most carefully selected bulls in his big herd of 150. These are choice ones of desirable ages and with quality that is in keeping with the most aristocratic lines of breeding. They are big heavy-boned fellows, richly colored ones, and are feeders that must appeal to beef producers everywhere. This consignment added to the extraordinarily good lot put forward by other breeders will make the sale an interesting one for farmers, ranch men and breeders. Special information may be obtained from a copy of the catalog, for which address R. T. Thornton, Mgr., 1313 E. 15th St., Kansas City, Mo.

Sixty-Five Bulls—Forty-Five Females in Kansas City May Sale.

R. T. Thornton, 1309 E. 15th St., Kansas City, Mo., manager of the sale of Hereford cattle to be held at Kansas City, Mo., on May 6th, writes that Gudgel & Simpson, Independence, Mo., have decided to list five more of their good Anxiety-bred heifers and that Mousel Bros., Cambridge, Neb., have listed twelve choice bulls making the total number to be sold 110 head, sixty-five bulls and forty-five females. The Gudgel & Simpson heifers are all bred heifers and represent the best lines of breeding they have in their herd that has furnished the breed with so much good stuff. The bulls Mousel Bros. are sending to the sale are two-year-old bulls ready for service. Those looking for polled bulls should not overlook this opportunity as there are five head listed that carry as many polled crosses as it is possible to find and they are said to be first-class bulls in every respect. There are several cows listed that are bred to double standard polled bulls that head the herds from which the contributions to the sale are made. Mr. Thornton will gladly mail catalogs on receipt of request for same. See advertisement on page 36.

Importance of Asphalt.

Asphalt in its many combinations has grown to be of wonderful importance in the construction of farm buildings. As a roofing material it has assumed remarkable prominence of late years, Genasco roofing, advertised on page 2, is made from pure Trinidad Lake asphalt, which insures its giving absolute protection as a water-proof roofing. It is very low in price, easily applied and has any number of valuable qualities. It may be secured from dealers or other information concerning it may be obtained by writing to Barber Asphalt Paving Co., Philadelphia, Pa.

A Convenient Automobile Light.

Prest-O-Lite advertised on page 21, is presented as an extraordinary good light for automobiles, which is inexpensive and which supplies a light as good or better than others under all conditions incident to the operation of an automobile. The Prest-O-Lite may be used on automobiles which have been fitted with lamps for the use of carbide and without any extra expense. The light may also be used for any purposes around the farm which require artificial light. The illustration of the threshing machine in the advertisement shows one of its important uses. The Prest-O-Lite may be obtained on a free thirty days' trial from any dealer or direct from the manufacturers. For complete details address the Prest-O-Lite Co., 420 E. South St., Indianapolis, Ind.

Shire Horse Sovereignty.

We have before us a little booklet from the pen of John G. Truman, the well-known Shire horse specialist, which is really an important contribution to the horse literature of this country. Mr. Truman is probably as well fitted for the work of preparing such a book as any man living. He takes up in the first place the Shire as a breed, points out the natural prepotency which reproduces the massiveness, docility and superb muscling which are the striking characteristics of the Shire. Divisions of the book treat also on the subjects of contemporary supply and demand, farm demand now dominates prices, later Shire importations, Shire geldings hold market records, present day market geldings, the soundest breed on earth, the Shire in America, and good reason for Shire prepotency. The book makes interesting reading for farmers who realize the need for securing draft merits in their farm horses. Copies of it may be obtained free by writing to J. G. Truman, president, American Shire Association, Bushnell, Ill.

The Angus Spring Bull Sales.

Sec. Charles Gray, American Aberdeen Angus Breeders' Association writes: "Every breeder of Aberdeen Angus cattle should be interested in the continued success and achievements of the Aberdeen Angus cattle. Every breeder in general and prospective bull buyer in particular should be especially interested in American Aberdeen Angus Breeders' Association spring bull sales which are to be held April 29th, at the Union Stock Yards, South Omaha, Neb., and at the Union Stock Yards, Chicago, May 1st. One hundred and seventy-five head of top notch bulls ready for service have already been cataloged for the sales. There are bulls that will top the market and bulls that are matured and ready to do heavy service on the ranges of the West. Never before has the American Aberdeen Angus Breeders' Association spent so much time and money to advance the interest of its breed. These spring bull sales have long been needed in order to asemble a large number of bulls at one point so that rangemen, breeders and farmers will be afforded an opportunity to secure their needs in form of single individuals or in car-load lots. The secretary of the association will manage these sales with the single object of making them a success for the consignor, as well as the buyer without having to consider pecuniary profit which is usually always paramount, thus, prospective bull buyers can attend either or both these sales with absolute confidence that the association will look after his interests. Only healthy bulls will be offered. All bulls will be tested so they can be shipped to any state in the Union or to Canada. The 175 bulls listed for these two sales will bring together more Aberdeen Angus bulls than have ever been cataloged and offered for sale in one week during the history of the breed in America. By personal correspondence the association has made a systematic inventory of all the bulls old enough or fit to use for breeding purposes. The bulls cataloged for the Omaha and Chicago sales practically comprise all the bulls of serviceable ages in the country at present, thus, every breeder, farmer and rangeman in need of a bull, or bulls should avail himself of this last and only opportunity to secure his needs for this season. A volume could be written on the merits of the offerings and the advantages of the plan presents to prospective bull buyers, however, space is too limited."

Westrope's Short-horn Bulls.

On page 37 J. G. Westrope, Harlan, Iowa, is offering some splendid young Scotch and Scotch-topped bulls for sale and he has some that are good enough to head herds. He is desirous of closing these out and is therefore pricing them where they will sell. Write him about these at once or go and see the bulls he is offering.

Bryson's Short-horn Sale.

One of the most desirable lots of Short-horn cattle from a beef standpoint that has been submitted in a long time will be offered at Lake Fork, Logan county, Illinois, Tuesday of next week, April 29th, by W. H. Bryson, who sells sixty head, fifteen of them bulls. This lot of cattle will reflect credit on both Mr. Bryson and the breed. They have been raised under outdoor conditions that tend to future usefulness, and will go into the sale in satisfactory condition. They carry the blood of many noted bulls, and as an object lesson on making beef production with Short-horn cattle this sale will be a most practical demonstration. Mr. Bryson maintains a large herd on his farm at Lake Fork, and the coming sale is made for the purpose of reducing his surplus. It is in no sense a speculative lot of cattle, but the natural increase of one of the strongest and most regular producing herds in the state. There are fifteen bulls cataloged, fourteen of them yearlings, all of the low-down soggy, approved beef type, and they should meet ready appreciation at the hands of the farmers of the corn belt. There is need for every one of these bulls on the farms of Iowa and Illinois. The herd bull, Golden Edgewood, is also listed, as Mr. Bryson has so many of his get that he is forced to let him go. He is by Imp. Bapton Diamond and out of a dam by the champion Ceremonious Archer, and is one of the deepest ribbed and strongest topped bulls sold at public sale in a long time, while his breeding is good enough to entitle him to head any herd. His sons and daughters in the sale give ample proof as to his strong breeding qualities. Many of the cows sell with calves at foot, and the females are all of the big roomy sort, the kind that make reliable breeding matrons. If you appreciate Short-horns of the approved beef type you will be interested in this sale, while they come from the herd of a gentleman that is thoroughly reliable in every way. Look up the advertisement on page 37, and send for the catalog, mentioning this paper when you write.

NEXT WEEK'S SALE PROGRAM

Tuesday April 29	Aberdeen Angus, American Aberdeen Angus Breeders' Association, South Omaha, Neb. Herefords, Taylor & Welty, Wanatah, Indiana. Short-horns, W. H. Bryson, Lake Fork, Illinois.
Thursday May 1	Holsteins, T. H. Russell, Geneva, Ohio. Aberdeen Angus, American Aberdeen Angus Breeders' Association, Chicago, Ill.
Friday May 2	Holsteins, T. H. Russell, Geneva, Ohio.

Take some money to Russell's Sale,
Buy some Holsteins without fail
The kind that fill an eight-gallon pail,
Now don't think this a fairy tale.

Nauman's Duroc Jerseys.

D. Nauman, West Liberty, Iowa, whose advertisement offering fall Duroc Jersey boars for sale appears on page 35 of this issue, writes: "I have eight head of fall boars, weighing about 200 pounds. They are a fine cherry red color, good bone and good on feet. They are sired by Defender Junior, he by Defender. I will close them out at farmers' prices. Here is a chance to get a cheap pig. I also have five head of fall gilts bred for August farrow to Chief Jewell, he by Chief Select. I guarantee as represented or money back."

Howell Reese's Forthcoming Sale.

On June 11th, at South Omaha, Howell Reese & Son, Pilger, Neb., will make their annual sale of Short-horns at which time they will offer forty-five head of the best cattle that have ever come from their well-known herd. Included will be a number of good show heifers, most of which are sired by Ruberta's Goods, the bull that has done such good service in their herd since the death of old Choice Goods. It will be remembered that in their last sale the get of Ruberta's Goods were eagerly picked up by the best breeders at good prices, and both sons and daughters of his in other sales the past two years have been bringing sensational prices because of their uniformity and great fleshing qualities. They are selling a splendid lot of Scotch cows and heifers in this sale and there will be ten calves at foot, most of which are sired by Ruberta's Goods. There is one calf by their new bull White Hall Rosedale and another by Victor Sultan. All the females that are carrying calf will be bred to Ruberta's Goods or White Hall Rosedale. The latter bull is a son of that sensational sire, Avondale and he is out of Rosewood Pride, his grandam being Imp. Rosewood 86th by Pride of Day. He stood second at Lincoln to the great Diamond Goods, and he stood third at Kansas City to the great Ringmaster and White Star. At the International in 1911 he stood second to Gainford Marquis, so you may know he is some bull individually as well as being a well-bred fellow. He is a wonderfully thick and well-fleshed bull and is destined to make a splendid record in the Reese herd. He will weigh 2,400 pounds, is a rich red roan in color and will unquestionably assist materially in making the Reese herd one of the most noted Short-horn herds in the West. Both of these bulls will be at the sale and breeders will have an opportunity of passing on them. They are selling six splendid young bulls in this sale among which is Good Secret, a son of Ruberta's Goods and out of a daughter of Imp. McNaughton that bids fair to make a most excellent herd bull. He is a Cruickshank Secret, and one that is good enough to head any herd. There will also be a good Lavender, an Orange Blossom, a Crocus and a good calf by The Callant, the latter bull being another splendid son of Avondale, together with two or three others that breeders will like. If you want to be sure to get a catalog kindly drop a postal card to Howell Reese & Son, Pilger, Neb., at once, asking for the same and kindly mention The Homestead and it will be forwarded just as soon as it is out of print.

A Remarkable Holstein Sire.

Elsewhere we publish an illustration of the Holstein bull Count Cornucopia Korndyke, a bull of very superior merit, both individually and in breeding. Regarding the sire such is conveyed in the fact that he is the $5,000 son of Pontiac Korndyke and the $8,000 cow, Pontiac Rag Apple. Thus Count Korndyke derives 87½ per cent of his blood from Hengerveld De Kol and Pontiac Korndyke, two as great sires as ever lived, a combination of whose blood has produced extraordinary results. Pontiac Rag Apple made an extra large record and she is a full sister to Pontiac Clothilde De Kol 2d, the first thirty-seven-pound cow, the first to make 145 pounds of butter in thirty days or 1,000 pounds of butter fat in a year. She is also the only cow that has ever made three thirty-pound records and her combination of records made each year stand unapproached by any other cow. Pontiac Korndyke has eleven thirty-pound cows and twenty-one of his daughters have records that average over thirty pounds. Not only are his own daughters making a great showing, but also his granddaughters, among them being many cows and heifers with remarkable records. His dam, the great foundation cow Delle Korndyke, made her record at a time when there were but few twenty-five-pound cows and as a progenitor of great dairy animals she has no superior for she has transmitted great dairy qualities through both sons and daughters as has no other cow. She has one daughter with two sons having two thirty-pound daughters each and another daughter has a son with two thirty-one-pound daughters. The dam of Count Cornucopia Korndyke, a twenty-five-pound four and a half year old, is by Aaggie Cornucopia Pauline Count from a twenty-five-pound daughter of the good transmitting sire, Pauline Paul's De Kol, who

HOLSTEINS

May 1st and 2d is the date,
Geneva is the station;
Russell's herd is the one on sale,
The best in all creation.

Tell me not in idle jingle,

THE EVENT OF THE SEASON

Auctioneers, Canfield, Kelley, Jones, Perry. Mgrs. of Sale, The Holstein Breeder Co.

IDLE HOUR PLACE STOCK FARM, T. H. Russell, Geneva, Ohio

Write for Catalog, Mentioning The Homestead.

was from the foundation cow, Pauline Paul, and sired by a son of Paul De Kol, unquestionably one of the greatest of the earlier A. R. O. sires, Aaggie Cornucopia Pauline Count is by Pauline Paul 2d's Count from Aaggie Cornucopia Pauline, the first thirty-four-pound cow and her record made as a senior four year old stood for eight years undefeated in its class. Count Cornucopia Korndyke, as will be seen, possesses a very strong pedigree and his only daughters to be tested thus far made the excellent showing, as a junior two year old, of sixteen pounds of butter in a week averaging sixty-one pounds of milk in a month with an average of over fifty pounds of milk. This shows a very persistent production and to some extent typifies the high qualities of his progeny. His ancestry in every line is noted not only for large production, but for a remarkable ability to transmit those dairy qualities and he is certain to have an extra good list of large record daughters. This remarkable Holstein sire is owned by T. H. Russell, Idle Hour Place Stock Farm, Geneva, Ohio, and fifty-five of his daughters are cataloged for the two-days sale to be held May 1st and 2d. Look up the advertisement on this page and write for a copy of the catalog to T. H. Russell, Geneva, Ohio, mentioning this paper when you write.

Truman Reports Big Trade.

Manager J. G. Truman, Pioneer Stud Farm, Bushnell, Ill., writes: "We are pleased to state that the trade for strictly high-class Shire, Percheron and Belgian stallions still continues and we are in a good position to accommodate all who come here that want that class of horses as our last importation has filled our barns. Among our sales during March not previously reported are the following: J. P. Wylie, La Salle county, Illinois, imported Percheron stallion; W. B. Duncan, Marshall county, Illinois, Shire stallion; W. T. Head, Hendricks county, Indiana, imported Percheron stallion; James H. Collins & Son, Fountain county, Indiana, imported Shire stallion; Preston Draft Horse Company, Fillmore county, Minnesota, imported Percheron stallion; George Stoll and Koenig, Logan county, Illinois, imported Shire stallion (this is the fourth stallion we have sold them); Atwell & Lane, Henry county, Illinois, imported Shire stallion; John Overland, Fillmore county, Minnesota, Shire stallion; Johnston & Mauser, Buena Vista, county, Iowa, imported Shire stallion; Bert Mick, Clark County, Iowa, Percheron stallion; A. G. Thurman, Page county, Iowa, Shire stallion; J. M. Overton, Decatur county, Iowa, Percheron stallion; George N. Ferguson, Pottawattamie county, Iowa, champion Shire stallion Iowa State Fair, 1911; Amos Livezey & Son, Grant County, Indiana, imported Belgian stallion; J. L. Jones & Company, Louisa county, Iowa, imported Shire stallion; John A. Peterson, Grant county, Indiana, imported Belgian stallion; James Nelson, Decatur county, Iowa, imported Shire stallion; Millen & McNamara, Grant county, Wisconsin, imported Percheron stallion; Charles A. Vorwald, Delaware county, Iowa, imported Shire stallion; Chris Steffenmyer, Lee county, Iowa, imported Percheron stallion; Cal Walker, Mahaska county, Iowa, imported Belgian stallion; J. W. Griffin, Cass county, Indiana, imported Shire stallion; Earlville Percheron Horse Company, La Salle county, Illinois, imported Percheron stallion; C. A. Blanchard, Louisa county, Iowa, imported Shire stallion; Charles H. Cash, Edgar county, Illinois, Percheron stallion; R. E. Evoritt, Mercer county, Missouri, imported Shire stallion, (fourth stallion we have sold him); Leslie Bros., Ontario, Canada, Percheron stallion, (second stallion we have sold them); E. C. Sargeant, Knox county, Illinois, Belgian stallion; Irwin Bros. & Watt, Warren county, Illinois, imported Shire stallion; Johnston Bros., Ontario, Canada, imported Shire stallion and mare (second stallion); Lewis & Grant, Peoria county, Illinois, imported Percheron stallion; G. E. Tinker, Poweshiek county, Iowa, imported Shire stallion (fourth stallion); David Strand, Henderson county, Illinois, imported Percheron stallion, (second stallion); I. D. Timberlake, Hancock county, Illinois, imported Shire stallion, (third stallion); Jentson Bros., Fillmore county, Minnesota, Percheron stallion; C. G. Corey, Winona county, Minnesota, three imported Percheron mares. We shall be pleased to mail our 1913 catalog to any parties interested in strictly high-class draft horses." See page 39.

Lonergan's Poland Chinas.

The other day we called upon D. C. Lonergan, Florence, Neb., and found him caring for seventy-five good pigs with a few more sows to farrow. They always say a good start is half the battle and he certainly has the start with the pigs he now has on the place. At this writing it is one of the best bunches of pigs we have our eye on, and if everything goes right he will have a great line-up for his fall sale in October. He has about ten or twelve good fall boars on the place now that he is offering for sale and these are sired by his celebrated boars Big Victor, Big Bob, Guy's Price Last and L's Quality. He is pricing these at from $25 to $50 as long as they last and you can get a good one if you write him right away. He wants to close them out and therefore these reasonable prices. His present crop of spring pigs are sired by Big Victor, a hog that we regard as one of the greatest sires today in the West. Few hogs have sired as many good things as has Big Victor, and his get in turn have been producing some sensational winners. The remainder are sired by Metal's Top, L's Quality and Guy's Price Last. Just now Mr. Lonergan wants to sell the fall boars as he does not wish to carry them over. It is a good time to buy your boar as these will sell for high prices this coming fall, and if you want to get in on the ground floor send him your order at once. Mention The Homestead when writing him.

THE LITTLE COLT'S WELFARE.

To the Editor of The Homestead.

Noticing an inquiry from a brother farmer about a mare that does not have milk for her foal, I will relate my experience in the hope that it will be of some benefit. I had a mare that did not have milk for her first colt for about three days and the next year I gave her bran slop for about a week before she foaled and she had plenty of milk. I gave her a common bucket half full with a little salt mixed in. Dry feed causes constipation and the feeding of bran slop just before the foaling time will overcome this difficulty.

Unclean stalls cause navel infection and my remedy is to give the foal a tablespoonful of medicated castor oil just as quickly as I find it and also to put diluted carbolic acid on the navel every day for a week. Care should be taken not to get this solution too strong, about 95 per cent water is strong enough. Before foaling time I spray with Kreso dip all around the stall and disinfect the floor with slacked lime. John Drake.

KILLING LICE ON HORSES.

To the Editor of The Homestead:

I have a remedy for killing lice on horses that I think is superior to tobacco stems. This formula only costs ten cents to kill every louse on the farm and after using it for forty years I have never known it to fail. Dissolve one-fourth pound borax in one quart of hot water and add four ounces of aqua ammonia. Wet a cloth in the mixture and rub the horse on each side of the neck and one the back where the lice are thickest. Wet the hair slightly where lice are plentiful and repeat the dose in a week if necessary, which is seldom. It kills all the lice it touches and the rest quit business and drop off.

I also use it on young chicks, wetting their heads and bodies slightly without the least injury to the chicken. J. F. Speck.

Many men are never too busy to haggle with the assessor over the valuation placed upon property for taxation. There is a whole lot of cheap stuff in the country during the assessment period.

Ask your neighbor to subscribe for The Homestead.

Prices right. Address Geo. W. DeBar, Aurora, Iowa

OAKLAWN STOCK FARM IMPORTS and BREEDS

PERCHERONS. BELGIANS, SHIRES

A New Importation of Percheron, Belgian and Shire Stallions and mares arrived at our barns yesterday, April 23d, ready for the inspection of buyers. Compare our horses and prices with others. See these horses at once if you want a good stallion or mare.

LAST year we imported horses good enough to win grand championships at the Iowa State Fair. This importation is a better lot of horses and among them are several good enough to win this year. We will be pleased to show our horses to any one interested.

GEORGE EGGERT Mention Homestead When Writing. **NEWTON, IOWA.**

The Live Stock Market

Union Stock Yards, Chicago, Ill., April 19th.—Declines in fat cattle values during the week now closing have only made good predictions in these columns a week ago. They have come as the logical sequence to two consecutive weeks of liberal marketing and considering supply figures and the high cost of beef on the hooks the market has not been one that needs the services of an apologist. Chicago has received 50,000 cattle this week and had an equal number last week, while the past week's supply at six western markets aggregates 123,000, or 9,000 more than last week and 12,000 more than a year ago. These supply figures are not in themselves so bearish, but considering the high prices current and the fact that it has been a run of beef, the fact that the market has been subject to no more jolt than it has received is worthy of consideration as an indication of a fairly broad consumptive demand. Eighty per cent of the cattle run has been fat and beef men have secured good weights on the hooks. A buyer in speaking of quality of the week's crop said: "I cannot recall a time when cattle came better in quality or better adapted to trade needs. On Wednesday we thought we were buying a big fill and made allowances for it, but most buyers were surprised on persuing their dressing sheets to acertain the weights their purchasers had made on the hooks. The cattle proved actually cheaper than they looked on paper. It is fat that counts in making weights and fat has predominated this week."

Prices for beef steers range from ten to twenty-five cents lower than a week ago, barring strictly prime which are holding steady as exemplified by the sale of a two-load drove of very ripe Hereford Nebraska-fed beeves of the 6666 brand, averaging 1,493 pounds, on Wednesday to the Boston trade at $9.25 and a few other ripe beeves up to $9.10 to $9.20. Weights of 1,200 to 1,350 pounds have comprised a very large slice of the crop and most of them have been involved in a big fifteen-cent decline. Cattle of these weights selling from $8.25 to $8.75 have been in unusually profuse supply and have borne the brunt of the decline. "Cheap" steers, selling around and below $8.00 have not lost much ground, getting the benefit of feeder competition from the recently flooded area.

The heavy supply of the last two weeks from corn-belt feed lots has eliminated much of the visible supply and now little or no fear of gluts exists. The heavy run at the stall this week was due largely to muddy feed lots, a bad storm in the West and a desire on the part of holders to ship cattle while unable, owing to unfavorable weather conditions, to prosecute work in the fields. The character of the supply has not indicated the presence of many overripe bullocks back in feeders' hands and the trade will not be surprised if recepts fall off considerably during seeding and corn planting time. A broad view of the future warrants optimism, but the trade will need only moderate supplies the coming week as killers have been able to accumulate some beef in their coolers Eastern demand is not as broad as early in the month and a set of Jewish holidays are scheduled for April 28th and 29th, and with Kosher demand cut down a stout prop is taken from under the price list.

GOOD BUTCHER CATTLE BUMPED.

While current supply of cows and heifers is small, the lightest, probably, in proportion to the total cattle marketings even known at this season of the year, prices have been scaled down this week twenty-five to forty cents on the strictly good to prime beef cows, about twenty-five cents on good fat heifers and ten to fifteen cents on medium she stuff, canners holding fairly steady. For some time past good butcher cattle have been selling very high and costing killers more money on the hooks than steers and the sharper declines on the higher priced she stock than on steers this week is merely the beginning of a readjustment process. That a further downward revision of values on good cows and heifers is scheduled seems more than probable and with any kind of a fair run, either of native or Southwestern grass stuff it is hard to see how a declining market for female cattle can be avoided. Declines, however, are expected to be gradual, as with country buyers clamorous for the decently bred lighter-fleshed cattle of both sexes, killers will doubtless have some pretty strong competition to meet thoroughout the spring and early summer. Country buyers are now taking a fleshy class of well-bred young cows out at a cost of $5.85 to $6.10 and paying $6.25 to $6.75 for most of their purchases of stock and feeding heifers. Some dairy-bred, low- grade and plain cows are selling to killers around $5.15 to $5.25 and canner and cutter cows from $4.00 to $5.00, but most of the right good to very good butcher cows are making $6.25 to $.700 and a choice to prime heavy beef class $7.25 to $8.00. Prime yearling fed heifers are fetching $8.25 to $8.65, most of the very good to choice heifers $7.40 to $8.00 and fair to good killers $6.75 to $7.35 only a low grade thin sort going below $6.00. Bologna bulls are making the season's best prices, $6.40 to $6.80, practically covering their range, while choice to prime handy-weight beef bulls sell up to $7.25 to $7.75. Heavy fat bulls are relatively the lowest sale going largely from $6.90 to $7.25 and selling ten to fifteen cents lower than a week ago. Dairymen, both in the big dairy districts of the middle West and East are keeping market hoppers full of veal calves and prices are bumping the lowest levels of the season, showing seventy-five cents to $1.00 declines from the close last week. Most of the vealers are now selling here at $8.00 to $8.25, only a selected sort to the outside trade up to $8.50 and fair lights at $7.50 to $7.75. Heavy calves are holding up well by reason of scarcity and country demand for such as are bred along decent beef lines. Immediate future prospects favor buyers, but a lightly supplied and high level calf trade after the spring crop from the dairy districts has been well cashed in.

THREE STEERS SELL HIGH.

Good support of the market for stock and feeding cattle by Virginia, Maryland and Ohio buyers the past week, together with continued fair call from other sections, has toned up the market in good shape and now that grass is well started in most all sections, a big- broad demand from all parts of the compass is practically assured as there is a deficiency in supply the country over. The market is distinctly on a quality, rather than a weight or flesh basis and good to choice cattle of all weights are selling practically in the same notch. Demand, as anticipated with the rise of grass, is turning with greater force to the qualitied thin, young steers. While fleshy feeders show only a steady basis with a week ago, full ten to fifteen-cent advances are shown by the thin and lighter fleshed kinds of all weights. Choice steer yearlings are selling up to $8.00, the best fleshy feeders at $8.00 to $8.10, most of the good 600 to900-pound steers from $7.60 to $7.85 and plain to fair kinds of like weights from $7.15 to $7.50. Only inferior off-colored stock steers are dropping below the seven-cent lien and nothing decent in stock heifer stuff is selling below $6.00, good feeding heifers being quotable to $6.75 and desirable stock heifers around $6.25 to $6.60. The trade looks ripe for a series of active markets at current high prices and it would require but little swelling of demand to put prices back to as high a basis as has been shown this season. Thin young stockers are now very near that mark and the best feeders are within fifteen to twenty-five cents of the season's highest levels.

HOG MARKET TOP HEAVY.

While oats seeding and corn planting activities will tend to hold hog marketings down to modest proportions during the near future, and perhaps make possible a higher basis of prices for the immediate future, there is general expectancy of a liberal movement of hogs during the latter half of May and all through June, and the next three weeks promises to provide the best "getting off place" for growers who have hogs in good marketable condition. There has been a marked expansion in receipts this week, most of it at Misouri river markets and while the bear raid made on the price list shut off supplies toward week-end only a partial recovery of the declines of the first half of the week have been recovered. Eastern shipping demand is gradually diminishing and light weights no lower enjoying the stiff premium that was theirs a fortnight since. Prime light touched $9.25 here Friday, best heavy and butchers $9.20 and the bulk of the day's crop sold between that figure and $9.00, such prices being ten to fifteen cents higher than Thursday, but that much lower than the close last week. Rising temperatures have lessened demand for fresh pork which has had effect in weakening butcher classes more seriously than for packing grades. Quality continues good.

SHEEP VALUES BUMPED.

Ovine trade has failed badly in an effort to keep up the pace it set last week. Current prices are fifty cents lower than a week ago on the bulk of the fat classes of both sheep and lambs and some wooled goods not of the best class show sixty to sixty-five-cent declines. Slumpy eastern dressed mutton markets and sharply lower live markets east, seriously curtailing eastern shipping demand, have been the chief factors of depression, while receipts in the West have been liberal, six western markets having had over 190,000 head again this week and nearly 25,000 more than a year ago. Colorado, which centrals the main supply at the juncture has been crowding the market. There is still a prospect of a short supply gap developing during May, before the southern lamb crop begins to move freely, but conservative marketsings will be necessary for the next two weeks if much recovery toward recent high prices is to be expected. As noted a week ago the trend of prices between shorn and wooled stock is toward a narrowing of the range. Packers are showing marked preference for shorn stock, about the only wooled goods now selling to advantage being the high-dressing Colorado-Mexican lambs and even such are taking second place in buyers' favor to the best handy-weight, shorn stock. The following prices prevail at this week-end:

WOOLED STOCK.

Lambs, good to prime	$8.50@8.75
Lambs, fair to good	8.00@8.50
Lambs, common to fair	7.60@8.00
Lambs, culls	6.25@7.50
Lambs, feeders and shearers	6.00@7.85
Yearlings, fair to choice	7.00@7.75
Wether, good to choice	6.65@7.00
Wethers, plain to good	6.10@6.65
Ewes, fair to best	6.00@6.75
Ewes, culls	4.25@5.25
Bucks	5.00@6.00

SHORN STOCK.

Lambs, good to choice	7.50@7.75

Ed Walton, Bowen, Ill.

Sale to begin promptly at 10 o'clock a. m.

For Catalog or other information Address R. T. THORNTON, Mgr., 1309 E. 15th St., Kansas City, Mo.

"Man wants but little here below,
Nor wants that little long,"
But a Holstein cow from Russell's Sale,
Ought to your herd belong.

IOWA WEATHER AND CROP BULLETIN.

The following climate and crop bulletin is issued by the Iowa Weather and Crop service from the central station at Des Moines, for the week ending April 20, 1913:

Nearly a full week of bright sunshine, with practically no rain has started the growth of all vegetation, put the ground in fairly good condition, and enabled farmers to do a great amount of field work. The average temperature was about seven degrees above the normal, and the daily maximum temperatures ranged from 60 to 80 degrees. Except on low and untiled ground, where the soil is still too wet, rapid progress was made in seeding and plowing. The bulk of the oats is now in, and with favorable weather, all small grain will be sown before the close of the coming week. In many localities early potatoes have been planted, and a good start has been made in preparing ground for corn. Grass is starting nicely, and is earlier than usual although farm work is two weeks late. Winter grains are in fine condition. Peach and plum trees are in blossom in the extreme southeastern counties and all fruit trees show an abundance of healthy buds.

GEO. M. CHAPPEL,
Section Director.

PUBLIC SALE

OF A SELECT DRAFT OF

SHORT-HORN CATTLE

From the FOREST HOME HERD to be held on the farm, one-half mile from

LAKE FORK, LOGAN CO., ILL.,

TUESDAY, APRIL 29, 1913

Beginning at 1 O'clock, P. M.

SIXTY head of select cattle are cataloged and consist of 15 bulls and cows and heifers. The bulls are a high-class lot of youngsters with vigor and health and include several splendid herd-heading prospects. They have ample size and are of superior quality and, if given the opportunity, will develop into valuable breeding bulls. I am also offering my herd bull, Golden Edgewood 316426, a straight Scotch five-year-old roan son of Golden Prince 244737, by Imp. Bapton Sovereign 192125, and out of Cherry Lass by the noted Ceremonious Archer. The grandam of Golden Edgewood was Imp. Red Lady, bred by Mr. Murray, of Scotland. He is a bull with splendid conformation and breed type, is massive, yet smooth, has wonderful heart girth, splendid quarters, broad back, excellent head and horns, has an ideal disposition and is just in his prime. He has proven himself an impressive sire, as his thirty sons and daughters and some twenty calves at foot with dams in the sale will demonstrate The forty-five cows and heifers are a grand lot of individuals of superior type. Those old enough have been bred and are safe in calf or will have calves at foot on day of sale.

The cattle have wintered out of doors and are in the best of health and in splendid breeding condition. They are prolific, not a doubtful breeder being cataloged, and the cattle offered in this, my first sale of Short-horns, have been pronounced by good judges to be as good individually as will be sold at public auction this spring.

For catalog address, mentioning The Homestead.

W. H. BRYSON, LAKE FORK, LOGAN COUNTY, ILL.

Our 1912 importation now in our stables. A high-class lot of imported Percheron, Belgian and Shire stallions and mares. Come and see them.

DON'T WASTE TIME

EVERY spring your mares drop inferior colts you lose one more year of time in which to breed the stuff that pays. There's profit in Percherons because they are what's wanted. Don't delay. Investigate now I'll put my time against yours to prove you should.

Purchase Percherons

Address or call upon me freely. Wayne Dinsmore, Sec'y Percheron Society of America, Union Stock Yards, Chicago.

BELGIANS, PERCHERONS

HOME-BRED, registered Belgian stallions; home-bred, registered Percheron stallions and mares. Also standard bred, both sexes.

E. P. HAMILTON & SONS,

Garden Grove, Decatur county, Iowa, R. F. D. 2. 23 miles south west of Chariton.

Royally Bred Clydesdale Prize Winners

2 stallions, one a full brother to the state fair winner, Forest King; the other, a yearling, by him. They have size, big flat bone, good feet, are drafty types. One mare, the dam of the young horse, and a good one. I guarantee them to be right in every way. Address JAMES PEDLEY, Britt, Iowa.

PERCHERON STALLIONS

SOME bargains in Percheron stallions, ages ranging from yearlings to five year olds. Good propositions on both quality and prices. Address.

L. A. MATERN, WESLEY, IOWA.

Palestro I. 52027 (67506) will make the season of 1913 at my farm 2 mi. east of Garner, Ia. Palestro I. is a black sired by Mon Jarret (47526) by Theudis, by Besigue, by Brilliant III. and dam traces to Brilliant III. Write for terms. Henry Moll, Garner, Iowa.

AN EXTRA LOT OF YOUNG CLYDESDALE

STALLIONS that I will sell at right prices. Address R. O. MILLER, Route 1, Lucas, Ia.

PERCHERONS Imported and home-bred stallions and mares from $200 to $900 each. Address H. REDENIUS, RUSHMORE, MINNESOTA.

For Sale Cheap if taken soon, a Mo. bred jack, a good breeder, prompt and a sure foal getter. Address L. B. Cummings, Clearfield, Ia.

FOR SALE A pair of registered Morgan stallion colts coming 2 and 3 years old. For description and price write F. Bowman, Eldora, Ia.

FOR SALE Ten head of Percheron stallions, mares and colts. Address Ashbaugh Bros., Maynard, Iowa.

HORSES AND JACKS.

FRANK IAMS' REDUCED PRICES

IAMS has all his "Paris and Belgian" "Prize winners" and best "business Stallions and Mares" in his barns. All must be sold. $1,000 and $1,400 (some higher). Imported mares $800 and $1,000. Iams' kind "are best ever."

References—First National and Omaha National Banks, Omaha, Neb.; Packers National Bank, So. Omaha; Citizens State, First State and St. Paul State Banks, St. Paul, Neb.

On all His "Business" and "show Stallions and Mares" are the "Big Talk." He is "Closing Out" all his horses and making prices $200 to $500 less than formerly. Never were such choice, big "Prize winners" offered at such "Big Bargains." "All must be sold." They are "Model Drafters." Iams' "31 years of success" in Importing, Breeding and Selling 5,444 Registered Stallions and Mares. His "old customers" make his "best advertisers." His "Percheron and Belgian Stallions and Mares" are the very best he ever imported. They are of big size, large bone, model, smooth "drafters" of quality, fine form, finish and stylish, fast movers. Among them are

SEVERAL "PRIZE WINNERS" AT PARIS

Nogent-le-Rotrou and Chartress (three largest shows of France) and "several Belgian prize winners" at big Belgian "Horse Shows." They are all fully acclimated and in the "pink of condition." They were bought to sell. All must be sold at some price. I know France and Belgium and leading breeders there. I speak the languages and know how to "buy horses" at "Big Bargains," and I divide "the bargains" with my customers. Iams has

36 IMPORTED PERCHERON AND BELGIAN 36

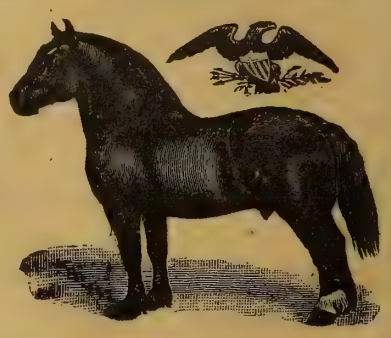
"stallion and mares," 2 to 6 years old, weight 1,700 to 2,500 lbs. All "Branded," "Approved," "Registered and "Inspected" by Governments of France and U. S. and Certificates "stamped" O. K. All inspected by a Nebraska Deputy State Veterinarian, and Certificates of "health and soundness" are given with each horse. Iams sells

IMPORTED STALLIONS AT $1,000 and $1,400

(few higher). Imported 2,000-lb. to 2,360-lb. mares at $800 to $1,000. Terms cash, or one year's time at 8 per cent bankable note, one and two years' time Land Security at 6 per cent; $100 less price for cash than time. Iams pays freight and buyer's fare, gives 60 per cent breeding guarantee; can place $1,500 insurance. Iams backs up his ads. with a $500 guarantee that you find the horses as represented. Write for Horse Catalog. It has a "$1,000 Bargain" on each page.

ST. PAUL, NEBRASKA.

Special Sale of Percheron and Belgian Stallions For Next Thirty Days



New importations arriving! Two large importations received since January 15th. Another importation of stallions and mares now on the water. More to arrive in April. We have at any time of the year more BIG-TON, HIGH-CLASS PERCHERON and BELGIAN stallions than any other firm in the United States.

HOLBERT HORSE IMPORTING CO
A. B. HOLBERT, Prop. GREELEY, IOWA

MAASDAM & WHEELER
FAIRFIELD, IOWA
PERCHERONS

10 Head of Extra Large Imported 3 Year Olds.
12 Head Large, Strong, Home-bred 3 Year Olds, Blacks and Dark Grays Still on Hand and for Sale This Spring at Reasonable Prices.
MARES AND YOUNG STOCK FOR SALE AT ALL TIMES

Belgian Emporium of America

150 Stallions, Mares and Colts 150

Including a Few Choice Young Percherons

60 HEAD imported October, 1912; another large importation arrived March, 1913, making this the best and largest collection of Belgian draft horses to be found anywhere in America. The supply on hand never allowed to run low; you will at all times find a large and choice collection from which to choose. You will be delighted at the Belgian Horse Show to which you will be treated when here. I can satisfy you in price; I can satisfy you in quality, bays, browns, blacks, sorrels and roans. Get on the train, come to Cedar Rapids or Iowa City, then phone me to meet you at the electric car line; car every hour from Cedar Rapids and from Iowa City. Catalog ready.

HENRY LEFEBURE, FAIRFAX IOWA.

HOMEWOOD STOCK FARM
PERCHERON STALLIONS AND MARES

It is our intention and has been for the past five years to make a complete clearance every spring so as to give our customers fresh, clean horses each year. We will therefore quote very low prices on all stallions and mares to move them quickly. Every animal with the exception of the home breds were imported by us last fall and are now in prime breeding condition. Stallions are rising three and four year olds. Are blacks and grays and are weighing from 1,850 to 2,150. They are sound, excellent individuals and fit to go into any community needing the services of a first-class draft stallion. We have a few matched pairs of imported mares. If you want a real bargain in a first-class animal of either sex come and see us at once or write for full particulars. Terms to suit anyone. Homewood is conveniently located twenty-three miles south of Chicago on I. C. and Big Four railroads. Trains to and from the city every hour. Barns near station, Belle phone Homewood 58 W.

S. METZ & SONS, Homewood Stock Farm, Homewood, Illinois

FAIRVIEW JACK AND JENNET FARM

60 HEAD MISSOURI AND KENTUCKY BRED. A strictly high-class lot of Mammoth Jacks and Jennets, 14½ to 16½ hands high, with plenty of bone and quality. Everything guaranteed as represented, and priced right. Address

J. C. HUCKSTEP, EOLIA, PIKE COUNTY, MISSOURI

The BEST IMPORTED STOCK

Choice big mares and splendid over-a-ton-type stallions. These are PERCHERONS and BELGIANS—each a perfect specimen and remarkably low priced. EVERY DAY A BARGAIN DAY AT MY SALES BARNS.

WHY FARMING WITH TRACTOR IS BEST

With Tractor Power Comes Efficiency in Soil Tillage, Economy in Crop Production and an Ever-Increasing Pleasure in Farm Work.—*By W. H. Ruther.*

TRACTION ENGINE FARMING ON A BIG SCALE.

THE modern farm tractor is the greatest invention in farm machinery since that of the self-binder. In the next few years it will work a greater revolution in the agricultural line than was ever created by the self-binding reaper. Farming will then become a greater business proposition than manufacturing or merchandising ever has been.

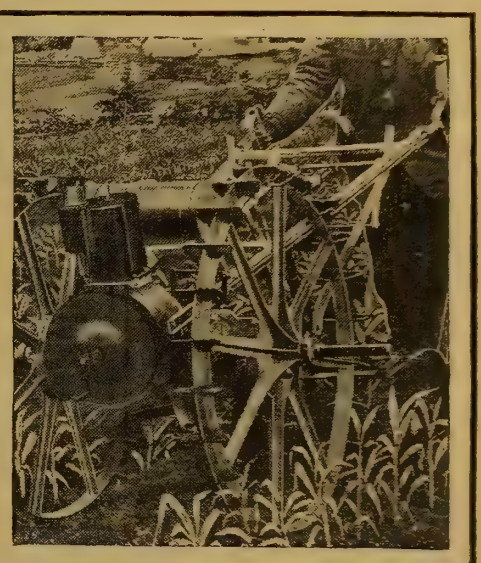
Present methods of transportation by steam and electric railways as well as by rivers, lakes and canals, make world-wide competition in farm products, and the farmer who makes the most success of farmnig is the one who raises the largest number of bushels of grain per acre at the smallest cost possible. The modern farm tractor is the answer to this problem because it places in the hands of one man a power formerly requiring many men and horses, enabling him to plow his land deeper, to disk, seed and harrow in the best possible manner and to harvest his crop far more quickly and certainly, as well as making it possible for him to thresh and market the crop more quickly. All of this means larger crops, better crops and lower cost of production, and, better yet, it means less bad work and drudgery which will go a long way toward keeping the boy on the farm.

In this modern, advancing day farming with horses is too expensive. They cannot do the work fast enough and require so many men to drive them; they are subject to too many accidents, diseases, weather conditions and require a large percentage of the crop to feed them, besides the time necessary to care for them.

The tractor means larger crops by doing the work right and the deep-tilled soil will retain the moisture when the dry season comes on. It will haul a number of loaded wagons at one time on a hot day without injury and will work as many hours as you desire, operating night and day if necessary in a rush season. It requires about the same attention as one team while at work and when idle needs no attention at all. Not only is it easier and pleasanter to handle than horses at less cost, but saves the expense of keeping surplus horses for use in rush seasons only. The tractor will do as much work the first day of the season as any time and can be housed in about one-twelfth of the room required for horses, hay oats and corn.

Statistics compiled by agricultural schools show that a horse is used only on an average of about three hours per day. Thus it will be seen that the horse must be fed twenty-one hours a day for nothing, while fuel is used in the tractor while actually at work. After all this and the thousands of testimonials being received in the factories every day, some people say it cannot succeed when it has already proven a success. These same people were saying a few years ago that the gasoline engine and the automobile would never be practical. In spite of this one company manufactures 300 engines a day and this year one motor car company will build about 80,000 cars and two other companies about 40,000 each.

One man says, "I would buy a tractor if my farm was large enough." Another says, "My farm is too hilly for the successful operation of a tractor." While it



GASOLINE POWER FOR THE CORN PLOW.

is a well-known fact that a horse is capable of exerting an over amount of power for a short time, under all reasonable conditions a tractor can be used where it is possible to farm with horses, and a small size tractor may be profitably used

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 30 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.25; ten years in advance, $4.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address all letters to

THE HOMESTEAD COMPANY,
Des Moines, Iowa.

THE HOG CHOLERA CAMPAIGN.

With the loss from hog cholera last year placed by the federal government at six and one-half million head, entailing a financial loss of $66,500,000, it is important to note what the four leading swine states of the nation are doing toward checking the ravages of the cholera. Iowa, Illinois, Nebraska and Missouri are accredited with twenty million head of hogs, more than one-third of the entire number in the nation. With the Iowa legislature which adjourned last week making an appropriation of $35,000 for the manufacture and distribution of serum, all four of these states are at last banded together in a systematic crusade to minimize the pestilence which is proving such a heavy burden upon the live stock men. The following report, by states, has been brought up to date, so far as possible:

Iowa.—The recent legislature appropriated $35,000 for the establishment of a serum laboratory at Ames, the director to be appointed by the president of the state college of agriculture, the serum to be manufactured and distributed under the supervision of the college authorities. The serum is to be sold to Iowa breeders at the actual cost of production (estimated to be about two cents per cubic centimeter), no serum to be sold outside the state unless supply exceeds the demands from within the state. The loss from hog cholera in Iowa in the past year has been variously estimated between $6,000,000 and $12,000,000.

Illinois.—The manufacture of serum is under the supervision of the state board of live stock commissioners, the serum being distributed free of charge to the owner of hogs. The state appropriated $22,500 for the work in 1912, from which could be manufactured about 320,000 doses. Dr. A. T. Peters is director of the laboratory at Springfield.

Nebraska.—An appropriation of $15,000 for the production of hog cholera serum to be made under the direction of the Animal Pathology Division of the Nebraska Experiment Station. Serum is sold at cost of production, which is about two cents per cubic centimeter or fifty cents per 100 pounds of live weight of hog. Farmers are requested to call the nearest qualified veterinarian. Provision is made under certain conditions for furnishing serum direct to farmers, but virulent cholera serum is furnished only to veterinarians. Dr. J. H. Gain, Nebraska, who has charge of this work, endorses the simultaneous method and expresses the belief that the "control of hog cholera by the use of serum must be largely through the simultaneous method, immunizing the well herds in the immediate neighborhood of outbreaks."

Missouri.—Under the direction of the veterinary department of the college, serum is sent direct to farmers or to veterinarians at a charge of twenty-five cents per dose of twenty cubic centimeters. Capacity at the present time from 20,000 to 30,000 doses per month. Dr. J. W. Connaway, Agricultural College, Columbia, Mo., in charge.

It will thus be seen that three of the four leading hog states have made direct appropriations of $72,500 for the purpose of checking the ravages of the plague, while the fourth state is actively engaged in manufacturing and distributing the serum. The other states of the grain belt are equally alert, Kansas, Wisconsin, Minnesota and South Dakota selling serum, under the direction of the veterinary department of the experiment station, at actual cost, ranging from one and one-half cents to two cents per cubic centimeter. In order to help along in the campaign as much as possible we give the addresses of the men in charge in these states: Dr. J. H. Gains, Nebraska; Dr. A. T. Peters, Springfield, Illinois; Dr. F. B. Hadley, Madison, Wisconsin; Dr. M. H. Reynolds, St. Anthony Park, Minnesota; Dr. J. W. Connaway, Columbia, Missouri; Dr. F. S. Schoenleber, Manhattan, Kansas.

UNLOCK THE SCHOOLHOUSE DOOR.

The rural school has had more attention paid to it by the legislatures of the various grain belt states the past winter than for many years. Notably has this been the case in Iowa and Kansas. In Iowa the initiative was taken by the Iowa State Teachers' Association, the second largest in the country notwithstanding the fact that Iowa ranks only fifteenth in population. A Better School Commission was appointed which, after investigating the educational problems both of the city and of the country quite thoroughly, made a number of recommendations, the majority of which were enacted into laws by the recent legislature. Included in these recommendations thus made into laws were a minimum wage scale making the teacher's salary dependent upon the grade secured in the examination for a certificate; making it possible for school directors to buy additional land and improve it for playground purposes; changing the manner of selecting the county superintendent and removing that office from politics; compelling the teaching of elementary agriculture, domestic science and manual training in all the public schools and granting state aid to consolidated schools having suitable grounds and necessary equipment for the teaching of agriculture and home economics.

While all this was being done in Iowa the Kansas legislature was enacting a number of new school laws which can hardly fail to make that state take still higher rank in the educational world. Chief among the new Kansas laws is the one opening up the schoolhouses as community centers for meetings and entertainments of all kinds. The new Kansas law which might well serve as a model for other states, reads as follows:

The district board shall have the care and keeping of the schoolhouse and other property belonging to the district. They are hereby authorized to open the schoolhouse for the use of religious, political, literary, scientific, mechanical, or agricultural societies, or societies for the suppression of crime belonging to their district, for the purpose of holding the business or public meetings of said societies, under such regulations as the school board may adopt; but it shall be unlawful for the school board to act arbitrarily or partially in the matter of prescribing regulations for the use of the schoolhouse; and any abuse of their powers by the school district board may be corrected by the district court through mandamus or injunction on the application of any of the aforementioned societies.

This movement to unlock the schoolhouse door is making great headway throughout the grain belt. Dr. Frank Crane, one of the eminent divines of the middle West, has this to say of the new movement, in a recent article:

There are four purposes to which every schoolhouse might be used for the benefit of the people of afternoons and evenings:

Music.

The theater.

Dancing and reading, including the library and reading room.

Before this can be done we shall have to grasp the idea that it is the duty of democracy to look after amusements as a means of culture and as a function of self government and to see that amusements have a deal to do with the morals of the people.

One thing we might do right now is to provide a cinematograph in the schoolhouse. Nothing ever devised so combines amusement and instruction as the moving picture show. Why cannot the people take it over?

The schoolhouse is the one institution wherein the people realize themselves as a unit, bound together, not by sect, clan, class or creed, but simply by the supreme fact that they are all human beings.

The schoolhouse is the nest egg of millennial democracy.

The Kansas law is akin to that already in force in Wisconsin, where any local organization of citizens that is neither partisan, sectarian or exclusive can, by right of citizenship and not by grace of any school board, make social and public use of any school building. The Wisconsin law makes the cost of lighting, heat and janitor service a charge not upon the particular organization, but upon the community.

This movement has gained such headway that in one of the large towns of the grain belt a school board has recently made an appropriation for lighting the building, this being the first time in its history that any attention has been paid to the matter of making the buildings available for use after sundown.

A FEEDING FLOOR FOR HOGS.

The importance of keeping hog troughs and feeding yards clean cannot from the standpoint of sanitation alone cannot be overemphasized. Even with troughs of the very best design food will become contaminated if these are allowed to sink into the mire. More and more swine breeders are solving this problem by building feeding floors and a little advice along this line comes from an Indiana subscriber in the following communication:

A good feeding floor is practically a necessary part of every hog yard where any considerable number of swine are fed. Frequently in one season a feeding floor properly constructed will pay for itself in the saving of feed effected, to say nothing of its great convenience. It is of the greatest value in muddy times when it is impossible to feed on the ground without compelling the hogs to dig their feed out of the mud, and, of course, all the feed the animals don't get is wasted. Even the troughs in which the animals are given their slop and water are almost mired in the mud at such times and it is utterly impossible to keep them clean and sanitary. On a feeding floor, however, the troughs can be kept fairly clean at all times in the year. During the winter when there is a heavy snowfall that on the feeding floor can very easily be shoveled off and the floor will then be free for feeding purposes.

The feeding floor is just as necessary in summer as in winter. With the arrival of warm weather the feeding lot soon becomes a bed of dust in which the feed must be thrown if there is no feeding floor. Not so much of the feed may be wasted then, perhaps, but the cloud of dust in which the animals must eat is very detrimental to their health.

The best material from which to construct a feeding floor is concrete, prepared about the same as for a walk. Concrete is not only cheaper than lumber in the long run, but it is much better in other ways. Each hog should have at least ten square feet of floor space on a feeding floor. This calls for a floor about 16x32 feet in size for fifty hogs.

A tight board fence should be put around the floor. This fence should be about four feet high. The lower board of the fence should come within about two inches of the floor. The space beneath this board is necessary to permit the escape of water and filth during rains and when the floor is being cleaned. A fence around the feeding floor makes the latter of more value in many ways at all seasons, and it is almost necessary where much winter feeding is to be done, in order to protect the animals from cold winds. A hog will not stay out in a sharp wind long enough to eat a full ration, but with the tight high board fence surrounding the floor to break the winds, the hogs will experience very little discomfort in the very coldest of weather.

It is not advisable to put a roof over the floor. The uncovered feed floor can be kept much sweeter and cleaner, as on clear days the bright sunshine has free acess to every part of it some time during the day. A covered floor is always more or less damp and sour in spite of anything that can be done.

Gates should be set in the fence at each end of the floor. An entrance gate about eight feet wide should be set at the back of the floor. A gate of this size will permit the pigs to enter in a hurry without danger of injury after their feed has been placed. This plan of putting out the feed before the pigs are allowed to enter is one of the advantages derived from the use of a feeding floor. The entrance gate should open in, for when the pigs are kept shut out until their feed is in place it is next to impossible to open the gate against the hungry, waiting lot.

Troughs should be placed along both sides of the feeding floor. This will give sufficient trough room for all the pigs at one time without their being crowded. A feeding floor properly constructed will last practically for all time so far as the floor proper is concerned. The fence surrounding the floor will have to be renewed after a time, of course.

A feeding floor of this character can be used not only for the location of feeding troughs, but also for the feeding of ear corn. In soft weather it is advisable to flush it off frequently and in order that this may be done effectively with but little labor the suggestion should be carried out of building the floor so that it is slightly higher than the surrounding surface.

MEAT PRODUCT PROSPECTS.

A million and a half fewer cattle than a year ago. So say the government statistics. The figures are startling. They are made still more impressive by the announcement that the numbers of sheep and hogs have also suffered a marked decrease. The actual figures given for the decrease of cattle are 1,432,000 head, sheep 880,000 and hogs 4,232,000. There is no reason to doubt the reasonable accuracy of the figures.

They mean that the meat supply of the present is less by a billion and a half pounds than a year ago. They mean that at a fair valuation of five cents a pound, the farmers of the United States have suffered a loss of income of nearly one hundred and thirty millions of dollars.

The number of cattle put through the markets at the principal stock yards points was smaller last year than in any year since 1902. At those points the high tide of receipts of cattle was in 1907, when 9,590,710 were marketed. Since that year there has been a gradual decrease until the last year the reports show receipts of but 8,103,068 head.

There is, from one point of view, some satisfaction in the fact that the values of cattle have increased to $26.36 per head as against a ten-year average of $17.80.

With reference to beef cattle, considerable interest attaches to the situation in different states. Texas leads with 5,022,000 head, having a valuation of $113,497,000, or $22.60 per head. Iowa follows with 2,607,000 valued at $33.00 per head. Nebraska has 1,902,000 estimated at $32.40 each. Kansas has 1,778,000 with a value of $33.40. California has 1,454,000 with a value of $29.20. Missouri has 1,444,000 valued at $31.10. Illinois follows with 1,228,000 having a value of $31.50. Oklahoma has 1,155,000 valued at $27.60. Minnesota has 1,139,000 at $20 each and Wisconsin 1,135,000 at $21.70 each. No other state has a million cattle. The lowest valuation per head is in Alabama, where the figure is $10.10.

Milk cows are not considered in these calculations. The total number of these in the United States is given at 20,497,000, the average per head $45.02, and the total valuation $922,783,000. Wisconsin heads the list with 1,504,000, New York follows with 1,465,000, Iowa with 1,337,000, Minnesota 1,129,000, Texas 1,034,000 and Illinois 1,007,000. The highest valuation is in Montana, where the figure is $61 and the lowest Alabama at $27 each.

THE COST OF A COLT.

As having a bearing upon the profits of horse raising, as well also as upon the cost of the labor of the horse utilized on the farm, recent statistics gathered by the Bureau of Statistics of the United States Department of Agriculture are of interest. The average cost of a colt which has reached the age of three years is $104.06 for the entire United States. As an offset it is estimated that the colt will have done work enough before having reached his third year to reduce this cost $7.52, or to the net cost of $96.65. The selling value of a three year old is put at $136.17. Of course, there is a wide variance in costs in different states. For instance, in Rhode Island it is given at $156.60, Connecticut $149.98, Massachusetts $141.80, Wyoming $71.59, New Mexico $69.50.

The different items of cost are enumerated as follows: Service fee, $12.95; value of time lost by mare in foaling, $10.06; breaking to halter, $2.22; veterinary service, $2.04; care and shelter first year, $4.98; second year, $5.36; third year, $6.35; cost of grain fed first year, $4.98; second year, $7.14; third year, $9.56; hay first year, $4.14; second year, $6.61; third year, $8.48; pasture first year, $2.56; second year, $5.41; third year, $6.21; other costs, $5.01; total, $104.06.

The total cost for all feed is $56.39, being $21.68 for grain, $19.23 for hay, $14.18 for pasture, and $1.21 for other feeds. The total cost of care and shelter is $16.69. Of the total cost, 54 per cent is charged to feeds, 16 per cent to care and shelter, and 30 per cent to other items, as enumerated.

During the year 1912 the seven principal markets of the country received thirteen million six hundred ninety-six thousand four hundred and one cases of eggs, which was around a half million less than the previous year. May was the banner month, so far as production was concerned. The shipment of that month ran up to two million seven hundred and eighty-eight thousand nine hundred and seventy. In June there were only three hundred and seventy-eight thousand four hundred an sixty-seven cases.

CONDEMNS STALLION LAW.

A number of communications have been received since the change was made in the Iowa stallion and jack law which requires in the future that certificates of soundness be obtained from veterinarians in order that these might be submitted to the secretary of the state board of agriculture and the owner obtain thereby a permit certificate. These communications have come not only from stallion owners, but from those who have no financial interest in stallions save only that they are raising a few colts each year. Such a communication comes from Mr. Foster Trueblood, of Henry county, Iowa, who says:

I read with a great deal of interest the communication of Mr. P. F. Smith, in a recent issue of The Homestead. Although I do not handle stallions yet I have an interest in the horse industry and I can see that such laws must in the near and remote future work exactly in the opposite direction to which they are intended. I would agree with Mr. Smith that the owner of the stallion who handles him every day is in a much better position to furnish a certificate of soundness than is the veterinarian, and the affidavit of the owner should be sufficient without putting him to an additional expense of employing a veterinarian. I know a number of horsemen who are planning to sell their stallions and we have none too many to select from at the present time. We are not dealing with a theory in this neighborhood, but with an actual condition and I can see now that we will have to go farther and farther away for breeding purposes during the very time of the year when we should be at home. Men who have in the past had courage enough to purchase good horses are no longer inclined to make this investment because they fear that their horse might be disqualified the first time he is examined. The blow, while it is intended for the man who would traffic in unsound horses, really hits the ordinary farmer who raises a few colts annually. I predict that those states that show wisdom enough to handle this matter from the right end will, in the future, reap their reward because they will have the horses and prices will soon be higher than ever before because the supply will be more limited than heretofore.

The law, of course, is now enacted and the results of its enforcement must be abided by for at least two years. What this subscriber says about being squarely up against "condition" and not "theory" is well worth pondering over. If the law drives the good horses out of a single county in the state it will work an unwarranted hardship on the farmers of that county. We concede to no man or to no body of men the right to go further in the advocacy of using good stallions than will The Homestead, but if the choice is to be taken between the plan of having the people use the best horses they can patronize and that of having no horses at all we will choose the former. It is not that we fear the unfairness of veterinarians or anything of the sort in the enforcement of this new law, but simply that the expressions from our subscribers would seem to indicate that it has had the effect of intimidating men who might otherwise invest in good horses.

COST OF POOR ROADS.

The cost of bad roads is strikingly set forth by Wm. C. Redfield, secretary of commerce in President Wilson's cabinet, in this manner:

The inefficiency arising from bad roads makes it cost something like $300,000,000 a year to cart our cotton crop from the fields to the railway station. I think few people realize the immense tax put on us all by bad roads and inefficient handling.

I have said that if our farmers once realized the awful tax that bad roads impose upon them public opinion would sternly demand the making and maintaining of good roads everywhere. It now costs the farmer twelve, yes, twenty or more, times as much per ton mile to move his goods to the railway station as it does to move them on the railway after they leave the station. The farmer, indeed, in bad cases and at certain seasons may have to pay as much as $1 a ton mile, while the railroad carries the freight, when it once gets it, at an average of three-quarters of a cent per ton mile.

Among the factors which bring up the cost of living there are few which stand ahead of the useless cost of transportation, due to poor and often impassable roads. Poor roads not only make the consumer pay more for produce, but they rob the producer of that which should be added to the price paid him for his produce. There are few subjects on which the public is so unanimous as this one of the cost of poor roads, and yet at the same time few subjects on which it is harder to make people agree as to the remedy and where the initiative should be taken.

GROWING COWPEAS FOR SEED.

This paper does not presume that any large area of cowpeas or soy beans will be grown in the corn belt in the immediate future. This is not equivalent to saying aught against the crop. The prices at which peas have been selling for a number of years would indicate that those who grow a few acres will gain good revenue from their land. This point is referred to in a communication from a Missouri subscriber who has had some experience with the crop. Among other things he says:

With the price ranging around three dollars per bushel for the last few years, it would seem that there is profit in saving the seed. This does not necessitate the loss of the hay, and when planted in rows and cultivated they may still be cut with a mower, and shocked as usual. Use a corn planter with plates of the proper size and "double row." That is, plant rows the distance the planter is set, then split the middles, making the rows about twenty-two inches apart. A single plow may be run between the rows, or one shovel taken off the cultivator, and plowed with two horses. This cultivation will give the vines a start of the weeds, and they will soon cover the ground. When the peas are half ripe, they should be mowed and raked. Haul them directly from the field to the separator. By removing half the teeth and concaves a grain separator will clean the peas. It would be best to blow the hay right into the barn as the seeds were separated, but where this cannot be done the hay should be baled. It is not likely that all the peas will be separated, but their value will still be preserved in the hay.

On account of the high price of seed we would advise no man to go into the business extensively in the beginning. An area, say of five acres will answer all the purposes of experimentation and in all probability there will be snug profit at the end of the season. The seed is handled by practically all seedsmen and in ordering the earlier varieties like Whip-poor-will and New Era should be specified. The later varieties are not apt to mature the seed, in which case the crop could be used only for hay.

THE TRAVELING LIBRARY.

George B. Utley, secretary of the American Library Association, in a recent address calls attention to one of the factors which is playing an important part in bringing town and country still closer together and in giving to the farmer the advantages at one time enjoyed exclusively by the city man. Mr. Utley's subject was the success of the rural traveling libraries, in regard to which he said:

The rural traveling libraries are conducted through what is known as the state library commissions, bodies which have been authorized and created and organized by acts of legislature. They use state funds and are a part of the state machinery. The work began in Massachusetts in 1890. Following the move of Massashusetts to carry library work into smaller communities came New Hampshire, then Wisconsin with one of the best commissions we have, and then Ohio, until now we have thirty-one states with these state library commissions doing work with funds appropriated by the legislature. One of the principal functions of the state library commission is to establish these rural traveling libraries. There is an effort on the part of all good, serious-minded people to combat the tendency of people to live in the cities, and to make people contented with the country. The advantages which country people have now make it more worth while living there. There is the rural free delivery, the better roads which have been the result of automobiles, telephones and now comes the traveling library. At present about 45 per cent are reached by these libraries. Every state has a library worker to go out into the country among the people to learn the needs of the people of all conditions, and to study how to meet them. Sometimes people are anxious for libraries, in other cases they have to be persuaded to take them.

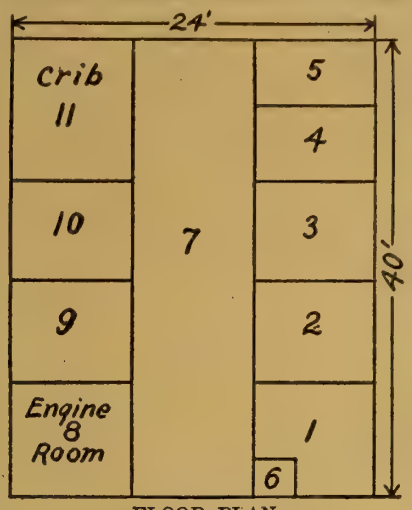
The work in Massachusetts and Maryland has been a great incentive and object lesson to the grain-belt states, which have not been slow in modeling their systems after those so successful in the East. By means of regular traveling library wagons even the most remote communities have been kept in touch with the best thought in current and classical literature and one of the reasons for quitting the farm for the town has been dispensed with. At the same time the work of the traveling library commission in the grain belt is still in its infancy.

A Good Type of Hog House.

By Chesla Sherlock.

THERE are numerous buildings in use that are expected to answer all the requirements of an inexpensive hog house. The majority of them, however, are not satisfactory.

We do not know of a single sort of building that has caused as much trouble and dissatisfaction and about which so little is known as the hog house. The accompanying illustration shows the appearance of a hog house in actual use that has proved satisfactory in every respect. It is located on the farm of Mr. W. F. Long,



FLOOR PLAN.

near Hayesville, Iowa. While the general type and appearance of the building has long been familiar to hog growers, the dimensions and interior arrangement are purely of original design.

"I had quite a time," said Mr. Long recently, "in finding a type of house that seemed practical. Each year I thought of better accomodations for my hogs, as well as myself, but the task of designing a house coupled with the fear that I might make serious mistakes caused me to put off building several years.

"Finally, I noticed a small photo of a house something on the order of one I have since erected. I had nothing to guide me but this mere outline. I managed to figure it out, after a lot of trouble, and this house is the result.

"My greatest problem, I found, was whether I was getting the windows at the right height and angle to catch the March and April sunshine in the pens. The most important thing to take into consideration in building a hog house is to get the early spring sun. After April it is not so important if you can only get it early in the year.

"Even after the house was nearly finished and I was positive that my calculations were correct, neighbors told me the windows were too high. One man even pointed out the experience of his own failure. I allowed the greater part of this gossip to pass in at one ear and out the other, but I was rather nervous until March and April came and found that I had judged correctly.

"I did every bit of the work myself and in figuring up the cost of the building I did not count my own labor. The actual money cost has been $350, but when I have added a few little luxuries, as planned at first, the total cost will be $450 complete.

"For years I have managed to exist with old sheds and small pens, which were a terrible nuisance, to say the least. Now, when I can manage every hog on the place under the same cover and have everything convenient, I feel like kicking myself for being so slow in erecting a good house."

It cannot be doubted that Mr. Long would also like to kick his fellow farmers, who, like himself, are continually putting off the erection of a suitable house to care for their hogs, in an effort to wake them up and let them in on a good thing.

The house is 24 feet by 40 feet in size and is 18 feet high at the highest point. This size house will provide ample accommodations for the usual number of hogs grown on a 200-acre farm.

The floors are of concrete six inches thick, while the outer wall or foundation is eight inches thick. One hundred and sixty sacks of cement were required for the floor.

The house is divided the long way into three sections, each section being eight feet wide and forty feet long. At present the center section is used as a driveway, but Mr. Long intended it for use as a feeding place for the animals during bad weather.

There are two rows of pens, which are arranged on each side of the driveway and they, also, are eight feet in width and forty feet long. The south section of pens is divided into five pens each eight feet square. Pen No. 1 is used during the warm months for a wallowing pen, as it is made four inches lower than the others, thereby allowing water or dip to be turned into it. It is needless to say that this pen is much in demand during hot weather.

In one corner of this pen is found a watering device which is fed from a concrete tank located near the windmill. This watering device is of the common float-operated type, but Mr. Long has changed it somewhat, in that it is built into a small concrete tank. This prevents the water freezing during cold weather, as sufficient padding and insulation is provided to keep the water above freezing temperature.

The other four pens on the south section are merely of the regular type. At present only two pens on the north section are being used for the accommodation of the hogs. Pen No. 8 will be fitted with a gasoline engine and proper appliances to grind all feed needed for use on the farm. The engine will be portable, so that it can be taken to all parts of the farm to perform various tasks, such as pumping water, sawing wood, filling silos and a hundred and one other tasks too numerous to mention.

HOG HOUSE WITH ENOUGH SUNSHINE.

Pens No. 9 and 10 are used as individual pens for sows at farrowing time and are found especially convenient early in the season, as they catch plenty of sunshine from February to May. Pen No. 11, which is the equal of two of the other pens, is used as a corncrib and will hold 430 bushels of corn at one time. A sort of loft or mow is built above the north section to hold plenty of straw at hand for use as bedding. This has been found very convenient. With water, corn,

(Continued on page 28.)

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Clover seed is so high in price this spring that everyone remembers how good a stand was once secured by sowing a remarkably small amount of seed. It certainly is too high priced to sow more seed than is necessary.

Grass seed is quite the opposite of clover, so the mixtures are very apt to contain more grass than clover. Where wanted for pasture this is not always a bad failing.

I am a great believer in planting corn a medium and uniform depth. Going deep to reach moisture or planting shallow to escape moisture is not always the right thing. The deep-planted seed may be flooded and the shallow planting be dried out.

When a number of sows are farrowing close together, and some litters are large and others small, it is often possible to take from the large litter and give to the small, thus evening up the numbers. It is a good idea, however, to watch matters for awhile, to see that the adoption is going to prove successful.

If you want to sow a mixture of grass seed, it is my advice to buy the several kinds you wish to sow and do the mixing yourself. I know of several neighbors who bought seed already mixed, and the mixing was done with view of economy, rather than in consideration of the proportion the mixture should contain. Some even had every appearance of being floor sweepings.

Farms that are lacking in natural timber should be producing an artificial grove. I have ten to twelve acres of natural timber on this farm, yet a half acre was set to catalpas a few years ago, and now I wish it had been three or four times as much. I consider the catalpa one of the greatest trees we have.

Good timber is becoming so scarce that wagon and vehicle makers are beginning to wonder where they are going to get good stuff, particularly for wheel material, a few years hence. The iron wheel is all right when the height is low and the tire broad, but I am afraid it never can be made to exactly replace the common height of wheel used on farm wagons and buggies.

It seems to me that blacksmiths do not get as many jobs of pointing cultivator shovels as they used to. I can remember when it was a common thing to make a set of shovels last for years and years, but they are so much cheaper now that when a set has become badly dubbed off it seems cheaper to buy new, rather than have the smith stick on new points.

A sow can be kept too long, and often many of us keep some old thing a year too long. We wait until she fails with a litter before shipping her. I have one that has a complete failure chalked against her, and now she will go to market as soon as she can be made ready.

It may not pay to keep any very great surplus of corn in the cribs, yet it is sometimes mighty comforting to know that it is there. One year with another, counting out shrink and interest on its value, I doubt if there is profit in holding corn from one season to the next, but it sometimes comes in handy to have to feed out a bunch of hogs when no one else is feeding because of a corn shortage. At such times the price is usually right.

The weather man handed us a whole case of London without any trimmings, as far as getting into the field is concerned during the first half of April. We needed the moisture and perhaps this rain and snow are just what we needed to give our annual bumper crop a start.

Co-operative shipping associations are being organized in many parts of the corn belt. Their main feature is to give those who market less than a carload of hogs or cattle at a time a chance to club together and sell their live stock at the larger markets, thus saving the slice that goes to the local buyer. The theory is sound and in time will win out. There are altogether too many slices taken from the farmer's product before it reaches the consumer.

Water will change the best of earth roads into a streak of mud in a very short time and right here is the kernel of our road problem. How shall we keep the water from soaking into the traveled part of our roads? There are many who seem to be willing to tell us how, but very few are able to "show us." Tiling and dragging are the only things that have "delivered the goods" to date.

Cattle that are given the run of the farm will be sure to smell the grass before it shows above the surface and will promptly turn up their noses at the very best of dry forage that can be put into the manger. When forage is as plentiful as it is this spring it is best to keep the cattle in the yard until the grass gets a fair start.

There is a movement on foot to employ an expert to every county to give the farmers the latest information on how to raise and care for crops and live stock. This looks good on paper and if enough "experts" can be found that are made up on the basis of nine parts diplomat to one part expert it may be a success.

Everything points toward a bumper crop of apples this year. The buds are late enough so that Jack Frost will hardly dare come back and breathe upon them and the trees have a hearty look. This will be a favorable season to spray a few trees "to see how it works."

In confining any animal, especially a male that is used for breeding purposes, it always pays to make the confinement strict and safe right at the beginning, as one break out practically ruins such an animal, and if he can be confined at all after one of them it will require a much better and stronger fence than it would have taken in the start.

Spring is here and the man who has horse power is lucky. Horses may be pushed off the earth by the gas tractor some day, but the man who must buy one or more at present is not finding bargains in bunches.

The grain drill is a costly piece of machinery, and very easily damaged by rusting, cracking and warping if left out in the weather. Keep it in shelter, unless it is actually in use, and then try to drive it to some shed or barn every evening after using it in the field, or if it is not to be used again for a day or so.

The motorcycle and the bicycle may appeal to many farmers as a sort of joke, so far as practicability goes, but either of them could be made to fill an important position on ninety-nine out of every hundred farms. They are much quicker and easier put in condition for whisking to town after some much-needed repairs for the hay tools, implements, etc., than the team or automobile; the trip can be made just as quickly or a little quicker and the expense is practically nothing.

No-Rim-Cut Tires
10% Oversize

How Do We Afford Them?

You ask, perhaps, how tires like these can be sold at Goodyear prices.

The utmost in tires—the final result of 14 years of betterments.

Tires that can't rim-cut—tires 10 per cent oversize.

One process alone costs us a million dollars yearly more than processes generally used.

How are such tires—tires that give such mileage—sold as low as Goodyears? Let us tell you.

Our Cost

We are the world's largest tire builders. We build almost as many tires as any other two plants combined.

Our factories are new. Our equipment is modern. We have invented a wealth of labor-saving machinery. We employ efficiency experts.

Our capital cost is exceedingly low, due to small capitalization.

Grade for grade, our cost of making must be far below the rest

Our Profit

Our profit last year averaged exactly $2.90 per tire.

That is on tires costing all the way from $15.55 to $104.95, according to size and type.

That is getting profit down to the minimum. For the $2.90 per tire must pay the interest on millions of capital invested.

That low cost and small profit tell why tires like these sell at Goodyear prices.

Lower Prices

Of course tires can be made to cost less. Tires can be sold at half our prices, yet pay a larger profit.

But tire cost means the cost per mile. Goodyears cost far less per mile than any other tire that's built.

The Evidence

This is shown by the fact that Goodyears far outsell the rest, after 2,000,000 have been used.

Our sales last year were larger than the previous 12 years put together.

That's the result of testing these tires on hundreds of thousands of cars. Men have proved enormous savings.

The No-Rim-Cut feature ends rim-cutting completely. The 10 per cent oversize, with the average car, adds 25 per cent to the tire mileage.

You will see these savings clearly when you test these tires.

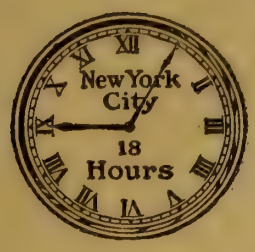
CURRENT EVENTS

THE long anticipated break between the Balkan allies has occurred and Greece and Bulgaria are concentrating their troops with every evidence of starting war against each other in the near future. The prime cause of difference is the possession of Saloniki, one of the strong strategic points captured from the Turks. While the allies are thus confronting each other another armistice has been arranged with Turkey, the powers having intervened, with prospects good of peace being declared in a short time, Turkey retaining Constantinople and a small tract immediately contiguous thereto and surrendering the remainder of its European territory to the allies. The King of Bulgaria is of foreign birth and has long been ambitious to build up an empire. Seeing his opportunity in the Turkish war he has pursued an imperial policy, demanding possession of the greater part of the territory captured by all the allies. Under the late King George and under the present King Constantin, the Greeks waged a successful naval campaign and are entitled to almost an equal share with the Bulgars who now deny them the right to the chief spoils of war. With these two allies thus antagonized and with Montenegro opposing Austria-Hungary and denying the authority of the big powers, the Balkan federation is in a sad way, although the Turk is now so crushed that it is doubtful if he can take advantage of the situation.

CALIFORNIA'S attitude on the alien land ownership problem continues to embarrass the Wilson administration. During the past week Secretary of State Bryan and President Wilson were in frequent communication with Governor Johnson and the California legislature, urging that no bill be passed which in any way abrogates or conflicts with the present treaty between the United States and Japan. Notwithstanding repeated assurances by Governor Johnson that no such action was contemplated, the legislature persisted in discussing bills which are considered by Japan as a serious affront. The situation in Tokio has become so critical that numerous mass meetings have been held in which speeches against the United States have been delivered. President Wilson proposes, should the California legislature insist upon singling out Japan and forbidding its citizens to own or to lease real estate, to refer the matter to the California people on a referendum vote. Failing in this he is hopeful that the courts will set aside the legislation. In the meantime the Japanese government is holding matters in abeyance, accepting the assurances of the Wilson administration that everything will be done to avoid serious trouble. The conflict arises over the efforts of the California legislature to make it impossible for aliens, who are ineligible to citizenship, to own or lease large tracts of land which might be used in the event of war between the two countries.

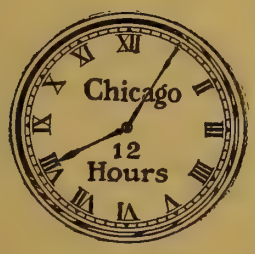
FERVENT faith in Christianity was the dominant keynote of the remarkable will left by the late J. Pierpont Morgan. Before making any bequests or entering into the disposition of his property in any manner, the famous financier wrote this striking declaration of faith: "I commit my soul into the hands of my Saviour, in full confidence that having redeemed it and washed it in His most precious blood He will present it faultless before the throne of my Heavenly Father; and I entreat my children to maintain and defend at all hazard, and at any cost of personal sacrifice, the blessed doctrine of the complete atonement for sin through the blood of Jesus Christ, once offered, and through that alone." The value of the Morgan estate is not disclosed, but it mounts high into the hundreds of millions. The great bulk of his property is left to his son, every man in his employ at the time of his death being remembered with a generous bequest and numerous large amounts being left to favorite charities. Mr. Morgan requested that his famous art collection, the greatest in

The Wonderful Jeffery Service to Owners



THE Jeffery Company considers that every Cross Country owner is a stockholder in the service organization. His dividends are paid in the increased satisfaction he enjoys through the service such an organization provides.

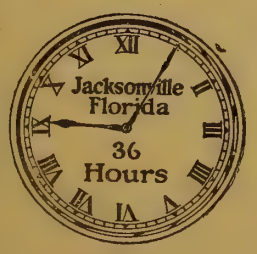
A stock of duplicate parts, amounting in value to one-half million dollars, is maintained by us at the factory and branches, while all distributing dealers also maintain stocks.



WE have all the original patterns, dies, jigs and tools for every part of every Rambler car ever made. This stock is carried that we may assure to owners quick delivery of parts even of old models.

The price of Jeffery parts is one-half to two-thirds lower than that of parts for other cars.

THE Jeffery service organization not only includes an efficient department at the factory, but it is supplemented by a corps of experts on the road and by nearly five hundred branches and distributing dealers. The branches maintain a complete stock of parts, while the larger distributing dealers have all those for which there would ordinarily be any demand.



The clock faces show the time it would ordinarily require for the owner to get a part after his order reaches one of our distributing points.

A beautiful four-color reproduction of the Cross Country, from an oil painting by R. Philip Brainard, is ready for mailing. See the Cross Country by all means, at any Jeffery branch or dealer's display room, but send for the picture anyway.

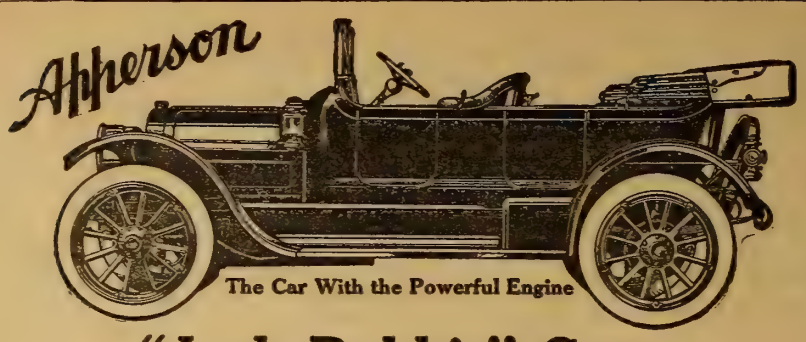
Rambler Motor Cars



"Jack Rabbit" Cars
Last 20 Years

This is not a claim. It is a certainty.

We have been building cars 20 years. The first American gasoline automobile was produced by the heads of this house, in 1893.

Still in use, are Apperson-made cars 17, 18 and even 19 years old.

Mechanical troubles have been practically unknown to Apperson owners for 10 years.

Of the 17,000 "Jack Rabbits" in use, the average age is 8 years. No "Jack Rabbit" has ever worn out.

We have the proof when we say—"You are insured a service of 20 years and longer in a 'Jack Rabbit' car." You can safely invest, if necessary, a lifetime's savings in a "Jack Rabbit" car.

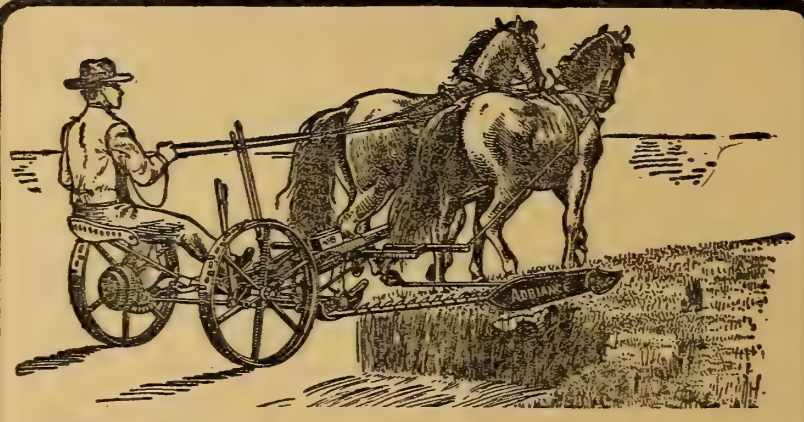
It should be the only car you will ever need. It will cost you less for upkeep than any other car. Low fuel consumption. Low tire expense. Little or *no* mechanical expense.

It is upkeep cost, and not first cost, that is the *real cost* of an automobile.

Give the "Jack Rabbit" thorough consideration. To enjoy its great strength, beauty, comfort and endurance is *economy*. Write today for the "Jack Rabbit" catalog and get all the facts.

Electric Self-Starter and Electric Lighting Furnished if Desired

Apperson Bros. Automobile Co.
319 Main St., Kokomo, Indiana



"I've Used My Adriance Mower for Over 40 Years—It's in Excellent Condition Today"

Hundreds of farmers who bought Adriance Mowers forty to fifty years ago are still using the same machines, with excellent results.

Could you find any more convincing evidence of superior construction?

From the ground up, every piece of material entering into the construction of the Adriance is most carefully selected and is the best that money and skill can produce.

It is very simple in construction. The main frame is a single piece—wonderfully strong and rigid, insuring perfect alignment of shafts and mesh of gears. It is the easiest to handle. The levers are handy and easily operated from a comfortable position in seat. One easy forward acting foot lever in front of the driver does the work with natural movement of the leg.

It is the lightest draft Mower on the market. The patented Adriance Spring Draft Device lightens the draft and completely overcomes shock or any danger to the driver, team or mower should any obstruction be struck.

Built for one or two horses—3½ to 6-ft. cut.

ADRIANCE MOWERS GIVE THE BEST SERVICE FOR THE LONGEST TIME AT THE LEAST EXPENSE

this country and one of the greatest in the world, be devoted permanently "to the instruction and pleasure of the American people," but he did not bind his heirs absolutely to this disposition of his treasures. That he was a devout Christian was one of the traits of the many-sided Pierpont Morgan of which the business world was not aware, knowing him rather as a captain of industry and a financier whose money power was greater than that of any man who ever lived.

ROALD AMUNDSEN, discoverer of the south pole, hopes to have the honor of being the first to navigate a ship through the Panama Canal. He has applied to the war department for the privilege to take his famous vessel, the Fram, through the canal at the start of his voyage to the arctic regions next winter, and Colonel Goethals, builder of the canal, reports progress so satisfactory that there is good prospect of the canal being so near completion that a vessel can be sent through it within the next eight or ten months. If the Fram has this honor it will add to its long list of notable achievements. It was the vessel in which Nansen, the famous Norwegian explorer, reached the farthest north prior to the discovery of the north pole; it was also the vessel in which Captain Amundsen discovered and navigated for the first time in history the northwest passage; also the vessel in which Captain Amundsen voyaged to the south pole. Captain Amundsen hopes to take the Fram further into the arctic circle in his forthcoming expedition than it has ever been before, it being his plan to drift, if possible, clear to the north pole, proposing to spend five years in the undertaking hoping to be the only man to reach both the north and south axes of the world.

MAY 5th is the date set for the introduction of the tariff bill into the senate, it being confidently expected that the house will have taken favorable action upon it by that time. The democratic ways and means committee of the house accepted the bill in its entirety and recommended it for passage last week, the republican and progressive members of the committee uniting in an adverse minority report. The debate was limited to five days, so that little time will be lost in getting the tariff revision bill through. The senate finance committee has decided against public hearings, although granting the privilege to interested persons of filing briefs or statements bearing on any of the tariff schedules. President Wilson was entirely successful in his efforts to secure free wool and a gradual reduction of the sugar schedule. There is every prospect that the house will pass the bill by a large majority. The real fight will come up in the senate, where the democratic margin is but small and where a falling out in the democratic ranks is anticipated in many quarters.

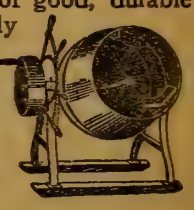
PERSONAL and political difference between Wm. J. Bryan, secretary of state, and Champ Clark, speaker of the house, were patched up at a recent meeting of the two men. It will be recalled that at the Baltimore nominating convention Speaker Clark received a majority vote long before Governor Wilson received the necessary two-thirds vote. It has always been customary for the democratic party to give the candidate receiving a majority vote the necessary two-thirds and the nomination, but because of the stand taken by Mr. Bryan Speaker Clark failed to receive the necessary number and the honor of leading his party to the White House. The feeling was so bitter between the men for a time that it was expected Mr. Clark might be defeated for reelection to the speakership and it was freely predicted that the two men would be unable to serve harmoniously in the prominent places they now occupy. That peace has been restored between them is not only extremely gratifying to President Wilson, but also shows that the break in the party ranks, which has been frequently predicted, is apparently quite remote. Wm. R. Hearst, the newspaper publisher, has come out in a strong and biting attack on President Wilson, but this is the only public evidence thus far of any falling out in the ranks, while President Wilson has the people with him so strongly that he has lost practically no prestige as a result of the Hearst attack.

AT THE end of one week of the industrial strike in which one-half million Belgian workers were engaged, the Belgian government has receded from its position and promises to grant the electoral reform demanded. A special session of Belgium's congress will be held, at which the unjust laws by which votes are apportioned according to position and education will be repealed. This is the first time in history that a political reform has been won by means of an industrial strike. The week started with 250,000 workmen leaving their posts and closed with fully one-half million men on strike. The best of order was maintained throughout the week, however. The loss to Belgian industry is estimated at many millions of dollars and became so serious that the government gave in much sooner than had been anticipated. Under the prevailing system Belgian citizens are entitled to votes according to their age, the amount of taxes paid and position held. At the last general election the number of voters was 1,700,000, of which 995,000 had one vote, 395,000 two votes and 310,000 three votes. The strike was for uniform suffrage, giving to every man but one vote, a reform which, unless the Belgian government fails to keep its word, will shortly be granted.

AFTER a protracted illness, which several times promised to be fatal, Pope Pius X. is now on the highway to recovery, although his advanced age makes an active resumption of his high duties out of the question for some time to come. His condition was so serious for a time that the last rites were administered to him and it was generally feared that the demise of Leo's successor was imminent. The pope was greatly cheered by a dream which he had, in which his dead sister appeared and said that his time had not yet come. Pope Pius is a man of extremely simple personal habits, enamored of his family, so that the presence of his sisters, brother and favorite nephew went a long ways toward restoring him to health. He has broken a number of the rules of the Vatican, chief among them being the one prohibiting any woman from dining with the pope. Pius has frequently had his sisters share his table with him, enjoying their presence immensely. He is a man of great humanity, broad charity and undoubted goodness.

CONCRETE MACHINERY

Did you ever stop to consider that the secret of good, durable concrete is largely due to the mixing; that no matter how careful you may be in getting the proportions correct, if it is not properly mixed it is worthless?



The Iowa Line of Mixers All Mix Perfect.
Manufactured by
Iowa Foundry & Mfg. Co.
FORT DODGE, IOWA.
Everything in Concrete Machinery.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

EXTREME SANITATION NECESSARY WITH POULTRY.

To the Editor of The Homestead:

A great many questions have come to me recently asking why farm hens are more apt to become subjected to disease and various pests than hens kept on commercial or fancy poultry farms.

At first thought it would seem absurd to even think for a moment that farm poultry is more liable to suffer the effects of disease and pests than poultry kept elsewhere than on the farm. It would seem as a direct insult against every American farmer and his intelligence.

Lately I have given the matter more thought and in traveling around the country visiting various farm homes I have taken special care to observe the farm flock with this thought in mind. What I found and the conclusions I have drawn are based on actual facts as gathered from the various farms visited.

I was surprised to find that the contention that the farm hen is liable to suffer all the ailments on record had a good deal of truth. Please understand that I do not mean by this statement that simply because a hen lives on a farm, she is hopeless and will have all the diseases known and common to poultry. What is meant is that for some peculiar reason farm fowls, generally, give more trouble than other hens.

It took quite a while for me to decide what was the cause of this fact. Invariably I found large roomy houses constructed along the modern idea of what is right in the henhouse line. About 60 per cent of the farms visited boasted of fresh-air houses, dropping boards, trap-nests and numerous other appliances associated with modern poultry culture.

I questioned all the farmers who had scaly-legged fowls or fowls that seemed to be afflicted in any way as to their methods of management; what they fed the hens; how often; at what season of the year they experienced their greatest difficulty, and a hundred and one other questions in an effort to ferret out the real cause of ailing fowls.

The method of management seemed to be all right, the rations fed were satisfactory and in the majority of cases the houses where the fowls were kept were of the very best. It seemed to be the general rule that more trouble was experienced during the fall and spring months than at any other time.

The experience of a visit to one farm in particular will serve as a fair guide to what I found:

On approaching the farm I was pleased with the large barns, hog house and cribs that were everywhere in evidence. Everything was painted in neat colors and had the appearance of belonging to a man that was "fussy" about the appearance as well as the serviceability of his buildings. Concrete tanks and a model henhouse coupled with the fine animals to be seen on all sides filled me with enthusiasm such as can be aroused only on finding an up-to-date farmer with an up-to-date farm.

As said before, the henhouse was a model in appearance from the outside and was of the fresh-air type. It was slightly raised off the ground and, I judge, was built to accommodate one hundred hens. Before entering the house I asked the owner if he experienced any trouble with sick fowls of any sort.

"No" he said, "I never have any trouble with my hens being sick. In fact, there has never been a sick chicken on the place. But, once in a while, some will stand around and sleep themselves to death."

"Ah," I thought, when he mentioned the much-used word "sleep," "we are beginning to get down to the facts."

"What seems to be the trouble when they sleep?" I asked.

"Oh, nothing! We never bother about them. We just turn them into the orchard where they will not have a chance to run with the other hens and let them alone. They usually die."

Doesn't this sound natural? The owner seemed to be very busy and soon took his leave to attend "to the stock." I made a personal examination and found the cause of the "sleeping" hens.

If the outside of the house was a model in appearance, the appearance of the interior could not be suitably explained in the English language. Dropping boards had been made, but, from all appearances, had never been cleaned since the house had been constructed, nearly two years before my visit. The hens had scratched in the litter until it was broken up to nothing and was little more than a pile of dung. The nest boxes were a "solid mass" of filth and looked as though they had never been graced with clean straw. The windows were covered with two-years dust and the muslin curtains were so dusty that fresh air could not possibly come through them. Never have I seen a more dismal looking house—that is, from the point of view of the hens!

The ventilating conditions were such that when the door was closed at night the house was practically air-tight. Pack 100 hens into such a place, with a ton of dung under them, and imagine how long it would take to exhaust the available supply of air. Also remember that a hen breathes seven times faster than a human being and therefore requires several times as much air.

The heavy fumes created by the large mass of droppings and filth were enough to give any hen the desire to "sleep herself to death." Even had the house been properly ventilated these fumes could, to a certain extent, have been eliminated.

I have considered every probable cause that could in any way be responsible for the general trouble with farm hens being easy prey for disease and have decided that lack of proper sanitary conditions has more to do with the matter than anything else. Bad sanitary conditions are nearly always the rule on the average farm instead of the exception. If there is anything that will cause disease to get a foothold in any flock it is improper care of the flock in regard to matters of sanitation.

Where a flock is subjected, for any length of time, to such conditions as found on the particular farm mentioned, it cannot be doubted that the vitality will be weakened and the effect on the following generations of fowls will be noticeable to a great extent.

The reasons why the hens belonging to the commercial poultry farms and to the fancier are not subjected to disease, as a rule, is because due attention is given to the sanitary conditions under which the hens are forced to exist.

It is time for the farmer to wake up and realize that cleanliness is just as essential in the henhouse as it is in his own home. If he would only keep the poultry buildings and yards as clean as he keeps the houses and yards that care for other forms of live stock on the farm, he would be able to do away with, for all time, the bugbear of sick hens.

Polk Co., Ia. Chesla Sherlock.

Co-operative dairy societies draw a large business in Germany. Of the 3,303 organizations of this kind doing business in 1911, 2,520 reported that they sold 757,623,000 gallons of milk in the course of a year, and 2,169 reported that during the same period they sold dairy products to aggregate a value of $58,304,400.

Feed Growing Chicks Right

They must be furnished with the right kind of material if they are to make satisfactory growth of muscle, bone and fe ther. Profit lies in quick growth and early maturity. Rush those cockerels to marketable size and turn them into cash before prices fall. Get the pullets completely developed and ready to fill the nests with fall and winter eggs.

Pratts Baby Chick Food

contains just the necessary ingredients to give them during the first three weeks the best possible start, at a cost of 1c per chick. In boxes and bags, 25c, 50c, $1 up. After the third week mix

Pratts Poultry Regulator

in the ration to aid digestion and make the greatest gain for every pound of feed consumed. 25c, 50c, $1. 25-lb. Pail, $2.50.

"Your money back if it fails."

Our products are sold by dealers everywhere, or

TELLS WHY CHICKS DIE

J. C. Reefer, the poultry expert, of 1630 Main St., Kansas City, Mo., is giving away free a valuable book entitled "White Diarrhoea and How to Cure It." This wonderful book contains some new scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. Everyone interested in poultry should certainly write Mr. Reefer for one of these valuable Free books.

To Prevent White Diarrhoea

Dear Sir: I was losing my young chicks last year by the dozen, when I noticed Walker's Walko Remedy recommended by a lady. I sent (M. O.) for two 50-cent packages to the Walker Remedy Co., U. 12 Lamoni, Iowa, and can say that it not only cured all the sick ones but checked and stopped the disease, White Diarrhoea; and I had fine luck with my later hatchings—raised practically all of them.

Mrs. C. C. Jones, Blackwater, Mo.
—Adv.

Young Chicks

At this time, when millions and millions of little chicks, turkeys and ducks will be incubated into the world, every available human agency will be employed to combat the deadly influences of Gapes, Cholera, Indigestion, Legweariness and hundreds of other fatal poultry diseases. Success depends upon your ability to conquer these diseases. Dr. Hess (M.D., D.V.S.), just twenty years ago, was puzzling over this same proposition and the prescription shown herewith is his solution. It represents

DR. HESS POULTRY PAN-A-CE-A

and no one can dispute the absolute, positive value of the remedy for the above-named poultry diseases, because the best authority on earth recommends them. Don't lose your flock after it arrives—insure and protect the lives of your little chicks with poultry Pan-a-ce-a.

Our Proposition. Feed Poultry Pan-a-ce-a all spring and summer. If you are not satisfied beyond a shadow of doubt that it has cured your chicks of gapes, cholera, legweariness and the like, the dealer is required to refund your money. 1½ lbs. 25c. (mail or express prepaid, 40c); 5 lbs. 60c: 12 lbs. $1.25; 25-lb. pail $2.50. Except in Canada and the extreme West.

DR. HESS & CLARK
Ashland, Ohio

Dr. Hess Poultry Pan-a-ce-a contains:
Potassium Nitrate. An Eliminant.
Nux Vomica. A Nerve Tonic
Quassia. A Bitter Stomachic and Appetizer.
Hyposulphite of Soda. An Internal Antiseptic.
Iron (Sulphate). A Blood Builder.
Iron (Red Oxide). A Blood Builder.
Carbonate of Lime. An Antacid and shell forming.
Sodium Chloride. An Appetizer and Cleanser.
Under the supervision of Dr. Hess (M.D., D.V.S.) the above is carefully compounded and blended with just enough cereal meal to make a perfect mixture.

Dr. Hess Stock Tonic puts horses, cattle, hogs and sheep in the pink of condition. After the long winter on dry feed stock need a tonic. Besides, Dr. Hess Stock Tonic saves feed by increasing digestion. By the old methods of feeding stockmen had to let the hogs follow the steers in order to save some of the grain wasted through non-digestion. It is possible to save a part of this by strengthening the digestive organs. Sold on a liberal money-back guarantee. 100 lbs. $5.00; 25-lb. pail $1.60 (except in Canada and extreme West and South). Send 2c for Dr. Hess Stock Book.

FREE. Dr. Hess (M.D., D.V.S.) will at any time prescribe for your ailing animals free of charge if you will send him full details. Mention this paper and send 2c stamp. 96-page Veterinary Book also free.

POINTERS.

—Mrs. James Pedley, Britt, Iowa, as per advertisement elsewhere in this department, will make a reduction on White Plymouth Rock eggs for the remainder of the season.

—Baby chicks from prize-winning Barred Plymouth Rock stock of the very best Bradley Bros. breeding are advertised for sale by Mrs. L. C. Reese, Prescott, Iowa, on page 11.

—Mrs. Jack N. Gatzemeyer, Bancroft, Nebraska, advertises White Plymouth Rock eggs on another page. Her prices are reasonable and her stock exceptionally good.

—The advertisement of C. H. Nash, New Hartford, Iowa, offering eggs from Single Comb Rhode Island Reds, appears elsewhere in this department of The Homestead.

—C. V. Douglas, Tecumseh, Neb., has been a breeder of Single Comb Brown Leghorns for twenty years. In his advertisement appearing elsewhere in this department he is offering eggs for sale at a very moderate price.

—The advertisement of Otto Falkenhainer, Algona, Iowa, offering Single Comb White Orpington eggs for sale, from his regular stock and also from a selected pen, appears elsewhere in this department of The Homestead.

—Mrs. M. W. Coan, Little Cedar, Iowa, writes: "My White Plymouth Rocks are good, pure-bred stock and in healthy condition. My flock is headed by high-scoring cockerels sired by the grand champion at the Des Moines show.

—W. H. Ilsley, Milo, Iowa, proprietor of the White Wing Poultry Yards, breeds White Wyandottes exclusively. In his advertisement elsewhere in this department Mr. Ilsley is making a very low price on eggs for the balance of the season.

—Mrs. S. E. Newell, Audubon, Iowa, has pure-bred Black and White Langshan, Single Comb Buff Orpington, Light Braham and Rose Comb Rhode Island Red eggs for sale, at prices named in her advertisement found elsewhere in this department.

—T. B. McDonald, Lovilia, Iowa, is advertising Chinese Pheasant eggs, from pure-bred birds, for sale in his advertisement appearing elsewhere in this department of The Homestead. For information in regard to the Chinese Pheasants write Mr. McDonald.

—Mrs. Minnie McConaughy, Martelle, Iowa, has three cockerel and two pullet mated Barred Plymouth Rock pens from which she is selling eggs at half price after May 5th. Send for her free egg circular. Her advertisement appears elsewhere in this department.

—Elsewhere in this department of The Homestead appears the advertisement of the Eggland Farm, Mt. Vernon, Iowa, quoting prices on Single Comb White Leghorn eggs. They write that they have a grand flock of birds and that orders for eggs are coming in in fine shape.

—James Jensen & Sons, Newell, Iowa, are offering White Plymouth Rock eggs for sale in their advertisement appearing elsewhere in this department. They raise from 600 to 800 chickens every year and cull down to about 150, which insures a very uniform flock.

—The advertisement of G. H. Blake, Oelwein, Iowa, offering White Plymouth Rock eggs, from high-scored, full-blooded stock, will be found elsewhere in this department. Mr. Blake will guarantee satisfaction on all eggs that he sends out.

—F. W. Mack, Spencer, Iowa, is advertising in the proper department of this paper, that he is offering for sale Barred Plymouth Rock eggs for hatching. These are from hens weighing from seven to ten pounds, nicely marked and bright in every way.

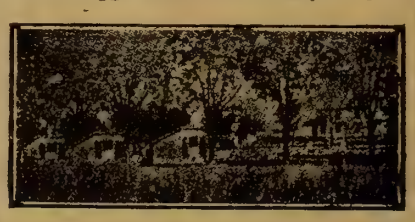
—Readers of The Homestead in need of Partridge Wyandotte eggs should read the advertisement of Good Bros., Montezuma, Iowa, that appears elsewhere in this department. They report that they have some extra fine hens of the above variety from which to supply The Homestead readers with eggs.

—Mrs. W. S. Kern, Plainfield, Iowa, wishes Homestead readers to write for her special rates on Barred Plymouth Rock eggs for the remainder of the season. She will sell them either in single settings or by the hundred. She has a flock of hens that are of the best layers, large, heavy-boned birds, with good markings.

—W. L. Mouser, Red Oak, Iowa, in his advertisement found elsewhere in this department, is offering Single and Rose Comb Rhode Island Red eggs at half price. Write him for prices and get winnings of his Reds in the big shows of western Iowa and at Omaha. He also has many testimonials from satisfied customers.

Orpington Farm.

The engraving which appears herewith shows some of the buildings of the Orpington Farm, Big Rock, Ill., the home of high quality Buff and White Orpingtons. For the remainder of the season eggs of either variety will be



offered at the special low price of $5 per 100. The whites are of the pure Kellerstrass strain and not to be excelled. A few choice hens and cockerels are also offered for sale at bargain prices. See advertisement on another page. Address Orpington Farm, Big Rock, Ill.

Barred Plymouth Rock eggs from prize-winning stock are offered for sale in the advertisement of Mrs. Paulsen, R. D. 5, Harlan, Iowa, on page 11 of this issue.

—Read the advertisement of James W. Grinstead, Jr., Mitchellville, Iowa, appearing elsewhere in this department, offering White Wyandotte eggs for sale.

—Mrs. Henry Queckborner, Chadwick, Ill., writes: "The Single Comb Rhode Island Red eggs I am selling are hatching fine. I have received splendid returns from the advertisement I have in The Homestead. I shipped over 3,000 eggs last season and not a single complaint." See advertisement elsewhere in this department.

—A. E. Muxlow, Independence, Iowa, whose advertisement offering Barred Plymouth Rock and Indian Runner duck eggs for sale appears elsewhere in this department, writes: "My birds are large and well barred, headed by winners at the Buchanan County Fair and also at the Independence Poultry Show. I won ten prizes this year. I have been a breeder of Barred Plymouth Rocks for nine years."

—Mrs. Geo. Roe, Bellevue, Iowa, writes: "My White Wyandottes are very choice, the farm range flock being headed by pure Dustin strain cockerels. My stock is all large, pure white and of fine quality. My special pen consists of eighteen Dustin strain females headed by first and second prize cockerels at Maquoketa. I pack eggs carefully and will guarantee satisfaction." See her advertisement elsewhere in this department.

Fills 60-ft. Silos With Ease!

The day of the skyscraper Silo is here. No Silo too high for the Smalley! Mr. H. E. Williams, Clinton, Wis., says: "The Smalley No. 18 Force Feed cutter with chain drive blower did fine work. We filled one silo 14x36 feet in 8 hours with 8 teams hauling the corn." When C. I. Cook, Menominee, Mich., wanted to fill the 4 biggest Silos in the U. S. he got a Powerful "Smalley." Real business farmers like Messrs. Williams and Cook have no time to fool with the old slat-apron type of machine. They want this force-feed chain-table, grip-hook kind, made by Smalley only. Thus they save a tremendous amount of work and do a quicker, cleaner job. No coarse, uneven silage. All uniformly cut. Which means greater tonnage per silo.

POWERFUL SMALLEY FORCE-FEED SILAGE CUTTER

not only handles green silage, but is also a wonder at cutting dry feed. Handles alfalfa, for instance, to perfection. Letters in catalog prove it. Many farmers use their Powerful "Smalley" to cut corn in the fall and oats and peas in the spring for feeding when pastures dry up in July. Only one drive pulley on Blower outfits. No Idler to bother with. Ten per cent steel guaranteed in all foundry castings. No oiling by hand—hard oil cups on all important bearings.

You won't know what a real Silo Filler is till you've seen the Powerful "Smalley" or had the Smalley Catalog. Why not send a postal this minute for the latest Smalley Catalog and learn about the Silage Machine that four out of five silo owners now use? Write now and you'll get this fine, useful Book by return mail.

SMALLEY MFG. COMPANY

55 Years of Honest Manufacture (68)

THE salt that melts in the butter makes the butter that melts in your mouth.

Fancy butter is mostly a matter of cream. But don't forget that it's partly a matter of the *right salt.*

Ordinary bitter salt handicaps your butter; holds back or alters its flavor.

Worcester Salt—without a trace of bitterness—brings out the full flavor. Its even texture and uniform grains make it the easiest salt to work into your butter.

WORCESTER SALT

The Salt with the Savor

Send us your dealer's name and address and we will mail you, free of charge, our booklet, "Butter Making on the Farm."

For farm and dairy use, Worcester Salt is put up in 14-pound cotton bags and 28 and 56-pound Irish linen bags. Good grocers everywhere sell Worcester Salt. Get a bag.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

CONDENSERIES OR CREAMERIES, WHICH?

We have been asked to make a comparison between the condensing factory and the creamery, viewing the matter from the standpoint of the milk producer. The inquiry in this case is accompanied by a statement of prices that have been paid by the company proposing to establish the condensery, during the last ten years. A comparison of these prices with Elgin values indicates a variation of from thirty-five cents to eighty cents per 100 pounds of milk in favor of the condensery. Of course, the condensery system takes the skim milk as well as the butter fat while in the case of the creamery the skim milk is retained for farm use. We would like to ask those of our subscribers who have had experience with condenseries or with creameries or with both to give their opinion on the relative merits of the two systems, assuming in each case that the company operating either the condensery or the creamery is absolutely reliable. We are willing to compensate those who will take the pains to discuss either side of this question somewhat in detail.

HANDLING SKIM MILK CALVES.

To the Editor of The Homestead:

Many farmers still are raising calves by allowing them to suck the cow, and while it must be admitted that no other method will prove quite so satisfactory in calf-development, the cheapness of skim milk as a ration for them readily commends itself to the thoughtful, intelligent farmer, since, with proper management, the skim milk calf will develop nicely and develop into a profitable animal.

We like to get the calf away from the cow and teach it to drink skim milk just as soon as possible after it is dropped. From three to five days is as long as it should be allowed to remain with her. This length of time must, of course, be controlled largely or even wholly, by circumstances. Where everything is normal, however, the above period of leaving the calf with the cow will be found about right for all concerned.

Don't make the mistake of separating the calf from the cow too soon after birth. The little fellow must get the benefit of the first milk (colostrum) for about the above period, as that is what starts its bowels and leaves them healthy and free.

Yet, there are other points to be observed in separating the calf from the cow. Some cows will not "give down" their milk if the calf is taken from them abruptly or within a short time after birth, and these members should be separated from the calf by slower degrees, in order to maintain a normal milk flow.

Another case that may require leaving the cow and calf together for a longer period of time on the start, is that of caked or highly inflamed udder. Nothing reduces the swelling and inflammation in such cases like the sucking of the calf, and it may be found necessary to leave it with the cow a while longer on this account.

After once taking the calf from the cow, let the separation be permanent and unbroken, as a second teaching to drink skim milk will prove much harder and more aggravating than the first, and tends to train the cow in holding up her milk. Besides, when the hand-fed calf gets with the cow again, the over-gorge of milk secured is sure to result in a bad case of the "scours."

Don't turn the calf back with the cow simply because it seems hard to teach to drink. That would spoil it. Just be patient with the little fellow, and remember that it is contrary to its nature for it to take nourishment by drinking from a vessel at this stage if its existence. Its natural way of securing sustenance is with its nose elevated, and pulling away at a teat; so gradually break him away from this method by allowing him to suck your finger, slowly working his head down till it reaches the milk in the pail. In this way, it soon secures a taste of the milk while sucking your finger. When it becomes accustomed to this,

A straight from the shoulder message to separator buyers

Beware of separator salesmen who claim that their machine is "just like the De Laval" or "as good as the De Laval."

Such claims are all absolutely false.

Such imitators juggle with words.

Instead of putting into their machine the experience and the workmanship and the material necessary to make a cream separator anything like as good as the De Laval, they find it cheaper and easier to "claim everything" and make a bugbear of "price" to keep the buyer from discovering the mechanical shortcomings of their machines.

They go on Barnum's theory that the people like to be fooled and don't care how they get your money just so long as they get it.

It is unfortunate that the separator business should be burdened with such unfair business methods but since it is it behooves every prospective separator buyer to use care and good judgment in the selection he makes.

Look well to the demonstrated ability of the concern that makes the machine to build a good separator. Avoid buying a machine whose makers have had little separator experience, or who are constantly changing from one makeshift type to another.

Talk with separator users who have learned by experience.

The more you investigate the more you will find that there is one and only one separator that stands in a class by itself.

It was the pioneer cream separator in 1878 and it has been first ever since.

You will find that more machines of this make are being sold than all other makes combined.

You will find that 98 per cent of the world's creameries use it exclusively.

You will find that every user of this machine is a booster.

You will find that its makers are so confident of its superiority that you may have a free trial of it alongside any other machine and judge for ourself as to which machine will serve you best.

This machine has over 1,500,000 satisfied users.

It will serve you best, save you most and last the longest.

If you want to be sure of making a good bargain buy a

the finger may be removed a little at a time, till the calf will drink without anything being in its mouth.

As to the amount of milk one should feed the calf, this must be gauged according to the size and vigor of the calf, frequency of feeding, richness of the milk, etc.

The safest plan is to note carefully about how much milk the calf sucked while running with the cow at will; then give just a little less than this quantity as a regular ration in hand-feeding.

We aim to feed the calf three times daily, when first taking it from the mother cow, and consider that a half-gallon of milk at a feed is quite sufficient for the average calf at the beginning, as over-feeding is to be carefully guarded against at this stage.

For the first two or three days, according to the general condition of the calf, we give it nothing but the pure, unseparated milk, just as it comes from the cow's udder. It is advisable to give each calf the milk from its own, individual mother at first, to avoid the possibility of bringing on bowel trouble, which might result if it drank the milk from another cow.

After two or three days, begin to add a little skim milk to the pure product, and at the end of a week or ten days, give the skim milk alone. A few days' more feeding, and a gallon of milk twice a day will do quite as well as feeding a smaller quantity three times a day. The quantity of milk given each day should be as nearly the same as possible, each calf drinking from an individual vessel. If all are fed together, some will get too much, while others will not secure enough to keep them in normal condition.

We keep some clean, small grain and bright roughage where the skim-milk calves can reach it at all times, and find that they are very quick to acquire the habit of picking up a little of each. Our calves begin to nibble at a little hay and eat a small quantity of grain by the time they are ten days or two weeks old when it is only a very short time till they are eating liberally of them. It is imperative that they do this, as clover, alfalfa, oats, bran, shorts and oil-meal will greatly assist in supplying the elements that were extracted from the whole milk by the cream separator.

The calves relish corn chop, but this feed is too strong for their digestive apparatus while they are young and tender, and should not be given till they are from four to six weeks old, when a handful may be added to the bran, oats and oil meal, that amount being gradually increased as the calves develop, till it is made about one-third of the entire ration. Oats, however, are the ideal feed for calves, and should constitute one-half their grain ration, a small proportion of it being bran or shorts, and a handful of oil meal being added occasionally, to act as a laxative and to keep the bowels in prime condition.

It is imperative that the skim-milk calves have clean quarters, plenty of open air exercise in the life-giving sunlight, and a grassy plot to run in. Have a lot expressly for them, where they may be turned during the day, and a good shelter for them, should the weather demand it. Cold, damp, dark or filthy quarters are sure to give the calves the "scours" or other kindred ailments, which quickly start the little fellows on the downward road. And if there is anything in stockdom worse than a half dozen run-down skim-milk calves, it is a dozen of them. They become "pot-bellied," long-haired and thin, coming out the following spring after being wintered, looking like the proverbial "thirty cents."

In this connection, it is imperative that the calves' vessels from which they drink be kept clean and sanitary. Use them for nothing else, and rinse them out well immediately after each feeding, scalding them thoroughly two or three times a week. A little neglect in this matter is productive of the most direful results. The pails so soon sour if not properly attended to, and disease germs breed and thrive in them during hot weather. It is probable that nine out of every ten cases of the "scours" are directly traceable to this source of filth. Also, have the milk as near blood or animal heat as possible when fed to the calves, and never, under any circumstances, give them sour or tainted milk. There is less loss and danger in letting them miss a feed entirely than there is in giving them sour milk.

With a nice, pleasant lot (as above mentioned) containing a good growth of grass, the calves soon begin to nibble at it, when the skim-milk ration can be gradually lessened until, at the end of three or four months, according to the thrift of the calves, it can be dispensed with entirely, the grain, roughage and grass being really better adapted to their wants than the milk with the rich cream removed, and more conducive to a healthy, vigorous development than it is. If the calves are intended for the dairy, there should be little deviation from the above feeding through the summer months, but if a part of them are fit only for veal, these should have the corn-chop portion of their rations increased accordingly, on account of its fattening qualities. Bear well in mind that you are laying the foundation for a grown animal; then feed and care for it in a manner that will furnish the proper material for that foundation.—M. C.

Of the loss of livestock last year, that among swine was the heaviest and hog cholera was probably the cause of 90 per cent of the loss, according to the department of agriculture. The monetary loss in swine the department places at approximately $66,417,000. The loss of cattle and sheep in the year was not so heavy as the year previous, while the losses of farm horses and mules were not quite 1 per cent greater than the preceding year. "Losses of swine from disease were unusually heavy," says the department, "being 110 per thousand, as compared with 89.2 the preceding year and 54.9, the average per thousand of the last ten years. The total loss was approximately 6,736,000 head."

More than one hundred million barrels of flour are ground annually in the mills of the United States.

HOLSTEIN CATTLE.

Pure-bred Registered
HOLSTEIN CATTLE

The Holstein breed now boasts of eleven 1,000-lb. cows—that is cows with a semi-official yearly records in excess of 857 lbs. of butter fat (equivalent to 1,000 lbs. of commercial butter).

Yet it is not so much on these great records as on the average ability of their cows that Holstein breeders base their claims for superiority.

27.3 quarts of milk per day and 16.65 lbs. of best commercial butter per week was the average yield of 5,074 pure-bred Holsteins (one-half being heifers) tested by experiment stations between May, 1911, and May, 1912.

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LAW QUESTIONS CONSIDERED.

MARRIAGE CEREMONY BY MINISTER.

Mr. G. H. P., Charleston, Iowa.—Can a minister of the gospel, who is a native of another country and has not been naturalized in this country legally perform the marriage ceremony in the United States?

Answer.—Any minister of the gospel, who has been ordained or licensed according to the usages of his denomination, is authorized by the law of Iowa to perform a marriage ceremony. It is not necessary that he be a native-born or naturalized citizen.

INHERITANCE TAX.

A Subscriber, Martinsburg, Iowa.—Concerning the inheritance tax of Iowa. (1) What portion of it goes to the state? (2) How much property is exempt from inheritance tax? (3) If certificates and notes are not in the name of a person when he dies, are they exempt from inheritance tax? (4) How can a person invest in government bonds?

Answer.—(1) All collateral inheritance taxes in Iowa are paid to the state treasurer for the use of the state. (2) When entire estate does not exceed $1,000, after deducting debts, it is exempt from inheritance tax. Also, when property passes to husband or wife, father or mother or lineal descendant, or adopted child or lineal descendants thereof, or to educational or religious societies, public libraries or public art galleries, or public hospitals, etc., it is exempt from the inheritance tax. (3) If the certificates and notes actually belong to a person, though made out in another's name, they are not exempt.

STORM WINDOW FIXTURES.

A Subscriber, Stanton, Iowa.—Last summer A bought a farm in Iowa from B and A was to take possession thereof on the first of March, 1913. Nothing was said at the time of sale about storm windows which B had used on a porch and bed room of the house. After A took possession of the property B came and demanded the right to take the storm windows away, claiming that they belonged to him. Is he correct?

Answer.—B's claim is not lawful The storm windows are fixtures to the house and go with it in the sale, nothing being said about them in the deal. B has no right to take them away.

RULE OF DESCENT IN INDIANA.

A Subscriber, Unionville, Mo.—I have an uncle living in Indiana who never married. He owns considerable property. He had a sister who died and left one child and two brothers who died and left one child each and another brother who died and left seven children. My uncle has no brother or sister living and his parents are dead. His property is to be equally divided among his heirs. What will be the lawful share of each child of his brothers and sister?

Answer.—The lawful heirs of your uncle are the children of his deceased sister and brothers. All of these children are equally of kin to your uncle, and therefore will share equally in his estate, under the laws of Indiana, provided he makes no will to the contrary.

WIDOW'S PORTION OF ESTATE.

A Subscriber, Lewis, Iowa.—My father died without making a will, leaving a wife and six children by a former wife. He had no children by the second wife. He owned at the time of his death 160 acres of land in Iowa and five lots in an Iowa town. My mother, his first wife, helped to earn all this property and my father had it when he married the second time. His widow wants to sell all of said property. Can she lawfully do so? What share of it legally belongs to her?

Answer.—The widow can sell only her own interest in the property which is one-third of it. An administrator should be appointed to settle the estate, and what is called the widow's allowance should first be set apart for the widow. After this is done and debts collected and paid, the estate is ready to be settled, and the widow is then entitled to one-third of the estate, which is hers absolutely, and she can do as she chooses with it. The other two-thirds of the estate belongs to the six children, share and share alike.

FIVE-YEAR LEASE—RENTER'S RIGHTS.

A Subscriber, Hartington, Neb.—I rented a farm from B for five years and there is more pasture land on it than I need. (1) Can I lawfully break up part of the pasture land and cultivate it in crops? (2) If I should do so could the owner of the land recover damages from me by law? Nothing was said in our contract about the pasture land.

Answer.—You have a right to cultivate part of the pasture land, and the owner could not recover damages from you for so doing.

SUBSCRIPTION TO PAPER—HOW ENDED.

A Subscriber, Donnellson, Iowa.—I ordered a paper from Pennsylvania about twenty-one years ago to be sent to me for one year. When the year expired the publisher kept on sending the paper to me and it has continued to come till the present time. Can the publisher compel me to pay for the paper?

Answer.—If you continued to take the paper from the postoffice, or from your R. F. D. box, without objection, the publisher can compel you to pay for it. When a paper or other publication continues to come to a subscriber after his time of subscription has expired and he wishes to stop it he should refuse to take it from the postoffice or take it there if it comes to his rural mail box and leave it, telling the postmaster that he refuses to receive the paper and to notify the

Put It In Your Pocket

What? The money which the wasted grain in your straw pile is worth.

How? By hiring a thresher which **beats out** all the grain just as you would do if you were separating by hand with a pitchfork.

There is only one such machine. All others wait for the grain to drop out.

The Red River Special **beats it out.** It saves all the grain, because it has the only true and correct method of **beating out** the grain.

The Big Cylinder, the "Man Behind the Gun," and the uplifting Shakers don't let any escape.

You worked hard to plant and harvest the crop. Don't let it be wasted.

Hire the Red River Special and put all the money in your pocket and none in the straw pile.

Robert Burnett and Henry Becker, farmers of Baldwin, Illinois, say, "our threshing did not cost us anything this year, because the Red River Special saved enough more grain to pay our thresh bills."

Hire the Red River Special and **save your thresh bill.**

Don't pay double toll.

It is the only machine that beats out the grain.

HORTICULTURE

LARGE OR SMALL POTATOES FOR SEED.

An experiment conducted in 1912 at the South Dakota station throws some light on the relative value of large and small potatoes when these are used for seed purposes. In this experiment all small and very irregular tubers were selected out of the total bulk of seed potatoes used in planting the patch. This left the larger, better formed tubers to be used in the lot called "large." All tubers in the original amount of seed were used for planting either for "large" or "small" seed so that there were no intermediate discarded tubers. The average weight of the large tubers was 5.7 ounces while the small potatoes weighed 3.1 ounces. In nearly all cases the potatoes were cut into four pieces, the exception being in the case of very small tubers which were cut only into halves. After cutting, the large seed pieces averaged 1.4 ounces in weight while the small seed pieces weighed .8 ounces. This seed was planted in alternate rows eighteen rows being used in all, the yield in each case being indicated in the following table:

Row	Yield lbs.	Bu. per a.
1 small seed	127	132.3
2 large seed	160	166.7
3 small seed	131	136.5
4 large seed	173	180.2
5 small seed	131	136.5
6 large seed	171	178.1
7 small seed	129	134.4
8 large seed	181	188.6
9 small seed	138	143.7
10 large seed	187	194.8
11 small seed	138	143.7
12 large seed	168	175.0
13 small seed	150	156.3
14 large seed	175	182.3
15 small seed—Not weighed.		
16 large seed	158	164.6
17 small seed	139	144.8
18 large seed	187	194.7

From the above figures it will be seen that in the case of all rows the weight of those planted with large seed without exception outyielded the rows next to them which were planted with small seed. The average yield of the rows planted with large seed was 180 bushels per acre while the small seed yielded an average of 141 bushels per acre. Here was an increase of 2 per cent in yield in favor of the large seed.

Observations taken from the crop indicated that the rows planted from large potatoes produced a more uniform crop and the growth was more rapid from the beginning. As potatoes are cheap this spring it would seem from this experiment that it will be a safe venture to use only select potatoes for seed.

IMPORTANT TO APPLE RAISERS.

A recent issue of that excellent little college publication, The Kansas Industrialist, contains some valuable information on the treatment of apple trees for the prevention of apple blotch. The article comes from the pen of Prof. D. E. Lewis, of the Kansas Agricultural College. The professor says that the disease mentioned causes immense loss to the orchardists annually, and that it is the most destructive disease known to Kansas. The article is as follows:

It is impossible to control blotch after it has gained entrance to the fruit. No blotch can be seen at the time of the first spraying, but if the spores are present on the twigs in cankers it means you will have blotch on the fruit unless it is sprayed. Blotch is not visible to the naked eye, for two or three weeks after it has entered the fruit.

The solution used in spraying for this fungous disease is Bordeaux mixture. This is made from three pounds of copper sulphate, four pounds of lime, and fifty gallons of water. It is important that all the copper sulphate be mixed with one-half of the water and all the lime with the other one-half, and these two dilute solutions allowed to run together at the same time into the tank. Bordeaux solution made in any other way is less effective and may be even injurious to the fruit.

The first application should be three weeks after the petals fall; the second, two weeks after the first; the third, in bad cases, will be required about four to six weeks after the petals fall, and the fourth, eight to ten weeks after the petals fall, or at the time of spraying for the second brood of the codling moth. In mild cases, the second application may be applied from three to four weeks after the first, and the third may be omitted. Bordeaux mixture must not be used during wet weather. If the weather is damp at the regular time of spraying, apply lime and sulphur and spray with Bordeaux as soon as the weather is settled.

The disease is caused by a fungous growth. It grows parasitically on the leaves, twigs, and fruit. On leaves it causes very small, almost white, or greenish-yellow, irregular spots. They have a dark speck or raised part in the center. The work on the leaves is not very important. It seldom causes defoliation, and no spores are given off. On the twigs the growth is small, elongated cankers, varying from one-fourth to one and one-half inches in length. Cankers have a light gray or tan center surrounded by dark green or olive margins. Spores are borne on the portions just inside the dark green elevations, in the spring, and are carried over the winter in the cankers.

The damage to the fruit varies with the variety, causing total loss on some kinds and almost no damage on other varieties in the same orchard. It causes a black, sunken, firm spot, with fringed or regular edge, or may cause a dark brown or almost black irregular spot. When two spots coalesce they frequently are crossed with cracks, caused by the growth of cells under the dead spots. Soft rots often get into these cracks and vary the appearance of the disease. Fruit often is made unsalable by apple blotch. It is a leatherly, drying disease and in the worst cases the apples are worthless, even for cider and vinegar.

Cutting the tree back often is helpful. This should be followed by spraying. Cankers may then be prevented from forming on new wood. They are always found on twigs and never on old limbs. A few varieties that are susceptible are Missouri Pippin, Ben Davis, White Winter, Pearmain, Huntsman's Favorite, Northwest Greening, Maiden Blush, Gano, Snow, and Arkansas Black. Those that are almost immune are Grimes Golden, York Imperial, Winesap, and, to a less extent, Jonathan.

SOME SPRAYING POINTS.

A Kansas subscriber writes as follows:

I intend to spray my orchard this spring, but have had no experience. How many pounds of arsenate of lead and slacked lime should I use to 100 gallons of water for spraying apple and peach trees?

We are glad to answer this letter and will aim to make clear a few important points. A great deal of matter has been published during the past few years about spraying, and yet the whole business is so complicated that it is imperfectly understood, even by those who need to master its details.

There are different sprays for different purposes. The Bordeaux mixture (copper sulphate five pounds, fresh lime five pounds to fifty gallons of water) is a fungicide, and will have no effect upon insects. For convenience it is customary to add to this a poison for insects, say ten ounces of sugar of lead or five ounces of arsenate. This is the spray in common use for apples, plums and pears.

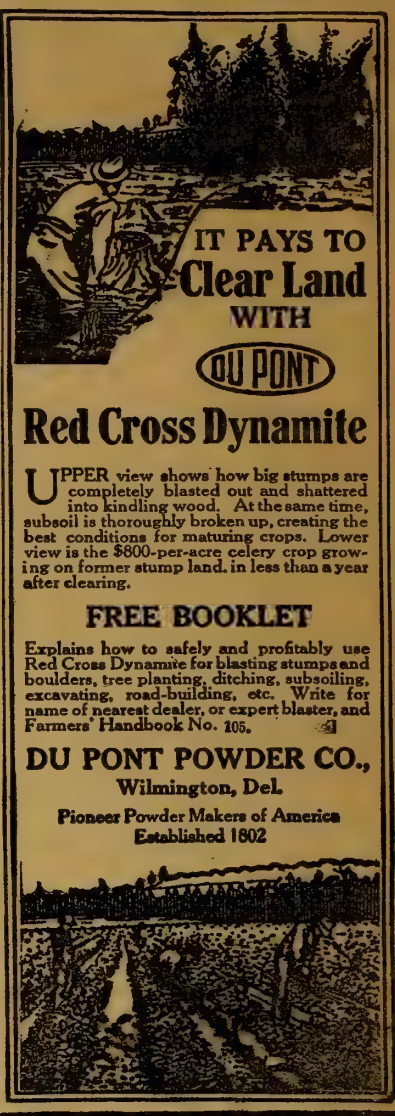
But you will need a weaker mixture for peaches using the same amount of water, but only half as much copper sulphate and lime. Do this because the peach foliage is injured by the full-strength Bordeaux.

Another spray very much used now is the lime-sulphur wash. This may be bought all mixed for use except that it has to be diluted. This is used both as a fungicide and as a remedy for the scale. But the lime-sulphur spray is used exclusively as a winter application. Perhaps we should not say exclusively, but at least very generally. In preparing these sprays great care must be used in getting just the right quantity of materials, and if a man has had actually no experience he had better get an experienced man, if possible, to help on his first attempt.

There is also much certainty in the public mind as to the proper time to spray. And yet, a general rule for spraying may be given in one sentence which ought to be committed to memory by every fruit grower. Use the lime-sulphur in late fall and winter for scale and fungicides and poisons from April first to July.

An article like this can only give in the briefest outline instructions for spraying. There are many subordinate points which ought to be understood for the best results. Each kind of fruit has its special requirements.

To illustrate: apples and pears should have the dose just as the buds



TESTED SEED CORN

Guaranteed To Satisfy Or Your Money Back.

EVERY ear of our corn is tested for germination and we ship it in the ear, in the crate, so you can see just what it is. Our corn is adapted to your locality, no matter what part of the corn belt. Our growers are among the leading prize-winning exhibitors at the best corn shows, and our seed is especially selected and tested. Our price is extremely low when you consider that it only costs you less than 80c per acre for this specially selected and thoroughly tested seed. Tell us whether you want the Yellow Dent or the White Dent and we will guarantee the seed we send you will entirely satisfy or your money back. Price, shipped in the ear, in bushel crates, seed tested, $5 per bushel. A bushel will plant six to seven acres. Can you make a better investment? Order today. Address

300 BEST VARIETIES Strawberry plant $1.50, express paid fall-bearing straw berries, doz. $1.25. 25 black rasp., never winter kill $1.00. **W. H. Kooll, Box 710, Hampton, Ia.**

open in the spring and just after the petals fall. Also plums and cherries when the buds are in the same state, and peaches (bearing in mind the weaker strength) just before the flower buds open. Grapes should have an application of the Bordeaux when the new growth is out about six inches, and again after blooming. This will control the mildew and black rot.

But currants and gooseberries need the poison only after the worms are to be seen, when they are ready to eat. Then you must feed them. The same with spraying strawberries with poisons for the leaf roller, but the Bordeaux for rust may be applied as soon as leaves appear. There is another thing which should be said to every one who is taking up spraying for the first time: Get informed as well as possible upon the details of the business. Every state has its experiment station in connection with its agricultural college. At this station they publish bulletins giving all requisite information upon spraying.

This Kansas subscriber should write at once to Manhattan and ask for the spraying bulletins. They will be sent free. Get your name upon their mailing list and they will be glad to send you, from time to time, their helpful publications.

GARDEN BEANS.

The beans most commonly grown in the home garden are of the low bush type, which can be planted quite closely together as they have no tendency to make vines or runners.

The best-known type of the bush beans are the green-podded and wax-podded or butter varieties which are used for snap-shorts, that is, the pods are used while young and tender. During recent years great improvements have been made in this type as varieties have been developed which produce pods that are absolutely free from strings and tough fiber. For the convenience of those who are not well acquainted with the newer varieties a list of the best varieties is given below: Burpee's Stringless Green Pod is unequaled as a green podded variety; it produces long stringless green pods which are much better in quality than Six Weeks or Early Mohawk and the pods are ready for use fully as early as any other variety.

Probably the earliest wax or butter variety is Brittle Wax; other excellent sorts are Fairfield Wonder Wax, New Kidney Wax, Rust-proof Wax and Pencil Pod Black Wax.

There is an old saying that land that is too poor to grow any other crop may be planted to beans; however, this is not the case, as in order to raise a good crop of beans the ground can hardly be made too rich. Beans are very tender and for this reason planting should be delayed until the ground is quite warm and danger from frost is past.

Plant the rows eighteen inches apart either planting about three seeds in a hill one foot apart or-naving in drills one plant every six inches. Start to hoe or cultivate as soon as the plants are up and give frequent but shallow cultivations until the blossoms appear; after that the plants should not be disturbed as the blossoms are easily knocked off and as a result the crop will be greatly decreased.

Never work among your beans while the vines are wet from rain or dew as it will cause them to rust.

An important feature in growing beans is to make continued plantings so as to have a constant supply of fresh tender pods throughout the season.

Keep the pods picked as fast as they are ready for use as the bearing season will then be greatly prolonged.

A Farmers', Rural School-teacher and Homemakers' Conference was held recently at the Stevens Point, Wisconsin, State Normal School. Closer co-operation between the school and its patrons and increased service to the community was the theme. Pres. John F. Sims of the normal school feels that this conference is a new departure not only in the normal school work, but in educational movements in general. The program of the conference was prepared with the thought that the people of the rural communities might inform the normal school of their conditions and needs in order that the school might be of greater service to them in as many helpful ways as possible. Many of the farmers who attended told briefly of their appreciation of the practical value of the conference and expressed the hope that it would be made a permanent activity of the school. Steps toward the formation of an agricultural club were taken to include all who are interested in the betterment of rural conditions.

A female fly will deposit 150 eggs at a laying. In warm weather these eggs hatch in eight hours. In ten days they are able-bodied flies ready to lay more eggs.

"Farmers' Pride"

A General Purpose Saddle That Fills Every Need. Special Price for March and April **$9.67**

Seldom is an opportunity offered to buy a good saddle at a low price, and never has so fine a saddle as our "Farmers' Pride" been offered at anywhere near the price we are quoting. Just another example of Sears, Roebuck and Co.'s policy of distributing dependable merchandise at prices based on production cost plus one profit.

This is the way we make it:

TREE—13½-inch, Morgan style, steel fork and horn; sheepskin covered bars, making the saddle easy on the horse's back.
SKIRTS—21 inches long.
RIGGING—Double cinch rigged, with 1-inch tie straps to tie; 4-inch soft hair cinches.
SEAT—Half leather covered, roll cantle.
STIRRUP STRAPS—1½ inches wide, full length, to buckle; fenders, 6½ inches wide, 13½ inches long, attached; 3-inch Texas bolt stirrups.
Weight of saddle, about 13 pounds; packed for shipment, about 20 pounds.

No. 10W3513021/4 Price.....$9.67

Send us an order for either or both of these items and we will ship promptly. Your money back if you are not pleased. Take advantage of these low prices now, as hides are scarce and leather is steadily advancing in price. This is an opportunity that will not be presented again. Our complete line of exceptional values in harness, saddlery and accessories is shown in our beautifully illustrated 80-page Special Harness Catalog. Write "Harness" on a postal card, sign your name and address and we will mail you this catalog postpaid. Act now and send us an order and save money.

Our "Mansfield" Farm Harness is still another money saving bargain in a strong, serviceable double farm harness worth almost twice the price we ask for it. Following are the specifications:

BRIDLES—⅞-inch short cheeks, round side reins, sensible blinds, nickel spots.
LINES—1⅛ inches wide, 18 feet long.
HAMES—Wood, iron bound, square staple; Moeller hame tugs, jointed Concord clip attachments; 1½-inch breast straps and martingales, with collar straps.
TRACES—1¾ inches wide, Moeller clip cockeyes.
TRIMMINGS—XC buckles.
Weight, packed for shipment, about 80 pounds.
No. 10W35567¼ Price, without collars..... $32.79

PADS—Flat harness leather, felt lined; drop hooks and terrets; nickel spots; folded bellybands; 1⅛-inch hip and back straps; scalloped safes, cruppers buckled on; Cooper's trace carriers, nickel spotted on outside.

A BARGAIN ONLY $32.79

We guarantee this saddle or harness to give you satisfactory service.

Don't Have a Blind One

"VISIO"

An Absolute Cure for Moon Blindness

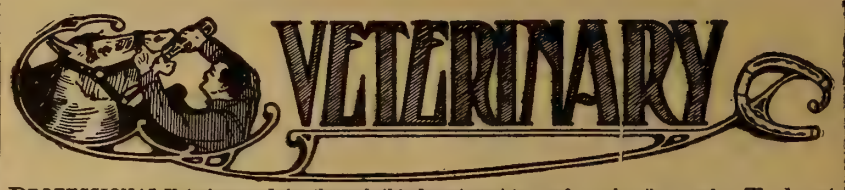
(Opthalmia), Cataract and Conjunctivitis

Shying horses all suffer from diseased eyes.

"Visio" will convince any horse owner that it will absolutely cure defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO" under our GUARANTEE to refund money if it does not cure.

$2.00 per bottle, postpaid on receipt of price.

VISIO Remedy Ass'n, 2458 Calumet Ave., Chicago, Ill.



PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

SCOURS.

My calves are troubled with red scours. It attacks them from a week old up to two months of age. My buildings are kept clean and I am careful how I feed them. I always let my calves run with the cow until they are two weeks old, then I feed them on whole milk right from the cow for another week, the next week I give them one-half skim milk and one-half whole milk, so by the time they are one month old they are on all skim milk and eating good, bright clean oat hay. I have given them all the remedies I know of trying one part solid and two parts subnitrate of bismuth, also raw eggs with laudanum and several others. I shall be thankful for any advice.

The remedies referred to will do no good unless you first give a full dose of castor oil shaken up in milk. Mix together half an ounce of formaldehyde and fifteen and one-half ounces distilled water. Of this mix one teaspoonful in each pint of milk fed to the calves. Lessen the rich feed of cows. To prevent calf cholera of newborn calves hypodermic injections of polyvalent bacteria against dysentery should be given at birth. It may be ordered through the druggist.

DISEASED TAIL.

Have a five-year-old mare that is fat and looking well, but is losing the hair on her tail. She had a white scab or thick dandruff on her tail when first noticed and I have kept this washed clean. The hair breaks off about an inch from the tail and the scabs and roots are hard and stiff, almost like wire.

Scrub the parts clean and when dry rub in a mixture of equal parts of kerosene and machine oil. Wind locks of the upstanding hair around the fingers and pull until the skin gives with a cracking sound. Do this with all the affected hair. It often stops tail rubbing. Repeat the application of oil and kerosene as often as found necessary. See that the mare is worked every day and that she is not too heavily fed. Do not feed corn in spring and summer.

BARRENNESS.

Please give me some remedy for barren sows. The sows are in good shape, but not too fat and have plenty of exercise.

There is no specific remedy for barrenness. The causes are many and different and no one remedy will cure all conditions. As a rule it is best to let barren sows go to the butcher.

VICIOUS MARE.

A mare four years old had a colt April 11th, but she does not want to own it. She kicks and bites it and will not let it nurse. What can I do with her?

Try penning the mare against the wall of the box stall, by means of a gate or hurdle through the bars of which the foal may be liable to suck. She may have to be hobbled to prevent kicking. In such cases, however, it usually is best to wean and hand-raise the foal. Do not have this mare bred again.

LAMENESS.

(1) My sorrel mare coming three years old and weighing 1000 pounds cut her foot last September. Although we have used almost everything on it, including liniment and poultices, her foot is swollen above the hoof and she is lame. We have fed her hay, fodder, corn and oats. (2) Is there any cure for cock ankle in horses? We have a bay mare that has been in this condition for about ten months.

Clip off the hair and blister the hoof head with cerate of cantharides. Rub it in for fifteen minutes, then tie mare up short in stall so that she will not be able to lie down. Wash blister off in forty-eight hours and then apply a little lard daily. (2) A veterinarian could cut the tendons and in that way cure cocked ankle. There is no other cure.

SOWS EATING PIGS.

Some of my sows start to eat their pigs after they are about a week or two old. These sows have been fed ground oats and corn, also milk and swill shorts together with oil meal. They have a nice, clean place and are in good shape. What can I do for them?

The sows appear to have been overfed during pregnancy and so have become fat, sluggish, constipated and cross. Always make pregnant sows take abundant exercise every day during pregnancy and feed light, laxative rations, omitting corn and including silage or roots, and alfalfa hay. Turn the sows out at once and greatly reduce the rations; make creeps for the pigs, so that the sows cannot lie on them.

PARALYSIS.

I have six young Duroc sows that have eight or nine pigs apiece about three weeks old. About a week ago three sows began to go lame in their hind legs, were lame for a day or two and then they seemed to get stiff all over and now one of them is down and cannot get up. Another one gets down and has to be helped up and still another is lame just as these two started. They have no swelling, but when I help them up it seems to hurt them. They have been fed equal parts of oats and corn ground and made into slop, with very little ear corn, and a sprinkle of oil meal and some alfalfa meal. This was fed before farrowing and after the same way. They have good, dry sleeping quarters.

This trouble is wholly due to overfeeding and underexercising the sows during pregnancy. They should have had light, laxative slop and no corn, while roots or silage and alfalfa hay round out a suitable ration. Wean the pigs at once and put the sows onto a ration of light slop and lime water.

LAME SOW.

A sow has been lame in her hind feet for about five or six weeks and seems to get worse all the time. She seems to be in misery every time she tries to get up and when she does get up and walks she crosses her hind feet, walks a few steps and then the hind feet seem to give away. She has been in a stable partly floor and partly dirt and sometimes she would lie on the dirt part even in wet weather. She weighs between 250 and 300 pounds and is about two years old.

See answer under head of "paralysis" in this issue. The condition is due to causes there mentioned.

DISEASED BONE.

I have a roan mare about twelve years old. About nine months ago I noticed a swelling or enlargement, almost as large as my hand under her left eye, and it seemed difficult for her to breathe and when pulling she would snore and puff. I took her to a veterinary and he found that she had a back tooth so badly decayed that he had to trephine to remove it. This was done seven or eight months ago, and the hole has never entirely healed. It discharges a thick yellow matter that is very offensive through both the opening and her left nostril. I have used several kinds of medicine from the local veterinarian, but with no improvement. At present am using peroxide of hydrogen which cleanses it thoroughly, but in eight or ten hours it is as bad as ever.

Diseased bone is present and the part should again be trephined and the bone and pus removed. Afterward flush out once daily with a lukewarm 1 per cent solution of permanganate

Save Your Hogs!

As a hog conditioner—as a preventive against Cholera—or for destroying worms in hogs, take a tip from one of the best known stockmen in the Northwest and feed

Lewis' Lye

The Standard for Half a Century

A quarter of a can to every barrel of slop, or a teaspoonful to five gallons is sufficient, and may be the means of saving you hundreds of dollars in hog profits this very year.

of potash and then plug the hole with oakum to keep it from closing too quickly.

THAT NEW STALLION LAW.

To the Editor of The Homestead:

In one of your recent issues I noticed a criticism on the recent amendment to the Iowa stallion law and I most heartily endorse Mr. Smith's criticism. In the first place it is a slap in the face of every honest man who owns a stallion. The law as it was required him to make oath that his horse was free from disease or blemish and that said stallion was free from hereditary, infectious, contagious or transmissible diseases, but this, it seems, is not deemed sufficient; a veterinarian must look him over, simply look wise and professional and collect his fee. And not only that, but each year thereafter during the active service of said stallion he must pass inspection for which the state receives $1 and the veterinarian whatever fee he sees fit to collect. Talk about graft, what do you call that?

In the first place, what man owning a stallion would dare to go before a notary and perjure himself, running the risk of a heavy fine or imprisonment? I have a standard-bred stallion and we have been together every day for nearly nine years. He has been examined by veterinarians I think about three times. In March I signed up, went before a notary, made the oath that I supposed was required by law and sent in my $1. In a few days back came everything but the dollar with the notice that the law required a veterinary's signature. This was the first time my oath could not be taken. Of course, the case is very grave; a sound or unsound stud horse against a fine of $100 or thirty days in jail.

Warren county, Ia. P. C. Stire.

SEPARATING THE SEXES.

A subscriber from Tama county, Iowa, submits the following inquiry in regard to his ducks:

I have two breeds of ducks, the Tame Mallards and Indian Runners. These ducks and drakes have been mating together and I desire to set only pure strain eggs. How long after I separate the two breeds before I can set the eggs, knowing they will not hatch mixed breeds? My Runners have been laying since in January and I now desire to separate the breeds.

This is a question which no one can answer, positively. Generally speaking, it depends largely on how long the duck has been laying after the last fertilization, how nearly through she is in producing the present clutch of eggs, and knowing this, it would be difficult to say just how long the effect of the copulation exists.

According to the Maryland Experiment Station, hens that were yarded without males produced seven fertile eggs out of ten laid the fourth day after a cockerel was added to the yard. In another pen four eggs were laid on the seventh day and all were fertile. In another test, eight eggs were laid on the eighth day and all were fertile. From ten days to two weeks would seem wholly safe where the females had not been mated.

When the females are bred it is a complicated affair. The eggs might be all right in a couple of weeks, possibly in less time, and again these ducks might throw off colored ducklings well up into the summer. There are instances where a hen laid, hatched and weaned her chicks, stole her nest and hatched another brood, that had no resemblance whatever to the common flock with which she had run, but was the exact counterpart of her first brood sired by a cock of her own breed. One year we kept an immense farm flock to produce infertile eggs. Late in the summer a biddy was found sitting, supposedly on spoiled eggs dumped into a ditch. They were well advanced in incubation and the range cockerels had all been disposed of early in April. These, of course, are isolated cases.

As those ducks are laying regularly it is practically safe to assume that the effect of the present mating would disappear within two weeks. If any one of them is not laying and copulation has taken place, then is the above all to the bad.

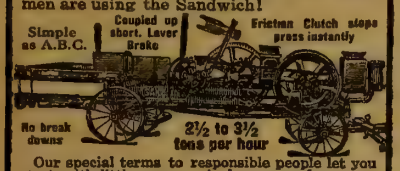
A good plan is to separate the breeds, and keep the females isolated for about ten days, then add the males to the yards. For the most part it will be a safe proceeding. If using for home incubation, good and well. A mixed youngster could be quickly detected. But if we ship eggs for hatching and even one cross would crop out, then are we in for it.

This indiscriminate mating is to be deplored from another standpoint as well. All animals, including fowls, have their favorites. It is well if this sort of thing does not occur until the pens are yarded, because many times a fowl both male and female positively refuses to accept another mate when once his choice is made.

Undoubtedly the tastes of a community have much to do in the establishment of prices. For instance, in New York the price per hundred pounds for cabbage was given at twenty-four cents. In Alabama $3.30 per hundred was the figure.

SANDWICH
(solid steel—money maker)
Motor Press

Puts you—or your boys—in the big paying, fast growing business of baling hay! "Net profit $18 to $22 per day," write Swartz & Mensch, Dixon, Ill. Other hustlers making $200 to $300 net profits monthly. And these men are using the Sandwich!



Our special terms to responsible people let you start with little money. And you pay from your profits. Unless we know the Sandwich will make you stacks of ready cash, we could not sell this way.

Gas Engine on Same Truck

Here's the most complete hay baling outfit in existence. Full power is driven from engine to press by heavy steel roller chain. It does away with slipping belts. The Gas Engine is the best quality—hopper cooled type—gear driven magneto—4, 6, 8, and 10-horse power.

The Sandwich has a simple time-tried self feeder and a big feed opening. A great windrow baler. Beats every ordinary press from 2 to 8 tons daily. 25 tons are an everyday job for the Sandwich; often 30 to 40.

This Book FREE

Tell Me How Many Head of Stock You Have

and I'll feed them 60 days before you pay. I'll show you how to make your farm animals grow faster—thrive better—put on more flesh on no more feed—make you more money.

I'll Rid Them of Worms or No Pay

I'll drive out the blood-sucking, life-sapping, disease-breeding parasites, which multiply in the stomach and intestines, killing off your hogs and sheep, starving our horses and cattle, and stealing your feed and profit. I'll send you enough Sal-Vet to last all your stock 60 days. Simply put it where all your farm animals can run to it freely. They will doctor themselves. Don't send any money—just the coupon. Fill it out and mail today.

Sidney R. Feil, Pres.

What SAL-VET is and Does

Sal-Vet is a wonder-working medicated salt which completely rids farm animals of their greatest enemies—the stomach and intestinal worms. These deadly pests are the cause of 90% of all live-stock diseases. They keep farm stock in a poor, weakened, money-losing condition—they are the first step to hog cholera, swine plague, horse plague and other contagious diseases.

How SAL-VET Prevents Diseases

Sal-Vet prevents heavy losses when disease breaks out in your neighborhood because it kills and expels these deadly, life-sapping pests and puts every animal on your farm in a healthy, vigorous, worm-free condition—enabling them to better resist these deadly plagues. It sharpens the appetite, improves digestion and makes all stock grow into profit fast because it helps them get the good of all their food. Being a salt, animals like it and run to it freely—and

They Doctor Themselves

It requires no mixing—no drenching—no dosing—no trouble at all. A number of leading agricultural colleges and all prominent live-stock authorities endorse it.

Let me send you a 60-day supply without a penny of pay in advance.

Send No Money—Just the Coupon

Fill out the coupon, tell me how many head of stock you have, and mail it to me today. I'll ship you enough Sal-Vet to last all your stock 60 days. You simply pay the freight charges when it arrives and at the end of 60 days report results. If Sal-Vet does not do what I claim you won't owe me a penny. Send the coupon NOW. Address

Proof That Proves from Actual Users

"Sal-Vet has been of great service to us; it has kept our hogs and pigs free from worms and, in addition, proved to be a splendid tonic.—J. B. ESPY, Agriculturist, Southeast Alabama Experiment Station, Abbeville, Ala.

"For their own good, I would recommend Sal-Vet to all sheep men. It will destroy every stomach worm in the flock and keep your sheep and lambs free from them and at the same time keep the flock in the pink of condition and health."—ROBERT S. BLASTOCK, Mgr. Sheep Dept., Walnut Hall Stock Farm Donerail, Ky.

"I cannot find words to express how much I think of Sal-Vet. Hogs all around my place had cholera, but I did not lose a single one of mine, and all winter they continued to look just fine." WM. CAMPBELL, Route No. 10, Decatur, Ind.

"Before getting your Sal-Vet I had lost thirteen of my best hogs, but since feeding Sal-Vet I did not lose a single one, and every animal is in fine condition."—(*Signed*) GEO. MOREN, Route No. 1, Pittsburgh, Kansas.

"I have given Sal-Vet a thorough trial with most gratifying results. My herd of pure bred Berkshires contracted a bad cough and continually got worse, until I gave your Sal-Vet to them. After two weeks of this treatment, not a hog was coughing, and all are as sleek as moles."—E. DANA SUTCLIFF, Shickshinny, Pa.

PRICES 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 500 lbs., $21.12. No orders filled for less than 40 lbs. on this 60 day trial offer. Never sold in bulk; only in Trade-Marked Sal-Vet packages.

60-day trial shipments are based on 1 lb. of Sal-Vet for each hog or sheep and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular packages.

SIDNEY R. FEIL, Pres.
THE S. R. FEIL CO.
Dept. 1H 5-1-13 Cleveland, O.

Ship me enough Sal-Vet to last my stock 60 days. I will pay the freight charges when it arrives, report results in 60 days and will then pay for it if it does what you claim. If it does not you are to cancel the charges.

BOUNDARY LINE—ADVERSE POSSESSION.

An Iowa Subscriber.—A bought land adjoining B's farm and discovered that the partition fence was not on the true line, but over on the land he had bought. A wants the fence moved to the true line, but B claims it has stood where it is for twenty years and is therefore the line according to law. Can A compel B to move the fence on the true line?

Answer.—If the owners of the two tracts of land, have recognized the fence as the division line for more than ten years, and each owner has occupied his land up to said fence without objection or claim that the fence was not on the true line, then the fence marks the lawful line, and it cannot be changed. This is based upon what is called "adverse possession." But if the line has been in dispute, and the fence has not been recognized as the true line, then the only way it can be changed would be by a suit brought in the district court for that purpose, and in such case the fence could not be moved without having the true line fixed by legal proceedings in court.

LAWFUL FENCE—NEBRASKA.

A Subscriber, Verdigris, Neb.—I own 160 acres of land fenced with a three-wire fence. All neighbors who own lands adjoining mine have their lands fenced. I want to change my portion of the partition fences to a woven wire fence, say thirty inches, using the three wires to make it hog tight. Can I compel my neighbors to make their portions of the partition fence hog tight?

Answer.—You cannot, The kind of fences declared to be lawful by the law of Nebraska, are not necessarily hog tight. A person may construct a perfectly lawful fence in Nebraska, without it being hog tight. All you can do is to compel your neighbors to make their portions lawful, and it may be either a six-rail fence with stakes and riders, of a three-board fence with posts eight feet apart, or a three-rail fence with posts ten feet apart, or a four-pole fence with posts seven feet apart, or a four-wire fence with posts one rod apart and stays between or a "Warner's patent."

REPAIR OF FENCES—TIGHT FENCES.

An Iowa Subscriber.—A and B own adjoining land. There is a partition fence between their lands in good repair, but A intends to put a lawful woven wire fence on his part of the line and may try to compel B to do likewise. B's land is occupied by a tenant under a lease which provides that the tenant shall haul material and repair fences. In case A compels B to make his part of the fence tight with woven wire, can B compel his tenant to haul materials and construct B's part of the fence?

Answer.—The construction of a lawful tight woven wire fence, where a non-tight fence is located, is not in the nature of repairing fences, but is practically making a new fence, or a fence of a different kind, and under the lease mentioned, the tenant is only required to haul materials and repair fences. He is not required to haul materials and construct the woven wire fence.

SHEEP—DOGS—DOMESTIC ANIMAL FUND.

"Shepherd," Maquoketa, Iowa.—One night recently my neighbor's dogs got among my flock of sheep and killed five and injured others, two of which have since died, and caused some ewes to lose their lambs. (1) Has the county any funds with which to pay me damages? (2) How much does the law allow for a ewe with lamb? (3) The dogs keep coming on my premises to eat the dead sheep, and chase the live ones. What can I do with them?

Answer.—(1) Such damages as you have suffered are paid by the county out of what is called the domestic animal fund, which is made up from taxes collected on dogs. We presume your county has such a fund on hand, sufficient to pay such damages. The treasurer of your county could tell you exactly the amount on hand. (2) The board of supervisors may allow to a person whose sheep have been destroyed or injured, damages not to exceed 90 per cent of his loss. (3) You may lawfully kill the dogs when you find them chasing your sheep or other animals.

DEED TO HUSBAND AND WIFE.

An Iowa Subscriber.—Where a husband and wife own real estate the deed being a joint deed to both of them and one of them dies, can the other sell or handle the property, in case the deceased one left heirs?

Answer.—The law in Iowa provides that when a deed is made to two persons they become tenants in common unless it be expressly stated otherwise in the deed. The rule applies to a deed to husband and wife. Where a deed of land is made to husband and wife naming them as grantees and there is no clause in it providing for survivorship, or joint tenancy, each one thereby becomes the owner of an undivided one-half of the land, and when one dies, the other does not inherit all, but only one-third of the deceased one's half, if there be children, or half of deceased person's half if there be no children, and the heirs of the deceased person would get the other part of his or her half.

Ask your neighbor to subscribe for The Homestead.

Telephone for a K-R-I-T

We will tell you who and where your nearest K-r-i-t dealer is. He will bring a K-r-i-t out to your farm. He will tell you what four thousand K-r-i-t-Farmers say of their K-r-i-t-s; why they bought their K-r-i-t-s; what they have done and can do with their K-r-i-t-s. He will tell you why you should be a K-r-i-t-Farmer. He will tell you of the three Cardinal Points of K-r-i-t Dominance—

The K-r-i-t Motor
The K-r-i-t Axle
The K-r-i-t Transmission

The K-r-i-t Transmission is the selective type of sliding gear, supported on annular ball bearings. The transmission gears are forged from chrome nickel steel, case hardened and cut to perfect mesh, insuring practically noiseless operation. The transmission drive shaft is made of specially heat treated chrome vanadium steel ground to size.

Those are some of the reasons why the K-r-i-t Transmission is so durable that it is practically wear-proof.

The transmission is the muscles, the nerves of your car. The transmission applies the power of the motor and the brains of the driver to the wheels.

Like the K-r-i-t Motor, like the K-r-i-t Axle, like the whole K-r-i-t Car, the K-r-i-t Transmission is designed and built for the K-r-i-t Farmer. Let us give you the names and addresses of Four Thousand K-r-i-t Farmers. Your county—wherever it is—has scores of them. Ask them why they are K-r-i-t Farmers. Then ask yourself why you are not.

Write us and we will bring the K-r-i-t out to your Farm.

THE HOME

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Postoffice Box 639, Aurora, Missouri.

WITH THE EDITOR.

Although it will be some considerable time before the new scientific training to make housewives more efficient becomes anything like general it is interesting to note the progress being made in this direction. Work being done at the Mechanics' Institute in Rochester, N. Y., where practical courses are being given in household physics and chemistry, suggest the lines along which, it is to be hoped, future housewives will some sweet day receive general training.

As the majority of students at the Mechanics' Institute are from city homes supplied with city water, heated by furnace or steam or hot water, are lighted by gas or electricity and operated by the help of gas range, fireless cooker, vacuum cleaner and other modern appliances for domestic efficiency, many of the problems presented to the students for consideration do not confront the housewife in an ordinary country home. Others, such as ventilation, the nature and sources of heat and its transmission for the purposes of warmth or the preparation of food, the adulteration of foods and how to test foods, the purity of water and similar things, do. The main point for consideration is that systematic, definite effort is being made to make women intelligent, efficient housekeepers who will be masters of their business even as the husband is of his.

The comfort, health and happiness of the home are very largely in the hands of its mistress. Social workers in the crowded sections of our cities declare that much drunkenness and wife desertion are due to the fact that women do not know how to keep a house and cook food. Another point to be remembered is that modern life makes such demands upon the energy, strength and health that unless a family is wisely fed its members do not have a fair chance in the battle for subsistence. Still another is that until housekeeping is made a profession for which its members receive something like training housework will continue to be despised as a menial occupation. Every well wisher of humanity should be thankful for every forward step taken in the direction of practical training for future homemakers.

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

Ah, heart of mine, dost sit and sigh
And of weary days complain?
But sweet and clear from the maples near
The robins sing in the rain.
—Sarah L. Arnold.

Joy comes, grief goes, we know not how;
Everything is happy now,
Everything is upward striving.
—J. R. Lowell.

Then sing, ye birds, sing a joyous song!
And let the young lambs bound
As to the tabor's sound!
We in thought will join your throng,
Ye that pipe and ye that play,
Ye that through your hearts today
Feel the gladness of the May.
—William Wordsworth.

MONEY NOT NEEDED.

There are a great many lovely trees, shrubs and flowers in our woods and fields that transplant well, and add beauty to the home grounds, and it is a great pleasure in the spring days to go out after them. We should never let the delight of spring slip away from us if by any means we may catch it as it passes. All seasons are good, but there is nothing quite like the spring.

TRY FRESH AIR.

When you feel that "flying to pieces" inclination overtaking you, jerk yourself to order with the check rein of determination and then, if you cannot regain self-control, stop anything on earth you may be doing and go out of doors. If you cannot leave the home, lean out of a window, or step for a little while on a porch. You will not lose any time—you will, in fact, gain time by increasing efficiency in whatever you may be doing. Sleep also is a great restorer of nerves to a normal tone, and sleeping with all windows open secures for us two nerve cures at the same time. In foods, raw onions, carrots, lettuce and celery, with plenty of olive oil, are excellent nerve foods, all valuable as aids in the good work, but the chief remedy is strong will and the compelling of your body to obey your mind.

PIEPLANT IN MANY WAYS.

The agreeable acid of this, our first spring fruit, provides a wholesome appetizer after the heavy diet of winter. Pieplant may be served in a great variety of ways, thus avoiding any sameness in the bill of fare even when the same articles serve as the foundation for the various dishes.

Pieplant Custard Pie.—One cupful of stewed pieplant, one-half cup of sugar, two well-beaten eggs, two tablespoons of cornstarch dissolved in three-fourths cup of milk, mix well and bake under crust only. The white of one egg may be reserved if liked, and beaten stiff with a spoon of sugar for a meringue.

Pieplant and Raisin Pie.—For two pies take one cup of chopped pieplant, one cup of chopped seeded raisins, one cup of granulated sugar, butter the size of an egg, the juice of one lemon, and one well-beaten egg. Bake in two crusts. Canned pieplant may be used when the fresh is not to be had.

Pieplant Gelatin.—Soak three tablespoons of gelatin in cold water, boil one pound of pieplant in about half a cup of hot water. Add one and one-fourth cups of sugar to the gelatin, remove the pieplant from the stove and strain. Put back, add the gelatin and set away to cool. Serve with whipped cream.

AMONG OURSELVES.

Several inquiries have been made with regard to labor-saving appliances mentioned by the prize-winners in our recent contest on Household Conveniences. It is not the policy of the Home Department to recommend any article by name. If the friends become interested in a vacuum cleaner or a gasoline iron we are pleased that it should be so, but we cannot recommend any special iron—that would be to make Among Ourselves an advertising medium, which it may not be.

Mrs. E. J. H. Bedford, whose visit last week gave us so much pleasure, will talk to us again today—she said only half her say and we want to hear the rest of it:

At this time of year from my eastern bedroom window we get the full glory of the surprise, as we have an unobstructed view, away and away off. There has always been more of interest to me in a sunrise than in a sunset. There is so much of gladsomeness in the thought of a new day, with its new hopes and aspirations; a sunset speaks of the closing of the books, of failures, perhaps, and sadness. This preference is expressed, perhaps, in these lines that suggest themselves to me:

When blithe young Morning, with face all aglow,
Peering over the hills, her glad presence brings,
All nature awake to her gentle call, sings
Of the Maker and Keeper of all below,
The mantle of darkness is carried away;
The earth with new radiance is once again blest;
The wandering moon sinks away in the West;
All nature proclaims the birth of a day.

Then again one summer evening as I was washing the supper dishes and the shadows were beginning to gather, I looked out across the meadows from the open door. I was almost startled by a sea of mist hanging low over the lowlands, so real did it seem in the quiet and hush of the evening. As is the way with most of us, I was so engrossed with the material, work-a-day life that I had not noticed the wonderful transforming of grass land into a veritable sea. It looked so soft and silvery and I soon found it stealing away some of the disappointment I had felt because a lifetime friend had just written me she could not come as I had hoped. "This great, wide, beautiful, wonderful world" will be a very companionable friend, if we but let her—one that will be a solace and a never-failing source of joy.

Cook With Oil
Means Economy, Cleanliness, Ease

The modern wife of the modern farmer is a convert to the Scientific Management idea. She has displaced gasoline stoves and coal ranges in the kitchen with the NEW PERFECTION Oil Cook-Stove. Nearly a half million are now in use on farms in the middle west. Highly economical, the NEW PERFECTION is no less efficient. It does better baking, broiling, boiling, roasting and toasting than a coal range. But without the dirt, the dust, the excessive heat and the delay of starting fires. Lights instantly. Burns evenly. Gives forth no odor.

New Perfection
WICK BLUE FLAME
Oil Cook-stove

Ask your nearby dealer to demonstrate this wonderful stove. Have him show you its Cabinet Top, (for keeping dishes hot) with drop shelf and towel racks that makes the NEW PERFECTION a coal range in appearance and an all-the-year-round Cook-Stove. See the new Oil Reservoir with Indicator. See the Odorless, Smokeless Broiler—a marvel in itself. See our Special Oven. Note the NEW PERFECTION'S wick blue flame. Consider this stove in point of looks, simplicity and general efficiency. Judge for yourself what a saving of money, time and patience a NEW PERFECTION will mean to you.
If you can't locate a dealer, write us direct and get free descriptive booklet.

Valuable Cook Book
Send us 5c in stamps to cover cost of mailing and we will send you free of charge a dandy 72-page Cook Book that's worth its weight in gold. (100)

of-doors into our circle meetings as Mrs. E. J. Bedford has done is to confer a real favor upon us all. I sincerely hope our friend will come again—and as often as it pleases her.

Mrs. Knowlton Iowa has something for us from her housekeeping experience, and as she is an eminently sensible woman what she brings us is something worth while:

In regard to modern methods of housekeeping, mine are mostly of my own making, so they are not very modern, but since visiting some of my rich relatives I have come to the conclusion that I have things arranged to save steps, where they have not. They have a ten-room house while I have four and a screened porch, enclosed with oilcloth and building paper in winter. My kitchen is my home, as I spend most of my time there. I have a homemade wash stand covered with white oilcloth and an oilcloth splasher back of it with pockets in it for hair brushes, tooth brushes and combs, also a small mirror hanging above. There are two shelves in the stand and a door on it. On one shelf I keep towels, wash cloths and everyday aprons, on the other stockings. I noticed the relatives with the ten-room house run up stairs for their towels and aprons. I also have an old bureau which I call my sideboard. It has four drawers in which I keep my table cloths, napkins and best aprons; now the relatives run up stairs for these things also. Although I have rugs in my front room and bedroom I have carpet in my kitchen in the winter, with small rugs that I can take up and wash often. There was a porch 6x14 feet off the kitchen and I wanted a pantry, so I enclosed half of it, cut a door through into the kitchen, put up shelves, made a table cabinet, put my oil stove in it and was happy. Now I do my washing on the porch in winter. The gasoline engine is the most useful modern household appliance, I think, where one has the room for it, as it will run the washing machine, ringer, churn, cream separator and even rock the baby if one wishes.

Ingenuity, skill in adapting what one has to what one wants is a valuable faculty in a housekeeper—as what Mrs. Knowlton Iowa has been telling us aptly illustrates. If every woman would determine to make the very best of what she has, take stock as to possibilities and then resolutely go to work what improvement there would be.

I am always pleased when one of our men friends brings us a message. I therefore take pleasure in introducing Ranger Scotch, who does his own housekeeping and is therefore specially entitled to a hearing from housekeepers:

Although a western stockman I excuse myself for butting into the subject of modern housekeeping for the reason that one up a tree has unusual opportunities for observation. In these days of universal conservation of resources the average housewife is less scientific in methods of conserving her strength than a bricklayer. The husband is not altogether blameless in failing to provide conveniences. A well-established system saves hours every day. Potatoes prepared the previous evening, cereal in double boiler, breakfast cooking while the lady makes her toilet. I recommend an oil stove during hot weather. Powders and face lotions cannot equal it for the production of that cool, cheerful and dainty look in the housewife which we all admire. A well-ordered pantry with a place for everything and everything in its place. Small table with ball-bearing castors, to save strength and time between pantry, kitchen and dining room. Sink, with water supply in the house or close beside the kitchen door. Oiled floors, a saving in expense as well as labor. Rugs instead of carpets, they are more sanitary and more easily kept clean. Folding clothes rack for ironing day. Sliding breadboard and drawers under kitchen table. Bread mixer. Please note that I am describing a very ordinary home. Electric lights, furnace heat and many other desirable acquisitions are not often found in the common farm home. However, truth is stranger than fiction. Sometimes the new way is more economical than the old. For economy coal is not to be compared with oil and fireless cookers. The kitchen is the housekeeper's work shop. A small kitchen with the walls well arrayed with housekeeper's tools and everything within swing of the worker's arm is more convenient than a large one.

A vote of thanks is in order. Ranger Scotch has given us food for thought, and done so in such a way that we are not likely to forget him or what he has said. I wonder how many of our housekeepers have the nine things he recommends? If housekeeping were a man's regular business—as it is a woman's—he would have them all. The kitchen on a Pullman car, though small, is perfectly equipped, kitchens on shipboard and in hotels and restaurants are fitted up so as to save labor and expedite action; it should be so in every kitchen in every home in the land.

Ask your neighbor to subscribe for The Homestead.

THE YOUNG FOLKS

Letters and articles for this department should be addressed to Aunt Mary, Hawley, Minn.

SPRING JOYS.
(First Prize.)

Old springtime once again is here,
The jolliest time of all the year.
The leaves have nearly covered the trees;
On blossoming flowers alight the bees;
The grass so green spreads o'er the ground;
Throughout the day comes the cricket's sound;
The sky above is blue as the sea;
And the birds are singing merrily.
—Poetic Jack.

A Flower Hunt.
(Second Prize.)

One day at school our teacher told us we could go flower picking in the afternoon. We were all anxious to

LADY KATE, AGE 12.

go, as children always are when something pleasant is going to happen. When noon came we hurried to eat our dinner so we might get an early start. We emptied our dinner baskets to carry the flowers in. We had a jolly time going and coming. Our teacher went with us. When we got to the woods, there were the most Mayflowers, Dutchman's breeches, violets and other spring flowers. We went through all the woods hunting for flowers. We were all sorry when it came time to go back to the school house.—Heidi, age 13.

A Good Joke.
(Third Prize.)

One day some of us boys decided to play a joke on the school-teacher. We thought we would catch him out of the room and put a pin in his chair. We thought it would be a good joke to see him jump when he sat down. We watched till we saw him leave the room. We didn't want anyone else to see us, so we had to wait until every one else got out of the room. When the room was clear we put the

"RANGER" BICYCLES

Are equipped with puncture-proof tires, imported roller chains, imported English flanged sprockets, English featherweight steel mud guards, imported Brampton pedals, motor style saddles, bars and grips, and other distinctive features possessed by no other bicycle. No effort or expense has been spared to make the "Ranger" the World's Best Bicycle. Improved factory methods and greatly increased output for 1913 enable us to make a *marvelous new price offer*. Something *very special* to the first purchasers of 1913 models in each town. Write us *today*.

WE SHIP ON APPROVAL *without a cent in advance*, to any person, anywhere in the United States, and *prepay the freight*. We only ask you to examine and try the "Ranger" *without a cent expense to yourself* before you think of buying any other bicycle.

10 DAYS FREE TRIAL is allowed on every "Ranger" bicycle. *Not a cent cost* to you if you do not wish to keep it after riding it for 10 days and putting it to every test. Our "Ranger" bicycles are of such high quality, handsome appearance and low price that we are willing to ship to you, *prepaid*, for your examination and trial, and leave it entirely to you whether you wish to keep it or not.

LOW FACTORY PRICES Our great output, perfected methods and machinery enable us to offer you direct from the factory the best bicycle ever produced at a price that will be a *revelation to you*. Do not buy a Bicycle or a pair of Tires until you receive our large complete catalog and learn our direct factory price and *remarkable special offer*.

SECOND-HAND BICYCLES—a limited number taken in trade by our Chicago retail stores will be closed out at once, at $3 to $8 each. Descriptive bargain list free.

RIDER AGENTS WANTED in every town and locality to ride and exhibit a sample 1913 "Ranger" bicycle furnished by us. In your spare time you can take many orders for our bicycles, tires and sundries. Write at once for our large Catalog and a remarkable *special proposition* we will make you on the first 1913 models going to your town.

TIRES, lamps, cyclometers, parts, repairs and everything in the bicycle line at half usual prices. Do not wait—write today for large catalog containing a great fund of interesting, useful bicycle information. It only costs a postal to get everything. Write it now.

5 $250 Motorcycles Given Away

You see in this picture a boy riding one of the $250 Pope motorcycles we are giving away. We have already given away four of these splendid machines and here is your chance to get the fifth one. In different parts of the picture are the faces of several other boys. They are hard to find but by turning the picture about you will be able to see them. Mark at least two of the faces with a cross (x) and send the picture to me. Be sure to send me your name and address, for I will tell you all about the contest in which you can win the seven-horse power motorcycle and many other prizes. You can win.

1500 Votes Free I will send you a special coupon good for 1500 votes toward the motorcycle. All you have to do to get this coupon is to send your name and address at once. People's Co., 588 Popular Bldg., Des Moines, Ia.

pin in the chair and ran out of the room. We watched, and when we saw the teacher we began to peep in at the window. He sat down, but did not jump. We were disappointed. We went away, and afterwards learned that someone had taken the pin out of the chair. The joke was on us.—Ole.

Stories About The Browns.—Thomas Enjoys Giving.

(Prize Story.)

It was near Easter. Thomas had gone past a store and saw the window was full of Easter eggs and chickens. Thomas liked one gold egg very much, but he knew he could not have it, because his mother could not give him any money. And the egg cost 50 cents. The longer he saw it, the more he wanted it. At last he went home. On his way he decided this. He only had to work a little while during the day; in the morning he had to gather wood, in the afternoon he had to deliver washings. So he would work to earn the egg and give it to his mother. It took him only two days, and then he had 75 cents. The next day he went and bought the egg. The chickens were only five cents, and as he still had 25 cents, he bought three for Florence and Belle and William, and one for himself. Easter morning dawned bright and early, and I bet there wasn't a happier boy when he saw the happy faces of his mother, sisters, and brother. Thomas had learned that there is happiness in giving.—Bertie-ha-ha, Age 11.

PLEASANT FIELDS OF HOLY WRIT

Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON

2d Quar. Lesson 5, Gen. 40. May 4, 1913.

JOSEPH INTERPRETS DREAMS—THE STORY.

Joseph was a rose of Jericho. He bloomed anywhere. Palace, pit, or prison, it mattered not. He was brilliant and fragrant under most adverse conditions. He has justly become the universal ideal of personal purity and disinterested kindness. That is what makes his story so fascinating and valuable in the highest degree. As it is a transcript of human life, it is illuminating and applicable wherever and as long as there is human life. Joseph came in contact with a superb civilization, the architecture of which remains a marvel to our day. He heard more musical instruments than he ever dreamed of; harp, lyre, guitar, flute, single and double pipe, tambourine, cymbal, and drum. He saw more industrial arts plying than he knew were in existence; the making of pottery and glassware and metal vessels, arms and domestic implements, and the weaving of such linen as the modern loom cannot match. Egypt was to Joseph a schoolroom crowded with object lessons. He was getting all the advantage of foreign travel and residence; coming in contact with one of the oldest and best civilizations of earth; reading its literature, studying its laws, observing customs. That was what providence sent him to Egypt for. His position as a domestic slave, instead of limiting his opportunities, actually added to them. But the rose tree in Joseph's lovely character developed into a sturdy oak under the blast of powerful temptation. He stood erect, crying: "How can I do this great wickedness and sin against God?" Conscious of innocence and integrity, he suffered with patience the foul imputations against his character, which he could deny but not disprove, the circumstantial evidence being strong against him. Now followed the second great and inexplicable reverse in his career. The lot of a slave was bad. That of a prisoner was worse. The question "Why?" must have often framed itself in his mind, but he did not brood over his lot. On the contrary, he adjusted himself to the situation. Just as in the palace of a prince, so in the prison of a king, he gave such evidence of capacity and fidelity that everything was put in his hands, so that whatever was done there, "he was the doer of it." After his own fateful experience in dreams, one would have thought he would have side-stepped the dreams of his fellow captives. That he did not do so is evidence of his strong human feeling. For one, he anticipated the joy of deliverance. The other he helped to prepare for his impending doom.

Paint and protect your barns with Sherwin-Williams Commonwealth Barn Red

Do it now, for there is no better investment than a good protective paint that will keep your farm buildings in good condition all the year around.

Sherwin-Williams Commonwealth Barn Red has a remarkable covering capacity and spreads well under the brush. It is a clear, handsome red that retains its freshness much longer than ordinary paints. And it is merely one of the many Sherwin-Williams Finishes that will add to the life and looks of your buildings and your home—inside and out. You can buy them everywhere. Write for our booklet,

"Paints and Varnishes for the Farm"

It is free—and it will give you a good many valuable ideas and suggestions about what paint can save for you in dollars and cents.

SHERWIN-WILLIAMS PAINTS & VARNISHES

Best dealers everywhere. Address all inquiries to The Sherwin-Williams Co., 683 Canal Rd., Cleveland, O.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect fitting, seam allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

5972 Girls' Dress.—This attractive frock may be made with long or short sleeves and with plaited or gathered skirt. It closes at the front and is quite a simple model to carry out. The sailor collar is a nice feature and this may be made of self material or of contrasting goods as preferred.

The pattern 5972 is cut in sizes 6 to 12 years. Medium size requires 3¼ yards of 36-inch material with ⅜ yard of 27-inch contrasting goods. Price of pattern ten cents.

4480 Boys' Russian Dress.—The Russian dress pictured herewith is for the small boy who has not yet reached the age when trousers are worn. The garment is made simple and plain with the closing at the right side of the front. Any of the wash materials can be used to make this dress.

The pattern 4490 is cut in sizes 1 and 2 years. The two-year size requires 2 yards of 27-inch material. Price of this pattern ten cents.

5865 Ladies' Dress.—This dress is just the thing for afternoon wear. It can be made with either the high or low neck. The skirt is a three-piece design. Linen, serge or pongee can be used to make this dress with the trimming of contrasting material.

The pattern 5865 is cut in sizes 32 to 42 inches bust measure. Medium size requires 4⅝ yards of 36-inch material with ⅜ yard of 27-inch contrasting goods. Price of pattern, ten cents.

6009 Ladies' Shirt Waist.—This shirt waist will be just the thing for wear with a tailored suit. It can be made with either the standing or rolling collar. Linen or madras can be used to make this waist with the collar and cuffs of contrasting goods.

The pattern 6009 is cut in sizes 32 to 42 inches bust measure. Medium size requires 2 yards of 44-inch material with ⅝ yard of 27-inch contrasting material.

3751 Good Kitchen Apron.—The woman who does housework needs an apron that protects the waist as well as the skirt. This one-piece apron is of that kind and will be found satisfactory in every way. Gingham or linen can be used to make this apron.

The pattern 3751 is cut in sizes 32, 36, 40 and 44 inches bust measure. Medium size requires 4½ yards of 36-inch material. Price of pattern, ten cents.

Oklahoma farmers pay higher interest rates than those of any other state. The average is 11.58 per cent per annum, according to information obtained by the Department of Agriculture at Washington. Forty banks reported from Oklahoma. One quoted an average rate of 8 per cent, twenty-four reported an average of 10 per cent, two averaged 11 per cent, five received 12 per cent, five obtained 15 per cent, one 18 per cent and two reported an average rate of 20 per cent.

LEARN to cut and fit and make your dresses at home in a stylish and up-to-date fashion from the National School of Dressmaking. The simplest and least expensive system in existence, and the only school of real tailor cutting by a yard stick and tape line. The same method as is taught in Paris, France. Many of my pupils are earning fine salaries. Write for particulars and free catalog.

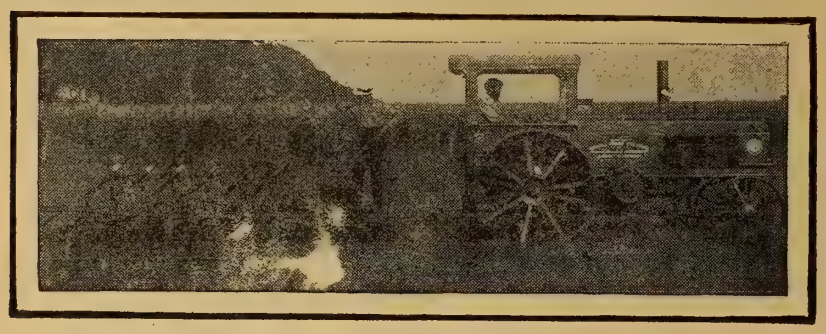
WHY FARMING WITH TRACTOR IS BEST.

(Continued from page 3.)

on a farm of one hundred and sixty acres or over.

Considerable confusion exists as to the correct meaning of the words horse power. There is no difference between steam and gasoline or electric horse power. Horse power is defined as the ability to perform 33,000 foot pounds of work per minute at the crank shaft twenty-four horse power when used for belt work.

Under average conditions a 12-24 horse power will pull three or four fourteen-inch plows and plow ten or twelve acres per day. A tractor rated 20-40 horse power will pull eight to ten plows and turn fifteen to eighteen acres per day, while a tractor rated 40-80 horse power will turn twenty-five to thirty acres per day. A man with a medium-size farm of 160 to 400 acres should own about a 12-24 horse-power tractor; with a 400 to 700-acre farm



GANG PLOW OUTFIT—BEATS NINE HORSES AND THREE MEN.

or pulley and this is known as brake horse power. We have another rating of horse power used in connection with the tractor and this is known as "drawbar horse power," meaning the amount of power obtainable at the drawbar or the amount of pulling power.

A tractor requires from 10 to 25 per cent of the power it develops merely to move itself over the ground. There are friction losses in the gearings and bearings using up considerable power. Under average conditions about two-

TRACTOR IN SMALL FARM PLOWING.

thirds or 66 2-3 per cent of the power developed at the crank shaft can be used at the drawbar. Where the ground is soft it may be cut down to one-third or 33 1-3 per cent of the power developed at the crank shaft, but in rating the engines the manufacturers generally rate them at about one-half or 50 per cent. In this way a tractor which develops twenty-four brake horse power would be rated 12-24, meaning it would develop twelve horse power for traction purposes and he should have a 20-40 horse-power tractor and where larger farms are tended or outside work is to be done the correct size to buy is the 40-80 horse-power type, which is capable of most any kind of heavy work.

Below is given the actual cost of feed and labor as between the horse and tractor farming while in operation, these figures being the average for plowing with a 12-24 horse-power engine and a self-lift plow with one man for operation one day:

Cost with twelve horses:	
7 bushels of oats at 35¼c	$2.45
187 pounds of hay at $10.00	.94
Labor of three men at $1.50	4.50
Board of three men at 50c	1.50
Total	$9.39
Cost of same work under same conditions with a 12-24 horse-power tractor:	
Average fuel cost	$2.80
1½ gallons lubricating oil	.40
Cost of engineer	2.50
Board for engineer	.50
Total	$6.20

Thus it will be seen that farming one ten-hour day with horses will cost about $9.39, while farming the same length of time with a 12-24 horse-power tractor will cost about $6.20, a saving of about $3.19 per day by the use of the tractor and at the same time doing a better grade of work.

The first cost of twelve good horses

TRACTOR OPERATING PLOW AND ROLLER.

that will last as long as the tractor, including harness, etc., will be about $2,400, while the cost of a good 12-24 horse-power tractor will be $1,200 f. o. b. factory, showing that the tractor costs only one-half the price of the horses and is capable of doing more, better and steadier work regardless of heat.

There are so many different types of tractors on the market today that the man who is not an expert mechanic does not know which way to turn when he is in the market for a tractor. Every company claims its tractors are the best and point with pride to a few special features which they have adopted. They claim to have the best governors, the best carburetors, etc., but I have never yet heard of anyone taking the carburetor off his automobile and replacing it with the kind he uses on his tractor.

A tractor should be equipped with a good lubricating system which will lubricate all working parts thoroughly and thus prolong the life of the engine. It should be of moderate weight, as one that is too heavy will sink in too deeply, thus using up its power, while one too light will not last. A 12-24 horse-power tractor should weigh 6,000 to 9,000 pounds; a 20-40 horse power 10,500 to 12,500 and a 40-80 horse power should weigh 18,000 to 22,000 pounds.

The fuel question of the future has been the subject of deep thought. With gasoline coming up daily in price it will soon reach the limit at the present rate of advance. Therefore we must look for another fuel which is inexhaustible in quantity and can be made out of farm materials which now go to waste. This wonderful fuel is alcohol and when the prices on gasoline and kerosene go too high it will naturally take their place as the fuel for internal combustion engines. When the demand becomes great it can be produced in large quantities at a very reasonable cost and no doubt the day will come when we can operate our internal combustion engines cheaper with this fuel than we now can with gasoline or kerosene. However, like all other projects, it is doubtful if this will be taken hold of until gasoline and kerosene have reached a very high price. Alcohol can be burned in engines designed for gasoline and it may be assumed that such an engine will develop as much power with alcohol as fuel as with gasoline. This being the case the fuel which is placed before the public at the lowest price will be the one which will become general in use and alcohol looks very favorable to meet this condition.

UNITED STATES TIRES

offset high cost of gasoline

Never before in the history of motoring have motorists received as much mileage from their tires as they are getting today from United States Tires.

The average mileage yielded by these tires has been raised to a point from 25 to 50 per cent above that ever reached by any tire maker previous to the organization of the United States Tire Company.

You men who drive in the country will be actually able to operate your cars for less money this year than you have ever been able to do before—this in spite of the continued rise in the price of gasoline.

You will be forced to pay 50 per cent increase in the price of your fuel but you can save more than this on your tire mileage.

This is the most important service that has ever been rendered to motorists by any tire maker.

It will mean a saving of from forty to fifty dollars to every United States Tire user.

But, bear this in mind—you can't get this big reduction in tire expense—you can't off-set the high cost of gasoline without using United States Tires.

Cost no more than you are asked to pay for other kinds

UNITED STATES TIRE COMPANY, NEW YORK.

United States Pneumatic Tires are guaranteed when filled with air at the recommended pressure and attached to a rim bearing either one or both of the accompanying inspection stamps. When filled with any substitute for air or attached to any other rims than those specified, our guarantee is withdrawn.

NEWS OF THE SALE RING

Geo. Allen & Sons' Short-Horn Sale. The great gathering of Short-horn breeders brought together at the sale of Short-horn cattle made at South Omaha on April 22d, by Geo. Allen & Sons, Lexington, Neb., was certainly a fitting tribute to the good work of the late Geo. Allen as a breeder of Short-horn cattle, and evidenced the feeling of good will entertained by Short-horn men everywhere for those that now carry on the work where that master breeder left off. One of the best sales ever held within the state of Nebraska was made, and while good prices were realized, yet extra value was rendered in every instance. Bellows Bros., Maryville, Mo., were among the strong buyers of the sale and paid the top price. F. W. Harding, Anoka Farms, Waukesha, Wis., probably secured the greatest value of any in the cow line, and without question K. F. Dietsch, Orleans, Neb., secured the bargain of the bull offering when he purchased the great young bull, Count Victor, a grandly bred Victoria and an individual that fills the eye of the practical Short-horn breeder. The grand breeding cow, Sunbeam Violet 5th, one of the very best of the Allen herd went to the new breeder, Wm. Arrowsmith, Exeter, Neb., and at considerably less than she should have brought. Col. H. S. Duncan did the selling and rendered excellent service to both buyers and sellers. Col. Duncan stands today as the foremost man in that line in America. The complete report of the sale is as follow:

COWS.

Butterfly Lady 9th, calved May, 1908; Howell Rees & Son, Pilger, Neb. $300
Lady Missie 10th, calved April, 1908; Bellows Bros, Maryville, Mo. 505
Raspberry of Anoka, calved August, 1909; Fred Wordiman, Wisner, Neb. 325

8 bulls .... 2,530; average.... 316.50
53 head .... 17,000; average.... $320.75

The Firme & Stone, Short-horn Sale.

One of the best sales of Short-horn cattle ever held in central Nebraska was made by R. C. Firme & Sons, Hastings, and A. A. Stone, Hansen, the sale being held at Hastings on April 23d. There was a steady rain all day which greatly interfered with the automobile attendance, which is a great factor in this section of the state. There was a good gathering of breeders from a distance however, and the bidding was snappy from the start. Credit is due the gentlemen making the sale for the fine manner in which they conducted the auction and the choice lot of breeding stock offered. K. F. Dietsch, Orleans, Neb., and L. Chestnut & Sons, Geneva, Neb., were the heaviest buyers and the strongest bidders, really constituting the chief support of the sale. Col. H. S. Duncan did the selling. Those selling for $100 or more are listed as follows:

COWS.

Lady Violet, calved May, 1904; J. H. Hoagland, Hastings, Neb. $130
Substitute for Rosemary, calved June, 1907; C. E. Higginbotham, Hastings, Neb. 125
Rosetta, calved May, 1911; G. L. Rouse, Alda, Neb. 110
Sweet Lady, calved January, 1910; G. F. Hart, Summerfield, Kan. 230
Crimson Bud, calved April, 1909; K. F. Dietsch, Orleans, Neb. 145
Mary Queen, calved April, 1911; G. F. Hart 145
Queen Violet, calved December, 1908; F. O. Barber, Skidmore, Mo. 120
Roan Victoria, calved April, 1911; H. A. Barens, Summerfield, Kan. 145
Lady Duchess, calved November, 1906; E. W Cosgrove & Son, Farnam, Neb 155
Daisy Kuper, calved February, 1910; F. O. Barber 160
Lady Napier, calved May, 1901; J. M. Steward & Son, Red Cloud, Neb. 105

SUMMARY.

24 females ..$3,875; average....$161.50
10 bulls .... 970; average.... 97.00
34 head .... 4,845; average.... 142.50

Seventy-three factories are engaged in the manufacture of beet sugar in the United States. The quantity produced last year was 692,556 tons. The average working period for the factories was eighty-six days. This required 5,224,377 tons of beets. They were grown on 555,300 acres of land, and the average beet production per acre was 9.41 tons. The state of Michigan, which has seventeen factories, and the greatest number in any one state, has the smallest yield of beets per acre—6.75 tons. Colorado excels all other states with a yield of 11.32 tons per acre. California beets lead in percentage of sucrose, or pure sugar contents.

IMPROVED CORN HUSKER Five samples to introduce, postpaid, $1.10. Money back. Clark, 54 W. Lake St., Chicago.

Fine Prize Pony Given Away

You see in this picture a boy riding one of the splendid prize ponies I am going to give away. In other parts of the picture are the faces of several other boys. They are rather hard to find, but by turning the picture about you can see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send your name and address so I can tell you all about the contest in which you can win a beautiful pony and many other prizes.

1500 Votes Free

I will send you a special coupon good for 1500 votes toward the pony. All you have to do to get this coupon is to send your name and address at once.

A. M. Piper, 800 Popular Bldg, Des Moines, Ia.

Free To Boys

I Have a Glove, Mitt, Mask, Ball, Bat, Cap and Belt for Every Boy Who Will Write to Me.

There are seven splendid pieces in this great outfit. The ash bat is a good one. The mask is made of heavy wire, full size. The catcher's mitt is thickly padded, very heavy and has patented fastener. The glove is of tanned leather and has patent clasp. The ball is strongly stitched and will last. A neat, adjustable belt and a dandy cap complete this great outfit. Remember you get the whole outfit of seven pieces for a little easy work. Write me today and I will tell you just how to get it.

FIELD NOTES.

F. Bunker, Kilbourn, Wis., has two Polled Durham herd bulls, eighteen months old, and ten females that he is offering for sale in his advertisement appearing on page 29 of this issue. These animals have been tested and registered and Mr. Bunker announces that they are right.

Three good Poland China fall boars are offered for sale by Harry Dodds, Florence, Neb. These are all sired by I Am Big Too, the sire of the Nebraska State Fair winner, Futurity Jack. These are good ones and are well worth the money. He is asking $35 and $50 for them and they are bargains at that price.

Davenport & Mack, Belmond, Iowa, report the sale recently of the good red yearling Scotch Lancaster bull to Mr. Frank Riebhoff, Algona, Iowa, who will place him at the head of his herd of Short-horns. They state that this is an extra good bull and one that will leave his mark at Algona. The new advertisement of Davenport & Mack appears on page 29 of this issue.

On page 16 A. E. Stonebrook, Hampton, Iowa, advertises ever-bearing Americus strawberries at the rate of $1.50 per dozen and in larger quantities at a reduced price. The Americus is a continuous bearer of special merit. Other varieties named in the advertisement are selling at seventy-five cents per 100 or 300 for $2. Send orders to the address named.

The manufacturer of the Jackson automobile gives some important facts with reference to the care of the car, when he says: "The first thing to do in cleaning an automobile is to avoid wiping dust from the body with a dry cloth or a wet one. Even the finest dust will scratch the surface of the varnish and paint that make your car look so fine; and it is worse than foolish to attempt to wipe off mud stains. The only proper way to remove dust and mud is by washing. A heavy stream of water should be the first course, and this should not strike the car with great force. It should be directed slantwise against the sides of the body, and plenty of it used. If there is much mud on the wheels or body it should be allowed to soak well and soften before a sponge is applied; and then a constant stream of water should flow over the part being washed. A good soap should be used to remove grease or oil—never use gasoline. If a man wants to take especial care of his car's appearance it is well to shower the body thoroughly with water if a trip is to be made through mud or rain. This will prevent spotting of the varnish by mud and water."

The usual difficulty in securing binder twine just when it is needed should warn farmers not to put off making their purchases. In an advertisement on page 24 August Post, Moulton, Iowa, advises our readers that he is prepared to make quick shipments and sell on reasonable terms. He will sell at special prices to farmers' organizations or in car-load lots. He also wants farmers to act as agents. The publisher of this paper has enjoyed an acquaintance of a quarter of a century with Mr. Post and has learned that absolute dependence may be put in his business dealings. He has been handling binder twine for a great many years and has sold immense quantities of it to farmers who have found profit and satisfaction in the deal. For further information address August Post, Moulton, Iowa.

One hundred and twenty-five registered Holsteins consigned and guaranteed as represented will be sold at the Wisconsin Breeders' fourth annual sale to be held at the fair grounds in Watertown, Wis., on May 20th and 21st. In this sale only desirable sons and daughters of some of the best animals of the breed will be offered. The list includes females with credible records, in calf to sires whose dams and granddams have official records ranging from twenty-eight to forty pounds in seven days. All animals over six months of age will be tuberculin tested for universal shipment. Watertown is easily accessible on the Chicago and Northwestern, on the Milwaukee & St. Paul and interurban railways from Milwaukee, Fond du Lac, Janesville, and Madison. Write to S. E. Jones, Box E., Watertown, Wis., for catalog.

Duroc Jersey Fall Boars.

Some very choice Duroc Jersey fall boars are offered for sale by Madison Spencer, Audubon, Iowa, and he is pricing these at $25 to $40 if taken soon. They are well bred and are all right. When writing him kindly mention The Homestead.

Scotch Heifers for Sale.

On page 29 Perry O. Brown, Lamoni, Iowa, advertises twenty head of good Scotch heifers for sale bred to Velvet Goods and he is pricing them where they will sell. He also offers a few choice young bulls. Write him at once or go and see these cattle.

Choice Fox Terriers.

N. R. Rogers, Peru, Neb., a gentleman that is well known to the readers of this paper as a breeder of high-class Chester White swine is now offering a number of extra select Fox Terrier puppies as well as a limited number of females. These females will be sold open or kept and bred to the new stud dog which Mr. Rogers recently purchased at a very long price. This stock is absolutely first class, priced worth the money and every farmer should have one of these busy rat dogs about the place. Mention this paper when you write. Kindly notice the advertisement on another page of this issue.

Dynamite in Farm Work.

Modern methods and the application of power have worked wonders in practically every department of farm operation. By the use of dynamite ditches are almost instantly made where formerly days of hard labor with spade and shovel were necessary. Stumps and boulders are eliminated in the same maner. Subsoiling and excavation are also cheaply done. Some of these statements may appear strange to our readers. If that is the case very good proof may be found in the Farmer's Handbook No. 105 which is advertised on page 16 and which may be secured without cost, by application to Du Pont Powder Co., Wilmington, Del.

Swan & Ellis Durocs.

The other day when we visited the herd of Swan & Ellis, Indianola, Iowa, the men folks were absent, but we took a survey over the farm and we saw a splendid lot of spring pigs and it looks as though they are going to be right for the coming season. No one bought better sows last winter than did this firm and with what they already had it looks bright for them the coming season. Later in the season we will tell you more about their Durocs. They will make a sale together with Will Sells on August 8th, and you can figure on their having something the breeders will want.

Hechtner's Galloways.

Those of our readers who are wanting a good Galloway bull should read the advertisement of C. S. Hechtner, Chariton, Iowa, on page 29. He is offering fifteen splendid young bulls for sale and most of these are good enough to head good herds. Some of these are sired by his celebrated old bull Standard Favorite and others by Othello's Graham. These bulls range in age from eleven months to two years. He can also spare a few good cows. The Hechtner herd of Galloways is recognized today as being the best in the West. At the leading fairs and the International the past few years his herd has been winning the lion's share of the ribbons. He just sold a bull and six choice heifers to go to a young breeder at Unionville, Mo., and he recently sold his noted old show and breeding bull Standard Favorite to A. M. Tally, Mead, Neb. He has a new importation now on the road and they will land at Quebec about April 29th, and these will arrive at Chariton about June 6th. There will be eleven bulls and two heifers in this importation, the best that could be bought in Scotland. Among the eleven bulls he is bringing are three grand champions in the leading shows in Scotland and they range in age from yearlings to two year olds. Any man that wants a bull or desires to start a Galloway herd should by all means get in touch with Mr. Hechtner. When writing him kindly mention this paper.

Popular Stock Auctioneer.

On another page of this paper our readers will find the announcement of Col. Fred Reppert, Decatur, Ind., whose reputation as a live stock auctioneer is of the best. Col. Reppert is an enthusiast in his line of business. He is energetic, painstaking and ever on the alert to secure the best returns for his patrons. Naturally such a course brings him a liberal patronage so that oftentimes his date book is filled up for a considerable length of time in advance. Our readers who contemplate making public sales of cattle or hogs should get into correspondence with him at once so that their dates may be secured. Address all inquiries to Col. Fred Reppert, Decatur, Ind.

Hog-Joy Oiler at Ames College.

The matter of freeing hogs from lice and kindred parasites seems to be well solved by the use of the Hog-Joy oiler. These oilers have been installed at several state agricultural experiment stations including the one at Ames, Iowa, and have also been installed on the farm of Dean C. T. Curtis. This oiler is made on a different principle than any other on the market, cannot break or get out of order as it has no small or delicate parts, works perfectly the year around, will use any kind of oil, and is sold on a thirty days free trial. Full particulars regarding this successful adjunct for healthy hogs can be secured by addressing Hog-Joy Co., 301 N. 5th St., Springfield, Ill.

Theobold Offers Crimson Chief.

A junior yearling Duroc Jersey boar of the very choicest breeding and a real show-yard proposition is being offered by J. C. Theobold, Ohiowa, Neb. Mr. Theobold has one of the very best bred herds within the state and this boar has been in use in the herd the past season. He is Crimson Chief and by Ohio Belle's Crimson by C. W. Again. The dam of Ohio Belle's Crimson is the great breeding sow Ohio Belle by Ohio Chief; the dam of Crimson Chief is Chief Lady by Valley Chief, and she is one of the very best daughters of this great sire. Every ancestor of Crimson Chief for four generations is of the very best of the breed and the writer is well pleased with him. It is our opinion that this boar will come near winning good places this fall at the shows; $150 will buy him if prompt action is made. Mention The Homestead when you write.

W. M. Sells' Durocs.

We recently visited W. M. Sells, Indianola, Iowa, and found that he has a nice batch of pigs again this spring. He has a fall litter by Crimson Wonder Again and out of H. A.'s Queen and he intends putting two of her boars and two of the gilts in his August 6th sale. The other boar in this litter he will keep for himself, and this may be one of the last times breeders will ever have to buy the get of this famous old boar and sow. The old sow did not have a spring litter this year so it behooves those who want this breeding to remember this fall sale. Mr. Sells has eight daughters of this noted sow today in his herd and the demand for them is so strong it is hard to hold them. He has sold fifty-two head of boars and sows out of H. A.'s Queen for $5,575 in the past five years and he has three boars and eight sows left. Some of the best herd boars today in the West are sons of this famous old brood sow. Mr. Sells and Swan & Ellis expect to sell one of the toppiest offerings of Durocs in their August sale that will be offered the coming fall.

Shire Horse Sovereignty.

We have before us a little booklet from the pen of John G. Truman, the well-known Shire horse specialist, which is really an important contribution to the horse literature of this country. Mr. Truman is probably as well fitted for the work of preparing such a book as any man living. He takes up in the first place the Shire as a breed, pointing out the natural prepotency which reproduces the massiveness, docility and superb muscling, which are the striking characteristics of the Shire. Divisions of the book treat also on these subjects: contemporary supply and demand, farm demand now dominates prices, later Shire importations, Shire geldings hold market records, present-day market geldings, the soundest breed on earth, the Shire in America, and good reason for Shire prepotency. The book makes interesting reading for farmers who realize the need for securing draft merits in their farm horses. Copies of it may be obtained free by writing to J. G. Truman, president American Shire Association, Bushnell, Ill.

Morris Fowler's Poland Chinas.

The season just past has been one of the most successful of the years that Morris Fowler, Arcadia, Neb., has been in the business of breeding the big Poland Chinas. Mr. Fowler has been very successful at all times, and today maintains one of the very best herds of big stuff in the central part of the state, but the season just passed has been a very good one for Mr. Fowler. The bred sow sale was one of the very best ones of the year; at that time he sold a little over forty sows and they made the nice average of $47 per head, making it the equal and better than many of the sales made by the old timers in the business. Mr. Fowler has at present about eighty spring pigs, nearly all the get of his boars, Tom Sampson, by Thos. A. Stattuck's Sampson, and also some are sired by a son of Lingford's boar, Sampson by Pawnee Lad. These pigs are from a fine of Great Wonder by Long Wonder sows, and a few daughters of Big Tecumseh, and two daughters of Bell Metal Pan a litter brother to the famous Big Tom. This line of breeding should make good, and it is doing it. Choice boars will be offered before very long, in fact a number of farmers' boars, those of fall farrow are for sale right now. When you write be sure to mention The Homestead.

Riverside Short-horn Herd.

The Harrah herd of Short-horn cattle at Newton, Iowa, is the same old herd which has been in existence on the same farm for perhaps twenty-five years. The same excellent strains of Scotch blood predominate and the same care has been used in the selection of breeding animals. As a result the farm can show a large number of bulls that are good enough for anybody and bred as well as any that can be found. Mr. Harrah is offering for sale a number of these bulls and would like to get into correspondence with those that appreciate style, quality and finish coupled with true beef-making merits. Address inquiries to Geo. D. Harrah, Newton, Iowa, or better, make a personal visit to the farm. See advertisement on page 29.

Egg and Poultry Profit.

Whether or not money is made or lost on poultry and eggs depends quite largely upon the good judgment employed by the owner. Quite frequently chickens that are unprofitable for one owner would be very good money makers for another, the difference arising from the manner of treatment. Health, thrift and judicious feeding are the essentials in making money from poultry. It is not necessary to give medicines to obtain these conditions. It is important, however, that good digestion be maintained. One of the best means of keeping the digestion right in poultry is to use daily small doses of Dr. Hess Poultry Pan-a-ce-a. This preparation is advertised on page 9. It is a result of many years of careful observation in poultry raising. Further information concerning it may be obtained by writing to Dr. Hess & Clark, Ashland, Ohio.

Wall & Sons' Herefords in Kansas City Sale.

E. E. Wall & Sons, Leeton, Mo., are sending fifteen head of Hereford bulls to the May 6th sale to be held at Kansas City, Mo., under the management of R. T. Thornton, 1309 E. 15th St., Kansas City, Mo. E. E. Wall & Sons write that these are choicely bred, are about eighteen months of age, and that there are herd headers among them. Others are good strong fellows that should appeal to buyers desiring good stock bulls for steer production on the farm or range. Wall Onward, the sire of some of the bulls in the sale, is a four year old sired by Onward 27th. He has proven a valuable sire. Wall 17th is a two year old sired by Wall Onward; he is a short-legged, thick-fleshed fellow that should make a good sire. King Royal by Beau Mystic 4th is a November yearling with quality and excellent breeding. George, a September yearling by Santa Claus is an extra thick-fleshed, short-legged fellow. The one cow contributed by us is Mattie Columbus by Columbus 27th and sells safe in calf to Wall Columbus 33d. She is a modern Hereford that will please Send now to Mr. Thornton for catalog and note the breeding.

Stanton Buys Sayer Short-horns.

Thos. Stanton, Wheaton, Ill., has just consummated one of the biggest deals that has ever taken place in pure-bred beef cattle circles in this country, having purchased the entire herd of Short-horn cattle belonging to George J. Sayer, McHenry, Ill., numbering around 100 head. Fifty of the top cattle in this collection will be cataloged for a sale at Sittyton Grove Farm, Wheaton, Ill., June 3d, and will include one of the greatest lots of Short-horns ever submitted for public appraisal. Three great bulls, Roan Sultan, White Star and Prince Imperial, will be listed, as well as such females as Mildred of Mapleton, Fair Start 2d, Susan Cumberland, and other remarkable specimens of the breed, both show and breeding material of the strongest sort. This move is in line with Mr. Stanton's work as a Short-horn adherent. There is no proposition too big for him to take hold of, and his enterprise in this matter will give the public an opportunity to place public sale values upon a lot of cattle that under any other conditions could not be secured at any price. Applications for catalogs for this big event should be filed at once with Thos. Stanton, Wheaton, Ill. Kindly mention The Homestead when you write.

Big Sampson for Sale.

The writer is of the opinion that H. B. Francisco, Hastings, Neb., is offering one of the herd boar bargains of the year when he offers Big Sampson 62026. This is one of the really big boars of the breed, will easily mature into a 1,000-pound boar and is a sire of the very highest class stuff. He is sired by Sampson 53261 by Jumbo Jr., by Wintermute's old boar Jumbo. He is out of Long Beach by Great Hadley and Long Beach is today one of the very best sows of the Thos. A. Shattuck herd. She is out of Blue Bell the sow that raised the highest priced litter sold at auction in Nebraska in 1910 and Long Beach is one of this litter. Big Sampson is immune, having gone through the cholera last fall and the fact that Mr. Francisco lost nearly his entire sow herd last fall is the reason that he is for sale at this time. Some very choice fall gilts by Big Sampson were saved and a few of the old sows were brought through. These big sows are now bred to Big Sampson for early fall litters and the fact that everything but a very few head will be sired by him is the only reason that he is offered for sale. The price of $400 does not convey a right idea of the value of this boar, for he is one of the real good ones. A few sows will be taken in part payment. The writer recommends this boar and any correspondence addressed the writer concerning him will receive immediate attention. He is a bargain seldom met with. Kindly notice advertisement on page 29 and

when writing Mr. Francisco mention this paper.

Ehlers Offers Short-horn Bulls.

F. H. Ehlers, Tama, Iowa is advertising for sale a September yearling Scotch bull sired by Rob Roy and out of Lady Anniex 16th by Imp. Red Knight and a November yearling Missie bull sired by Scotch Sultan by Whitehall Sultan. Scotch Sultan sold for $1,000 to head the herd at the University of Illinois. These bulls are herd headers and are priced worth the money. Mr. Ehlers would also sell some good Scotch cows and heifers worth the money. He sold Lancaster Sultan to George Knoop, Clutier, Iowa. See page 29 and write for prices mentioning The Homestead.

C. W. Phillips Offers Fall Boars.

Big-type Poland China boars of August and September farrow can be purchased from C. W. Phillips, New Sharon, Iowa. Mr. Phillips has some extra good boars left sired by Long King Superior and Big Bone 3d. Long King Superior is one of the good sons of Long King and the boars Mr. Phillips is offering are long, heavy-boned fellows and anyone who will send Mr. Phillips a check for $25 will receive an extra good boar. Mr. Phillips guarantees satisfaction in every respect or refunds your money, and his guarantee is as good as a bond. See page 29 and write him mentioning The Homestead.

Hanenkamp's & Fowlie's Duroc Herds.

A couple of enterprising stockmen and men that are getting some good Durocs gathered together are A. H. Hanenkamp and E. A. Fowlie, Hickman, Neb. These gentlemen have been buying some of the choice stuff offered in Nebraska and have been able to make them a bit better each year. They will hold a sale in Hickman next winter, and will have a nice lot of boars for sale at private treaty. The writer wishes to say that these gentlemen have a lot of stuff that in point of breeding or individual merit should appeal to the readers of The Homestead, and we fully believe that they will offer good stock at prices anyone can afford to pay. We will have more to say of this stock a little later. Kindly keep the herds in mind, and when in the market, give them a trial.

Choice Poland China Bred Gilts.

Beall & Jackson, Roca, Neb., are offering right now a choice lot of great big fall gilts. They are the sort of Poland Chinas that everyone is in search of, and they are sure the real big ones. These gilts are sired by Nebraska Wonder by A Wonder and also by Chief Price Again. These gilts will be sold open, or will be bred if ordered soon. No gilts will be bred except those for which orders are booked, and they will be bred to your choice of our present herd boars. The Chief Price Again gilts may be bred to Nebraska Wonder or a choice son of Nebraska Wonder and the Nebraska Wonder gilts may be bred to our young herd boar, Sampson Jr., by Shattuck's famous boar, Sampson. Kindly notice the advertisement on another page and when writing be sure to mention The Homestead.

Percheron Stallions for Sale.

Maasdam & Wheeler, Fairfield, Iowa, have a few high-class imported and home-bred Percheron stallions for sale. Among them are some outstanding good ones that will be sold worth the money. They are blacks and grays that will develop into stallions weighing from 2,000 to 2,300 pounds. E. G. Wheeler, the junior member of the firm, will leave for France about May 25th to bring over seventy-five stallions and mares of the best he can buy. He will also visit the leading Short-horn herds of Great Britain in quest of about thirty good Scotch females and a good bull. This firm have a section of land at Sibley, Iowa, elegantly situated for the live stock business on which they keep their Short-horns and a number of Percheron mares. At the present time they have on the Sibley farm over 100 Short-horns headed by Scotch Avon, a grandson of Imp. Choice Goods, that was good enough to win at the Iowa State Fair, 1912. See ther Percheron advertisement on page 32 and write them mentioning The Homestead.

The Rexall Herd Durocs.

A herd of Durocs that has come into the limelight the past season and which promises to become much more popular this year is the herd owned by Danford & Dewhurst, Ord, Neb. It was from this herd that the grand champion, Critic B., came a year ago. His sire, the great breeding boar, Dusty Critic 2d, is still in service in this herd and will probably make his appearance at the fair this fall. He has been shown a little and without defeat so far. He has been much used the past season and is not in high condition, but if he can be gotten into the condition that he should have, he will surely be a pretty hard one to beat this fall. Some extra choice pigs are on the farm and many are by him and the greater part of the remainder are by Cedar Grove Clif by Lincoln Chief by Belle's Chief. Cedar Grove Clif was the first prize under six months pig at the Kansas State Fair last year, and Lincoln Chief was the first prize under six months pig at Lincoln the fall of 1911. Lincoln Chief was bred by H. H. Koenig, De Witt, and sold to Mr. Widle, who bred Cedar Grove Clif and showed him last fall, winning all along the line with him. Readers of The Homestead should keep the herd in mind, and when in search of some high-class stuff, both in point of breeding and individual merit, write the owners of this herd for what you want. They will be at the Nebraska State Fair, and will bring out a lot of nice stuff, among which are a senior boar and a senior gilt that will be hard to beat. These are September pigs and will weigh some better than 300. They are going to be the real big ones and they are smooth and nice. Should you write for prices on anything kindly mention The Homestead when doing so and address all correspondence to B. F. Danford, Ord, Neb.

Importation of Hereford Cattle.

The first importation of Hereford cattle that has been made to this country in over a decade will leave England in a few days consigned to George Leigh and William George, Aurora, Ill. The importation will number fifty head, and will consist entirely of animals that have been carefully selected from the best herds of England regardless of cost. Included will be half a dozen top bulls, among them three of the best to be found in England, both as regards breeding and show-yard merit, a number of strong breeding cows with calves at foot and a string of strong two-year-old heifers. It is the intention of Mr. Leigh and Mr. George to submit this lot of cattle for public approval at a sale next fall. Later on our readers will be given full particulars regarding this importation.

Ninety Durocs at Auction.

On Wednesday, May 21st, E. S. Mayes, Jr., Springfield, Ky., again invites Duroc breeders of the world to visit him and buy ninety head of select Durocs. Mr. Mayes became noted as the owner of the greatest of all sires, Defender, and this noted hog was sold by him to McKee Bros, for over $5,000. But while he was at Mr. Mayes' farm he did much for the improvement of this great herd for Mr. Mayes bought the very best bred and best individual animals to mate to him. Some of this offspring are included in this great Mayday sale, others are out of dams by this noted sire, while many of the original sows purchased at long prices to mate to him are included in the offering. These are sired by such noted boars as Superba, The Professor, John's Ohio Chief, Orion Chief, Prince of Cols., Hi King and others, a truly great lot of individual sows and all but one of the sires mentioned are dead but one (Superba). What an excellent chance to get some of the queens that were sired by these great boars while in life. Probably not another chance like it will again be offered. The forty fall gilts and twenty-five fall males by Defender, Superba, John's Ohio Chief, Crimson Col., Cherry Tennessee, Premier Col., Professor Boy and others is another great opportunity to get a choice male pig or open gilt for your coming sales. Don't overlook the yearling open sows. These are a lot of attractions and the catalog tells all about this great offering. We ask for all to attend who can, but you who can't come should send bids to H. E. Browning, field representative of The Homestead. Cols. H. L. Igleheart and C. C. Wheeler, auctioneers. Look up the advertisement on page 28 of this issue and write for catalog to E. S. Mayes, Jr., Springfield, Ky.

Six Yearling Duroc Boars For Sale.

I. J. Wilson, West Branch, Iowa, is offering six good yearling Duroc Jersey boars for sale as well bred as can be found anywhere. These boars will weigh over 300 pounds and will be priced worth the money. Five of them are sired by Wilson's Defender by Defender and two of them are out of a Model Chief dam, two out of a Wonder Boy dam and one out of a Victor Wonder dam. Mr. Wilson has used one of the boars out of the Model Chief sow and his pigs are showing up in good shape. One of the boars out of the Wonder Boy sow won first at the Tipton and West Liberty fairs last fall. There is also one yearling boar by Crimson Wonder I Am out of a Proud Col. sow. Mr. Wilson used this boar on some of his best sows last fall and the pigs have quality and good size. If you want a good yearling Duroc boar write Mr. Wilson mentioning The Homestead. See page 29.

Express Prepaid on O. I. C. and Chester White Pigs.

W. Doolittle, Woodland, Mo., who has bred O. I. C. and Chester White hogs for thirteen years past has from year to year improved his herd until he now has one of the best to be found. The great Frost boars, White Oak and Jackson Chief, were the sires of much of Mr. Doolittle's foundation stock. Later Mr. Doolittle purchased herd boars from Mr. Reece's prize herd and has by proper matings developed a superior type of white hog. He has been decidedly careful in making selections, picking only the very choicest individuals and is careful to weed out all objectionable and inferior stock. Mr. Doolittle has sent breeding stock over a wide territory and the many pleased customers furnish the best evidence of his hogs being the kind that make good. Just now Mr. Doolittle offers spring pigs of either sex to be sent express prepaid at weaning time. This affords buyers an exceptional opportunity to get desirable stock at moderate expense. Note page 29 for Mr. Doolittle's advertisement and if interested order early and get some of these choice white pigs.

Cures Lump Jaw.

Mack's Lump Jaw Cure, a standard remedy which has been advertised in this paper for twenty-three years, is effective in curing Lump Jaw. It is sold by druggists at the rate of $2.00 per bottle. Mack's Colic Cure for horses and for bloat in cattle should be kept on hand at all times. It is sold at the rate of $1.25 per bottle.

It Sold 73 Hogs at Private Sale

HARRY HURLESS is a young breeder of Chester White hogs at Ogden, Iowa. He advertised them in The Iowa Homestead, using one-half inch of space twenty-five times. Did it pay? Read what he says: "I want to thank The Homestead for the good it has done me the past fall and winter. I sold seventy-three Chester White hogs through the advertisement, and could have sold forty more, but did not have them. I will be with you next fall and winter." The big circulation of The Homestead brings returns where others fail. Live stock raisers should learn our rates. Address

HOMESTEAD COMPANY DES MOINES, IOWA.

THE LIVE STOCK MARKET

Union Stock Yards, Chicago, April 26th.—Three consecutive weeks of liquidation of cattle has deprived the beef steer market of its capacity to absorb and created a condition of congestion that borders closely on demoralization. One has to look far in his search for real common-sense reasons as to why cattle that need weeks or months more feed are being shunted to the shambles at this juncture in such reckless fashion as they have been. Several reasons are advanced and all of them have doubtless had their influence in keeping the liquidating microbe busy although the chief one apparently that of alarm in feeders' ranks at the prospect of free meat should not, in the opinion of trade leaders prompt any ordering of cars, for even if meats go on the free list—which they probably will—the crop of beef now nearing the finishing stage could not possibly be affected and it is extremely doubtful if it would adversely affect prices at a subsequent period. Another factor that is at present aggravating matters is the urging weak cattle holders are receiving from country bankers to ship. Still another is a desire on the part of many cattle feeders to be rid of cattle that cannot profitably be turned out on grass. Were the market not on a high basis and therefore less susceptible to adverse surrounding conditions, feeders' alarm would probably be less acute, but when the stock has been laid in as feeders at a high cost, their holders are not inclined to take long chances for experience has taught many that a dollar break, when cattle and meats are high, can sometimes come out of a clear sky.

It is not improbable that many cattle were marketed this week by shippers who figured that activity with oats seeding would keep the other fellow away, and that the midweek run was swelled beyond all expectancy because of the promising start the market made on Monday, and that these conditions, perhaps to a greater extent than those noted in the paragraph above, were chiefly responsible for the overgrown supplies. Be that as it may, the fact remains that there has been a very burdensome supply here and elsewhere and that one prescription can be written that will suit the case in the present emergency. Keep cattle that are not pressing on the market back until conditions clarify. That kind will have no place on the market during the coming week and if receipts are limited to finished bullocks a tonic influence will be in evidence.

BIG SUPPLIES OF BEEF.

Six western markets have received approximately 360,000 cattle during the last three weeks and a supply heavier freighted with beef never showed up within a corresponding period. Both here and at Missouri river markets it has been a run of steers, many of them plucked too soon, but still of beef quality. Killers have accumulated a considerable tonnage of beef and cattle are too high, say dressed beef men to warrant killers doing other than a hand-to-mouth business so that whenever a surplus over current trade requirements shows up declines are certain to follow.

PRICES SHARPLY LOWER.

In an off-hand way, beef steer prices are quoted a flat twenty-five cents lower than last Monday. This depreciation embraces the bulk of the steers, but the decline has not been exactly horizontal. Many fair to good 1,050 to 1,250-pound killers are selling at week-end at $7.60 to $8.25 that show thirty-five to forty-cent declines, a large share of the very good handy and heavy steers selling around $8.35 to $8.65 are the biggest kind of a quarter lower, while the few loads of steers that are regarded as specialties and now are quotable from $8.85 to $9.10 are not to exceed fifteen cents lower. That only light receipts can be digested next week, if further declines are to be averted, is certain.

THIN STOCKERS NOT AFFECTED.

Country demand for stock cattle has not, as yet, been damaged by the hard slump in fat steers, but fleshy feeders weighing from 800 pounds up have sympathized with the fat steer market and close dull at a ten to fifteen-cent decline from a week ago. Some of the best selected feeders look about steady on paper, but country buyers have been getting a better and fleshier class of cattle in the higher price registers than they had access to last week. Demand is strongly partial to cattle with some quality of grazing class and thin 800 to 950-pound steers as well as the best classes of steer yearlings are selling for as much money per pound as fleshy heavy feeders of corresponding breeding quality and salable much more easily. Some of the best stock steer yearlings show strong to ten cents higher than last week. At the weekend a few of the highest class 700 to 1,100-pound steers are going to the country as high as $8.00 to $8.25, but $7.60 to $7.90 is taking very good to choice kinds of about all weights and $7.15 to $7.40 a decent to medium class of stockers, while the common and very plain stockers are clearing slowly at $6.50 to $7.00.

COW VALUES FAIRLY STABLE.

Having been relatively very scarce she stock has been on a more stable footing than steers, but further decline in the major market will affect female cattle adversely. Buyers are all set to trim down cow and heifer values sharply, and are only awaiting an opportunity that a good run of such stock, either from corn-belt territory or from the Southwest would give them to apply the ax. Prices for the rank and file of the butcher she stock are closing only about ten to fifteen cents lower than a week ago at most and buyers assert that 90 per cent of their cow and heifer purchases this week has cost them as much on the hooks as last week. A few loads of fancy yearling heifers sold during the first half of the week as high as $8.75 to $9.00, but they, along with the ripe heavy $7.75 to $8.00 cows are distinctly in the specialty class. Most of the right good to choice fat heifers are now selling at $7.10 to $8.25 and a similar class of butcher cows $6.15 to $7.25 and most sellers quote all of such goods ten to fifteen cents lower than Monday or last week's closing. The cheaper grades have held steady, good canners selling up to $4.50 and a meaty sort of cutter cows $4.85 to $5.10. Bulls are higher than at any preceding time this season, despite the adversities that have overtaken the beef cattle market. A few prime heavy bulls have sold up to $7.75 to $7.85, ripe yearling to $8.00 and heavy, meaty Holstein bologna bulls up to $7.10 this week, while $7.15 to $7.50 has taken the bulk of the butcher bulls and $6.60 to $7.00 a large slice of the medium to choice bolognas. A downward revision of bull prices, as well as of cows and heifer values cannot be escaped unless the steer market recovers. Although dressed veal markets do not appear to warrant it, veal calf trade is on a $1.00 higher basis than a week ago and $1.00 to $1.15 higher than Tuesday of this week. Receipts have decreased somewhat this week, but the week-end bulge that made $9.15 to $9.25 calves out of such vealers as had to take $8.00 to $8.10 here last Tuesday and $8.25 a week ago looks very frothy. Heavy calves are scarce as ever and selling stronger than last week, mostly from $6.00 to $7.00, with choice stock steer calves quotable up to $7.50 to $7.85. Quotations:

STEERS.

Good to ch. heavy calves.... 6.25@7.00

MOST HOGS BELOW $9.00.

An unexpectedly liberal run of hogs at the week's opening, sharp downward breaks in the provision market and a continued narrowing of eastern shipping demand, started hog values on the down grade here last Monday, and the market continued in slumpy condition throughout the first half of the week, showing a decline in three da-s of forty cents per hundredweight. The slump caught many shippers here with hogs that could not be sold for their cost price in the country, and had the customary effect of curtailing loading of swine. Receipts the last half of the week have been light and Friday's market showed a fifteen-cent higher trading basis than at midweek, leaving prices about twenty-five cents lower than a week ago. Eleven markets received 362,000 hogs during the first five days this week, or 30,000 less than a week ago and 63,000 less than a year ago. The year's receipts of hogs to date at eleven markets stands at 7,987,000 against 9,247,000 like period last year. Chicago has received 2,471,600 thus far this year, a decrease of 323,800 from a year ago. Friday's trade closed in healthy condition on the following basis of prices:

Bulk of sales	$8.75@8.95
Mixed, 215 to 250 lbs.	8.70@8.85
mixed, 170 to 200 lbs.	8.80@8.90
Medium weights	8.80@8.85
Light butchers	8.90@9.00
Heavy butchers	8.80@8.90
Light shipping	8.95@9.05
Heavy shipping	8.80@8.90
Heavy packing	8.55@8.75
Rough heavy packing	8.35@8.55
Throwout packing sows	8.15@8.45
Fair to choice light	8.75@8.95
Light-light, 125 to 165 lbs.	8.75@8.90
Pigs, good to fancy	7.65@9.00
Pigs, inferior to fair	6.70@7.50
Boars, poor to good	3.75@4.75
Stags, subject to dockage	8.75@9.25
Government throwouts	4.25@6.25
Government pigs	1.50@3.50

LIVE MUTTONS SELL HIGHER.

Advances of fifteen to twenty-five cents on matured muttons and of largely fifteen cents on fat lambs have been recorded this week, the gain being attributable to moderate decrease in the aggregate marketing, both at western and eastern markets and to anticipation of better acting dressed markets, though the latter expectancy has failed to materialize. At weekend the tone of the trade is slow at this advance and much uncertainty exists as to what may happen next week. However, fewer choice lambs are expected to materialize than arrived this week, as much of the Colorado stock now unloading at nearby feeding stations will be shorn before being sent into the shambles and the supply of choice goods is not expected to prove burdensome. Prospects for a high level May market are bright, as judged from prospective supply figures, but adverse tariff legislation and tightening money might upset the market at this juncture, so that most anything is likely to happen. Only about 150,000 head of lambs are reported back in Colorado and western Nebraska feeders' hands. Feeders in those sections had about 1,425,000 head in their feed lots on January 1st and every shipment has made money, feeders confessing this to have been the most profitable feeding season in their history. Idaho's early lamb crop has been seriously bumped by unseasonable weather and will be later than usual reaching market. The Tennessee crop is two weeks late and a May gap in supply is predicted. The week is closing on the following basis of prices:

WOOLED STOCK.

Lambs, good to prime	$8.65@8.90
Lambs, fair to good	8.25@8.65
Lambs, common to fair	7.75@8.25
Lambs, culls	6.25@7.75
Lambs, feeders and shearers	6 00@8.00
Yearlings, fair to choice	7.15@7.90
Wethers, good to choice	6.85@7.35
Wethers, plain to good	6.25@6.85
Ewes, fair to best	6.00@7.00
Ewes, culls	4.25@5.25
Bucks	5.25@6.25

SHORN STOCK.

Lambs, good to choice	7.65@7.90
Lambs, fair to good	7.35@7.65
Wethers, fair to choice	6.25@6.85
Yearlings, fair to choice	6.50@7.25
Ewes, fair to choice	6.00@6.50
Bucks, fair to choice	4.50@5.50

IOWA WEATHER AND CROP BULLETIN.

The following climate and crop bulletin is issued by the Iowa Weather and Crop service from the central station at Des Moines, for the week ending April 27, 1913:

The past week was, as a whole, favorable for farm work, and over the larger part of the state, rapid progress was made in sowing small grain and plowing for corn. Work was, however, retarded in the northwestern counties by heavy rains on the 23d and 24th, which were followed in all sections by light to heavy frosts on the last four mornings of the week.

About 90 per cent of the seeding has been finished, and the remainder will be completed within the next few days. In the northwestern counties, where the rainfall was the heaviest and field work serious retarded, considerable of the acreage intended for oats will be reserved for corn. The early sown grain is up and shows a good stand. Grass is growing nicely, and in some localities stock is in pasture. Fruit trees are still in fine condition. Plum trees are in blossom in the central districts and all fruit buds are beginning to swell in northern counties. The spring pig crop is reported to be short in many localities and especially where cholera was prevalent last year.

The indications at the close of the week are favorable for rising temperature, and with warm weather corn planting will begin during the coming week. Geo. M. Chappel, Sec. Dir.

A GOOD TYPE OF HOG HOUSE.

(Continued from page 5.)

grain and straw all at hand the job of caring for the animals is a pleasure and consumes less than one-third of the time formerly taken up to perform the same task. No. 7 is the present driveway which is used during bad weather as a feeding place for the hogs.

On the whole this is the best house that we have ever had the privilege to visit and we can easily understand why it is that Mr. Long has the many fine animals we saw on his place. He has realized that only the best is worth having at all and the results obtained have more than justified his opinion.

A curious thing to note is that those same neighbors that were so loud in their belief that he had made a terrible mistake in erecting such a house are beginning "to figure." Yet some of them go on in the same old rut, even when they know that Mr. Long has made a grand success and is pulling away from them with rapid strides. Did you ever notice which of the two types had the barns full to running over, the automobile, fine animals and the other things counted when measuring success?

FOR BOYS AND GIRLS TO READ.

A gold medal to the schoolboy or girl between the ages of ten and fifteen who writes the best composition, not to exceed 800 words, on the repair and maintenance of earth roads, is to be awarded by Logan Waller Page, Director, office of public roads United States Department of Agriculture, Washington, D. C. All compositions must be submitted to Mr. Page before May 15, 1913, and the medal will be awarded as soon thereafter as the compositions can be graded. The composition may be based on knowledge gained from books or other sources, but no quotations should be made.

After many years' experience in dealing with the public road situation of the country, it is Mr. Page's belief that ignorance on the subject of repair and maintenance of roads is as much the cause of their bad condition as any other one factor. It is expected that the competition will bring about a better understanding of the subject of repair and maintenance in the rural districts.

Many children living in the rural districts have experienced the disadvantages of roads made impassable through a lack of proper maintenance and it is expected that their interest in the competition will stimulate greater interest among the parents. Bad roads have prevented many children from obtaining a proper education and have even prevented doctors from reaching the side of rural patients in time to save their lives.

Any child between the ages mentioned, attending a country school, may compete. Only one side of the paper must be written on; each page should be numbered; the name, age, and address of the writer, and the name and location of the school which he or she is attending must be plainly written at the top of the first page. The announcement of the competition has been sent to the superintendents of the rural district. No further information can be obtained from the office of public roads. This announcement should be plain to everyone, and all children will thus start on a basis of equality.

WHAT MINCE-MEAT IS.

For two years the government and the Kansas pure food departments have been trying to determine what constitutes mince-meat for commercial purposes. The Kansas Board of Health beat the government and decided what mince-meat really was. Here is the official definition:

Mince-meat is a mixture of cooked comminuted meats with chopped suet, apples and other fruit, salt and spices with sugar, sirup or molasses, with or without vinegar, fresh, concentrated or fermented fruit juices or spirituous liquors. The meat present is in sufficient quantities so that the total nitrogen of the mince-meat is not less than 50 per cent.

Condensed mince-meat, when mixed with liquid as directed on the label conforms in all respects to this standard except that not more than 2 per cent of flour may be used as a binder. If glucose be used in any kind of mince-meat its presence must be declared on the label using type not smaller than eight point capitals.

Under the ruling mince-meat must contain real meat, and not imitations. Every commercial manufacturer has a mince-meat recipe of his own and all wanted their own adopted, but the board made a standard of its own, to which all must conform.

ARTIFICIAL AND NATURAL INCUBATION AND BROODING.

Have everything ready beforehand and start your hatching operations early in the year.

A well-ventilated cellar is the best place to operate the incubator.

The machine should be operated according to the manufacturer's directions.

See that the incubator is running steadily at the desired temperature before filling it with eggs. Do not add eggs to a machine during incubation.

Turn the eggs twice daily after the second and through the eighteenth day. Cool the eggs once daily, according to the weather, from the seventh through the eighteenth day.

Turn the eggs before caring for the lamp.

Attend to the machine carefully at regular hours.

Keep the lamp and wick clean.

Test the eggs on the seventh and fourteenth days.

Do not open the machine after the eighteenth day until the chickens are hatched.

Eggs saved for hatching purposes should not be subjected to high or low temperatures.

In cold weather place from ten to thirteen eggs under the hen; in warm weather from thirteen to fifteen.

Always test the hen on china or nest eggs before setting.

Given proper care and attention, the

90 HEAD OF SELECT

DUROCS

AT

PUBLIC AUCTION

SPRINGFIELD, KY., WED., MAY 21, '13

The Property of E. S. Mayes, Jr., at the former home of Defender.

Consisting of 40 head of Fall Gilts and 25 Fall Boars

SIRED by Defender, Superba, John's Ohio Chief, Crimson Col., Cherry Tennessee, Premier Col. S and Professor Boy. They are out of dams sired by Defender, John's Ohio Chief, The Professor, Irwin Chief, Prince of Cols., Hi King and other noted Sires.

Several head of excellent yearling sows are offered. (Also aged sows by John's Ohio Chief, Orion Chief, Tiffy Col., and others). These are most excellent sows and are added as attractions. **All Sows Sold Open.** 20 spring pigs out of Orion Chief, John's Ohio Chief, and Tiffy Col. dams sired by Cherry Tennessee, Superior Boy and a son of Duke of Cols. This is **an excellent chance to add some attractions to your own herd, to breed to your own boars. "Everything Immune."** Bids should be sent to H. E. Browning, representing The Homestead. Cols. H. L. Igleheart and A. C. Wheeler aucts.

For catalog address

E. S. Mayes, Jr., - Springfield, Kentucky.

May-22, 1913

Waukesha County Guernseys make good. They are bred for production and as represented.

A GREAT SALE OF GUERNSEYS

Eighty high class registered young Guernseys will be sold in our fourth annual consignment sale. Write for catalog to-day, mentioning this paper. Frank E. Fox, Secretary, Waukesha, Wis.

Waukesha, Wisconsin

hen is the most valuable incubator for the farmer.

Use insect powder freely to exterminate lice.

If several hens are set in one room, it is desirable to confine them in good nests.

Straw and hay make good nesting material.

Broody hens should be moved to the permanent sitting nest at night.

Whole corn is a good feed for sitting hens. Water, grit, and dust baths should also be provided.

All eggs should be tested by the seventh day, which often makes it possible to reset some of the hens.

Toe-mark the chicks as soon as they are hatched. This enables one to tell their ages later.

Powder the chicks occasionally during the first eight weeks.

Start the brooder a day or two before putting in the chicks to see that the heating apparatus is working properly.

Brooder lamps should be cleaned every day.

A record should be kept of each hatch, showing the date set, number and kind of eggs, number tested out, and the chickens hatched.

Chicks should not be fed until they are thirty-six hours old.

In cool weather ten to thirteen chicks are sufficient for one hen, while in warmer weather fifteen to twenty can be cared for successfully.

Never mix chicks of different ages.

The coop for hen and chicks should be well ventilated, easy to clean, and of sufficient proportions to insure comfort.

The early hatched pullet is the one that begins to lay early in the fall, when eggs are high in price.—(U. S. Bulletin).

THE STANDARD METHOD FOR PRESERVING EGGS.

To the Editor of The Homestead:

Every poultryman and every farmer's wife has a favorite method for keeping eggs fresh, but when subjected to the severest tests only about two methods have proven reliable, and of these two the one which has given most satisfactory results is preserving in a solution of water glass. This is the method used almost exclusively by European poultrymen and dealers.

In all cases of egg preservation, by whatever method, success depends upon the condition of the eggs when they go into preservation. A stale egg cannot by any possibility be preserved in the spring so as to come out in the autumn a fresh egg. But strictly fresh eggs properly preserved in the spring are considered by many quite the equal of freshly laid eggs when used the following autumn and winter. An egg laid during the cool spring weather is better than the egg laid in July or August.

The eggs should be perfectly clean and unwashed. They should have strong, perfect shells. They should, when possible, be put down the day laid. Only the honest, conscientious farmer and poultryman who looks after his hens and the egg supply daily can insure these requirements, for they know absolutely that the eggs they put in this preserving solution are fresh, and therefore they have an advantage over the packing house people, cold storage companies and wholesale egg dealers in the cities.

Silicate of sodium or potassium, known as water glass, is a soluble alkaline substance that may be had in either liquid or crystalline form. The former, which is of sirup-like consistency, is considered the better for egg preserving. It is inexpensive, the cost averaging about one cent per dozen. A pound costs from ten to fifteen cents, and will preserve about fifteen dozen eggs. Many different proportions of water glass in solution have been tried, but there is a pretty general agreement that 10 per cent strength is the best; that is, one pint of the liquid to nine pints of water.

Use any large vessel other than metal, but it must be one which will not leak or permit evaporation, and which can be tightly closed. A large stone crock or a wooden keg with tight lid is good. The vessel should be scalded and sunned before using. The least scent or taint about the vessel used will affect the eggs. The eggs should be packed each day as gathered, small end down, and as each layer is completed it should be covered with water glass solution, and so on till the vessel is full, when three inches of the solution should cover the top layer. Keep a tight lid on the vessel, and set it in a cool, dark place, care being taken not to disturb them, for this will break the crust that forms over the top. If the water evaporates or dries away, boiling water must be added, or a sediment of the water glass will settle to the bottom and cement the lower eggs together.

When the eggs are required for use or for sale take out the quantity desired, and a new crust will form over the remainder. The eggs should be well washed in cold water before they are sent to market or cooked at home. Those taken out for home consumption should be kept in a cool place till used. If boiled in the shell the shell must be punctured with a needle to prevent bursting.

J. H. Motes.

GOOD PRICES FOR HORSES.

Those who believe that motor cars are driving the horses out of the country will be interested in the report of a sale in Chicago of a string of horses from Kansas. The report shows that the Kansas horses, disposed of mostly at retail, brought high prices. One pair of big grays went to a New York firm for $775. A pair of browns, a mixture of Shire and Percheron blood, sold for $685. The lowest price obtained for any of the horses sold by one breeder was $312.50. Pairs of good farm mares went for $440 and $450. Even the light driving sorts were in better favor, and anything desirable for city or town use was in instant demand. Feeders, by which is meant big horses in only feeder condition, went as high as $600 a pair, but not to be fed out and returned to market.

In the United States the average number of acres of land cultivated by each person engaged in farming is forty. In Germany it is under ten.

HIGH PRICED CATTLE

CAN be saved by using Mack's Lump Jaw Cure, the standard remedy for 23 years. Easy to apply, sure to cure or your money back. $2.00 at druggists' or delivered. Try Mack's Colic Cure for horses and bloat in cattle. You will keep it on hand if you do. $1.25 at druggists' or delivered. Free book.
Mack Bros. - - - Spencer, Iowa.

TOO LATE TO CLASSIFY.

POLAND CHINA SWINE.

W. H. COOPER, LIVE STOCK AUCTIONEER

WE maintain one of America's greatest herds of strictly big-type Polands with big-type blood lines. We have in connection with it, one of the most complete plants for the business known. Twenty sows in our herd average over 650 pounds each including several yearlings.

50 HEAD OF BRED SOWS AVERAGED $65.00 in our February 4th sale, mostly gilts. We are booking orders now for June delivery, gilts and boars of this spring's farrow, at $20.00 and $25.00 each, out of these sows, which are of the biggest blood lines known, and sired by our big herd boars, including the great Big Expansion, weighing 800 pounds at two year old, and Big Bone 2d, and other boars of like breeding. Can furnish boars and gilts unrelated. Guarantee everything as represented or it may be returned and money refunded. Everything recorded free to purchaser.

LEWIS and ATLANTIC, IOWA,

BREEDERS and IMPORTERS

PERCHERON AND SHIRE STALLIONS AND MARES

One importation arrived October 25 and are now offered for sale. These are the best lot of horses that have crossed the Atlantic this year. Another importation now on the road. Write or come and see our horses.

Hart Bros.

Osceola, Iowa

Our **1912 importation** now in our stables. A high-class lot of imported **Percheron, Belgian** and **Shire stallions** and **mares.** Come and see them.

PHERCERON and BELGIAN STALLIONS and MARES

IMPORTED and Home Bred. High-class horses on hand.

CALL AND SEE US.
E. H. Knickerbocker & Son
Fairfax, Iowa.

SHIRE AND PERCHERON STALLIONS AND MARES

IMPORTED animals that have been over long enough to be fully acclimated and in thrifty condition, good horses with show quality at reasonable prices. We can suit critical buyers and invite personal inspection. Will meet buyers at C. R. I. & P. or Interurban Ry. if notified. H. P. Wilkinson & Bros., Mitchellville, Ia.

Percheron Stallions

Bargains for late buyers.
Stallions from yearlings to 5 yr. olds
Size, breeding and quality right.

L. A. Matern, Wesley, Iowa.

DON'T WASTE TIME

EVERY spring your mares drop inferior colts you lose one more year of time in which to breed the stuff that pays. There's profit in Percherons because they are what's wanted. Don't delay. Investigate now. I'll put my time against yours to prove you should.

Purchase Percherons.

Address or call upon me freely. Wayne Dinsmore, Sec'y Percheron Society of America, Union Stock Yards, Chicago.

BELGIANS, PERCHERONS

HOME-BRED, registered Belgian stallions; home-bred, registered Percheron stallions and mares. Also standard bred, both sexes.
E.P.HAMILTON & SONS,
Garden Grove, Decatur county, Iowa. R. F. D. 2. 23 miles south west of Chariton.

PERCHERON STALLIONS

SOME bargains in Percheron stallions, ages ranging from yearlings to five year olds. Good propositions on both quality and prices. Address.
L. A. MATERN, WESLEY, IOWA.

Palestro I. 52027 (67506) will make the season of 1913 at my farm 2 mi. east of Garner, Ia. Palestro I. is a black sired by Mon Jarret (47526) by Theudis, by Besigue, by Brilliant III. and dam traces to Brilliant III. Write for terms. Henry Moll, Garner, Iowa.

IMPORTED BELGIANS

I recently returned from Belgium with another importation of stallions and mares. I have over 40 head of big, drafty, heavy-boned stallions and mares that will be priced right. Farm near town. Write me, mentioning The Homestead.
R. F. FRENCH, INDEPENDENCE, IA

VAN STEENBERGE'S DRAFTERS

40 **HEAD** Belgian and Percheron stallions now on hand. Imported and American bred to offer. New importation of big, heavy drafters just arrived.
A. M. VAN STEENBERGE,
OGDEN, IOWA

STALLIONS

Home-bred draft stallions $250 to $650. Guarantee to sell you imported stallions for less money than any firm in America. Come to a live stallion market and see all draft breeds. A. LATIMER WILSON, Creston, Iowa.

READY FOR BREAKFAST

Absolute Comfort for the Motorcyclist!

The **Indian**

Motocycle for 1913

includes in addition to the **Cradle Spring Frame**

ten important new features. There are besides no less than twenty-nine new minor features. We call these "refinements"—not improvements.

Another important comfort point of the 1913 Indian is the equipment of Foot Boards in addition to pedals. The latter are in reality fitted only for the purpose of starting the motor, similar to cranking an automobile. Once started, the rider has the choice of two comfortable riding positions, with absolute control of the machine assured in each.

Prices: { 4 H. P. Single, $200 / 7 H. P. Twin, $250 } f. o. b. Factory

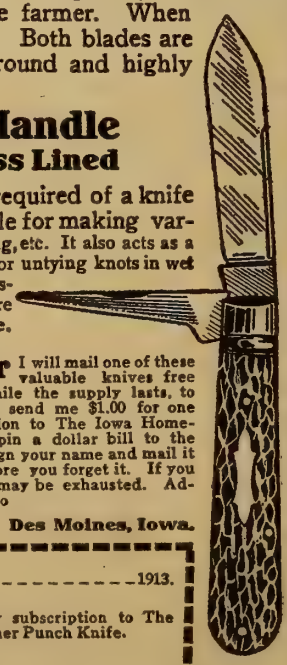
THIS KNIFE COSTS MY READERS NOTHING

You have read about the famous Leather Punch Pocket Knife—the knife that is called the "Marvel of Mechanical Ingenuity"—the only knife that was ever made especially for the farmer. When opened it is six and one-half inches long. Both blades are of finest tempered tool steel, perfectly ground and highly polished. The knife is complete with



Best Quality Stag Handle
Securely Riveted and Brass Lined

The large blade fills every common use required of a knife while the leather punch blade is indispensable for making various sized holes in leather for buckles, rivets, belt lacing, etc. It also acts as a swedging awl or marlin spike when turned to the left. For untying knots in wet rope and hard leather this blade has no equal. While possessing all these valuable features, the knife is no more clumsy or awkward to carry than an ordinary pocket knife.

My Guarantee I am so sure that this knife is all I claim for it that I am going to place a gilt edge guarantee on it. Send me $1.00 for one year's subscription to The Iowa Homestead. I will mail you a knife free. Try it for ten days. If it is not just what I claim it to be, you can return it to me and I will refund your money. You take no chances.

My Offer I will mail one of these valuable knives free and prepaid, while the supply lasts, to anyone who will send me $1.00 for one year's subscription to The Iowa Homestead. Simply pin a dollar bill to the coupon below, sign your name and mail it to me today before you forget it. If you wait my supply may be exhausted. Address all orders to

How One Farmer Keeps His Boys at Home.

MR. VANQUIST has been successful in keeping his boys at home; in interesting them in the farm work until they enjoy doing their share of it. In frequent instances his neighbors' sons have left the farm as soon as they grew up, leaving their parents to hire help if they could find it. Mr. Vanquist reasoned it out that when a young man preferred to leave home and work for a stranger instead of staying on his father's farm something was usually wrong with the parents' methods, providing, of course, that they owned enough land to make their son's residence on the farm profitable. If his labor is profitable for a stranger to hire, it seems that it would be doubly profitable to utilize this labor in his own and his father's interests. He would then save himself from the not-to-be-envied life of a farm hand, at the same time relieving his parents from the embarrassment of searching for help. Mr. Vanquist once explained his methods to a farmer friend, who was desirous of learning them so he could put them in practice. Said Mr. Vanquist:

I have always had a deep interest in the welfare of my sons; I have always felt myself partly responsible for their future. I have three sons. They range in age from twenty-three to twenty-nine. Not one has ever left the farm with the intention of staying, and I have never heard any of them express a desire to leave. They have been perfectly satisfied with their lot; although in this connection it is only reasonable to judge that they were born farmers.

When the oldest of the boys was large enough to begin work I owned 160 acres of land. Today my boys and myself own a good deal more. The elder of my sons did not receive as good a common school education as he probably should have. The other two, the younger especially, were more favored in this respect. My oldest boy's name is Henry. When Henry was nine years old he began to be anxious to help me do the farm work. Instead of discouraging him by laughing at his offers of assistance I took great pains to encourage him, and I always rewarded a particularly industrious spell on his part by giving him a nickel or a dime. He had a little savings bank and kept his money. I am not going to tell you that he saved enough this way to get a start in life. The sum total was small, but it helped to instill the business sense in him.

Five years later Henry was working by my side like a man. We drew up partnership papers together. We invoiced all the stock on the farm and I signed up that he was to have one-tenth of the net income to reimburse him for his work. This business-like method pleased him immensely. Other boys about his age or a little older were growing more and more discontented with home life, and were planning to "break loose" when the opportunity came.

For the next six years Henry and I farmed together under that contract. Each year we figured up his tenth of the profits and he deposited it in the bank. Of course, he did not have to buy his own clothes. I did that. During these six years, being in a receptive mood and eager for information concerning the different kinds of farm work, Henry learned to be a first-class farmer. He took an interest in his work, and farming is just like everything else, to succeed one must have interest.

The spring Henry was twenty-one we readjusted our arrangements. I had purchased an additional 160 acres. Eighty acres of this was pasture, the other half was plow land. We added up Henry's money in the bank and found that the six years of work had netted him $380. This sum was sufficient to buy a good team, and Henry purchased a pair of draft mules. Mules were cheaper then than now, and he got a fine team of four year olds. He has them yet, for I never have encouraged my boys to trade, buy or sell horses and mules more than is absolutely necessary, for I think when a man gets used to a good team it is better to keep them.

From now on Henry was to have one-third of the net income off the farm, and the money he received was to be applied on a real estate purchase. He was eager to acquire an eighty of his own, and I was anxious for him to. We had plenty of horse power for our present uses and we kept things moving. My two younger sons were seventeen and eighteen, respectively. They had not been receiving any percentage of the profits, but the spring Henry was twenty-one I thought it was time the youngsters were getting interested in the farm, so they became partners and I signed up to give them one-eighth of the net income. They intended to save their money and invest in calves and chickens. Henry's hobby was hogs. The four of us working together enabled us to handle a large acreage of grain, and besides we raised and fed as many cattle and hogs as possible.

We kept this up for another two years; then I drew a new contract with my second son. The sum to his credit at the bank was sufficient to purchase ten heifer calves. He was going to apply the percentage he got in the future to paying for an eighty which I had purchased with the intention of selling to him on the easy-payment plan. I wasn't well enough fixed so I could afford to give each of my boys a farm outright as some men are able to do. In some cases I doubt if giving outright is a very good method. A young man appreciates property more if he earns it by his own efforts.

Before the younger boy was twenty-one he started out in the poultry business. I furnished him the ground for his yards and chicken houses, and supplied him with the land to grow his feed in return for his assistance with the general farm work. He raised a good deal of his grain—milo maize and kaffir corn—on patches of ground which were not overly profitable for other varieties of grain. His poultry business soon netted him a fair income. He grew quite proficient in the management of incubators, usually bringing off hatches that equaled any in the country. All my sons learned the art of managing special kinds of farm work early in their lives by having an interest of their own in the undertakings.

With Henry raising hogs, my second boy keeping heifer calves until they grew into cows, the youngest boy running a complete poultry business, and the four of us working together at the general farm work, such as raising corn, wheat, oats, alfalfa, etc., necessitated quite a little labor in keeping account of and listing the different expenses and gains of each separate transaction. Each of the boys was paying for his land and other property. I had my own personal business transactions to care for; so we had to be careful to keep accounts straight.

We saw we needed an office of some kind, and as we had a small bed room in the house which we never used we fixed it up a little and made an office of it. We didn't furnish it especially fine, we just had a good, serviceable desk, a rebuilt typewriter which I bought of an agent, a small filing cabinet to keep our catalogs, registered stock pedigrees, etc., from getting mixed up with unimportant stuff. I already owned a little safe in which I kept our land deeds, insurance policies, etc.

Each of the boys had his separate account books—we did no elaborate bookkeeping—and regularly every month we figured up to see how we were progressing. We aimed to balance things so we would always have enough stock on hand to consume the corn and alfalfa we raised. Of course, if we hadn't kept an accurate account of our transactions we wouldn't have known what each of our shares amounted to at the end of the year, and the result would have been a jumble at settling time, and probably would have been the cause of considerable dissatisfaction.

None of us are very sporty, but we try to have a little amusement now and then. Nearly all normal boys and men like to go to shows and other wholesome amusements. The town within seven miles of us has a good moving picture show and the boys drive there frequently evenings when the roads are good. No one who has not passed through the long silent days on the farm can realize the pleasure and relaxation a little moving picture show can give. Lots of boys would stay on the home farm if their parents sympathized with their desire to go out in the evenings occasionally and have a little fun. Each of my boys has his own driving horse.

We like to read and my sons and myself subscribe for all the good farm papers, a good daily and some fiction magazines. My sons have never attended college, but I think they are about as well informed and are as good farmers as the average college man.

I have noticed that the introduction of modern machinery has done a share in keeping boys on the farm. Progressive farmers have found that it is not profitable to have their own sons or their hired help fooling with some old-fashioned piece of machinery which has been superseded by one with which much better results can be obtained. The labor of operating the new kinds of machinery is greatly lessened. The hay loader has saved the farmer from the strain of pitching heavy alfalfa all day under a hot sun. The stackers have greatly simplified stacking hay of all kinds in the field. All of these modern machines will pay for themselves in a short time; because they are instrumental in putting up a crop in a hurry, often saving it from getting wet in a summer shower.

Having good silos, hay barns and handy accommodations for cattle and hogs saves the boys from having to haul feed all day in a blizzard, and prevents them viewing the discouraging spectacle of a herd of shivering, stupid cattle, with snow resting on their backs.

I let my son Henry fix up for hogs in the way that suited him. He built a fine hog house. It has a driveway in the center and the stalls are on both sides. When the building needs cleaning out all we have to do is to drive in the manure spreader and load up. I think that boys who have the opportunity to use manure spreaders take a much greater interest in hauling manure than those who have to use the tiresome method of handling it with a fork.

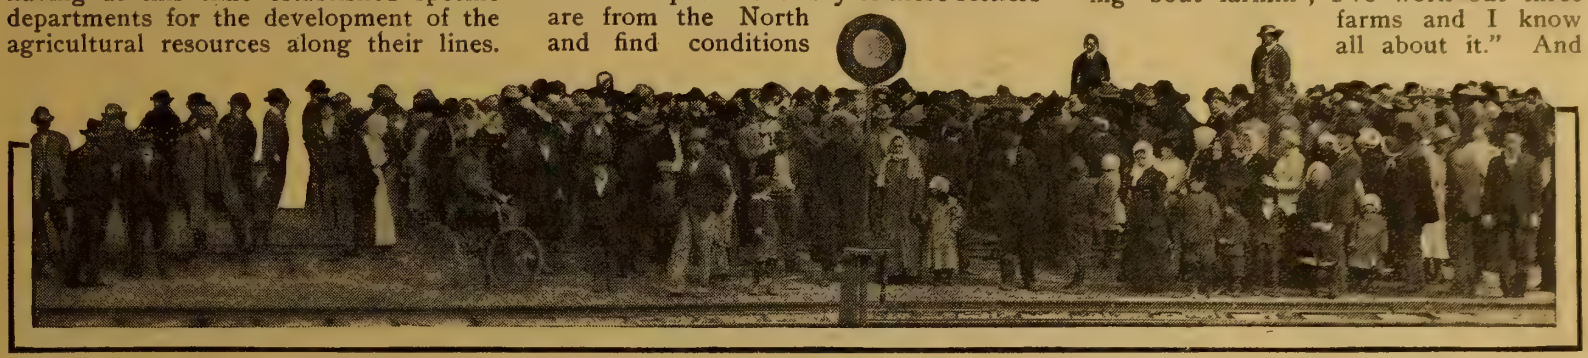
The Iowa Homestead

DES MOINES, IOWA, THURSDAY, MAY 8, 1913.

How the Agricultural Commissioner Helps

A New Phase of the Co-operation Between Railroad and Farmer, Which Means the Profit of Each, Told by W. R. Beattie, Agricultural Commissioner of the Cotton Belt Railway.

NOWADAYS everybody is getting interested in the agricultural welfare of our country. The railroads were among the first of the large interests to recognize the influence of agricultural development and their example has been followed by many of the large commercial enterprises. It is only within the past few years, however, that any definite plan for the agricultural development of the territory contiguous to the various railways has been followed, and at first the work was handled by the traffic departments. The position of railway agricultural commissioner is a comparatively new one, only a few companies having at this time established specific departments for the development of the agricultural resources along their lines.



WAITING FOR THE COMMISSIONER AND HIS DEMONSTRATION CAR IN ORDER TO LEARN BETTER FARMING METHODS.

One of the large railway systems of the South now maintains a department consisting of about thirty men who are working for the general improvement of farming conditions. This work is conducted in close connection with the United States Department of Agriculture, Farmers' Co-operative Demonstration Work; many of the men engaged in the work for the railway have been drawn from the government demonstration work; in fact, the United States Department of Agriculture is serving as a training school for the preparation of men who can fill the positions now being created by the various railways in the line of agricultural development.

The duties of the position of railway agricultural commissioner embrace everything pertaining to life and work on the farm, also the relation between the farmers and the transportation companies and marketing problems. Taking as example the railway of which the writer is the agricultural representative, the work is primarily one of an educational nature, "helping the farmers to help themselves," and includes everything pertaining to the agricultural development of the territory served by the company he represents. In addition, the successful agricultural commissioner must be something of a booster and a good publicity agent. The time has come when the farmers themselves are no longer content to go along in "the same old way," and they are seeking reliable information. A comparatively small per cent of the people who live upon the farm have the opportunity of attending college, and if they are to become proficient in their line of work an education must be carried to them. Often, however, the tiller of the soil is self-satisfied and indifferent to modern ideas of agriculture and before he can be taught must first be interested. It is often difficult to get the farmer to understand that the interests of the railway and his own are mutual and that the progress of either is dependent upon the other.

The object of any transportation company in the maintenance of an agricultural department is to develop its territory and to create traffic, both freight and passenger. Many of the railways, and especially those in the South, pass through sections where there is yet plenty of cheap and fertile farming lands, and there is a constant stream of emigration from the more thickly settled districts to these cheap lands. Many of these settlers are from the North and find conditions that are very different from those to which they have been accustomed. In cases like this a visit from the agricultural commissioner of the railway, or one of his assistants, is often the means of getting the newcomer on the right track and headed toward prosperity in his new home. A little later Mr. Newcomer writes back to his friends and neighbors. One by one they follow him and soon there is established a whole new community. An occasional visit on the part of the railway's agricultural representative helps to keep up the interest of these people, and sooner or later the results begin to show the form of traffic returns. It is in this personal contact that the greatest and most satisfactory results are obtained.

It is often necessary, however, to resort to more general methods for reaching the mass of farmers along the line of the railway, and for this purpose special agricultural trains are sometimes employed. These trains are generally conducted in co-operation with the various colleges and experiment stations of the states through which the road operates. Very often men from the United States Department of Agriculture accompany these trains and give lectures. The talks or lectures upon the various crops and farm problems are the main feature of the work undertaken on these trains. However, exhibits of various kinds are often included as illustrations of the lectures. In the conduct of these "agricultural schools on wheels," the object is to sow the seed which starts the farmer thinking and to prepare the way for more definite work along special lines.

The persons who accompany these educational trains have some novel and often amusing experiences. At nearly every stop there are a few who "have to be shown," and these generally hang around the outer edge of things generally. On one occasion the writer approached one of those who remained outside while a talk on soil fertility was being given in the lecture car and asked the question, "Why do you not go in and hear what the speaker has to say?" The reply came very promptly, "You can't learn me nothing 'bout farmin'; I've worn out three farms and I know all about it." And then there is nearly always the "whittlers," who stand over by the depot or sit upon a baggage truck and whittle, making mostly just shavings. One of these was heard to remark, "I would go in if I thought he could tell me how to fool some sucker on a horse trade." It is gratifying to note, however, that the majority of the farmers and their wives come to hear, to see and to learn.

The tour of the train invariably brings to light many problems and weak points in the farming methods of the various localities, also opportunities for the development of special farming industries. It is a well-known fact that enough goes to waste on many farms to feed several people if it were cared for. Recently the United States Department of Agriculture,

BELIEVES IN DRY FEED FOR PIGS.

The following communication from one of our subscribers, Mr. Chas. King, of Hanson county, South Dakota, deals with a subject in which corn-belt farmers are vitally interested:

I have been much interested in the different methods given for handling and caring for the young pigs. The main thing for which we are striving is to get the pigs ready for market in the cheapest, quickest and the most economical way.

Where twenty-five or thirty sows are bred I think it is best to have two males. We have 100 pigs, the oldest ten days old and the youngest four. I am feeding ear corn together with corn, oats and rye, ground in equal parts. Have a self-feeder for the ground feed where the little fellows can learn to eat with the sows. No slop is fed, as we think the dry feed is much better, especially in a self-feeder where they can get it as often as they like. Then there is no danger of gorging or overloading their stomachs like there is on slop.

When the pigs are four to six weeks old we will fill our sixty-bushel feeder with the ground feed (composed of corn, oats and rye) supply a self-waterer from a large tank and our pig feeding is done until the feeder is empty. Also in about four weeks we shut the sows away from the self-feeder and give them corn and pasture, and by October 1st the sows will be ready for market. We have had pigs 150 days old weigh 187 pounds, or a gain of one and one-fourth pounds per day.

Another advantage is that the young sows at farrowing time weigh from 250 to 350 pounds. At that size I consider that they are equally as good as old sows and not so apt to lie on the pigs as older sows.

This method of feeding saves an enormous amount of labor in a season when as many as 100 shoats are fed, and certainly the weights attained by Mr. King are fully up to the very best results that can come from slop feeding. We would call special attention to the mixture of ground feed that is being fed in this case, namely, equal parts of corn, rye and oats. This makes a ration that is palatable and it is one in which the feeding elements are almost perfectly balanced.

If there are others among our subscribers who have had success in feeding dry feed alone, or if there are those who have tried it out and have failed we shall be glad indeed to have their plans outlined for the benefit of all our readers.

THE BEAUTIES OF NATURE.

The celebration of Arbor Day in the various states calls attention to a phase of country life all too apt to be overlooked in the hustle and bustle of making a living by farming. That phase is the non-practical, the idyllic. All too many people living in the country are prone, at times, to think their life humdrum, to yearn for the bright lights and the noises of the city; overlooking the fact that the greatest riches and beauties of life are theirs not merely for the asking, but for the accepting. It is a good thing to celebrate Arbor Day, for it quickens the interest of the young and it reminds the old that there are beauties and riches of nature which must be listed with the other assets of country life.

We cannot commend too highly the spirit which permeates most of the Arbor Day proclamations issued this year. We do not remember, in several years, to have seen a more artistic arrangement of Arbor Day sentiments than are to be found in the booklet issued by the department of public instruction of Iowa. The place of honor is given to the proclamation of the governor, who shows that he is imbued with the spirit of the day by quoting John Ruskin: "While I live, I trust I shall have my trees, my peaceful, idyllic landscape, my free country life—and while I possess so much, I shall own 100,000 shares in the Bank of Contentment." Isn't this a sentiment to cheer one up on a dull day and show how full of riches this poor old world is, after all?

With such an introduction this particular Arbor Day proclamation proceeds with these words of the governor: "How we love the trees that sheltered our childhood. Some of the finest, sweetest memories of life are there. The tree that we planted with our own hands many years ago, now strong against winter storms and beautiful in summer sunshine, what a sense of proprietorship and inexpressible comfort we have in it." Here is a sentiment above and beyond all politics and factionalism, a sentiment in which the country dweller should be able to agree with a spontaneity not possible to the city man.

Nor does the sentiment stop here, for while the governor is thus apostrophizing nature, the state superintendent of public instruction bursts thus eloquently into prose:

How blind are we to Nature's efforts to make this world a pleasant place in which to live! We trample the grass and the flowers under our feet; we pass the trees without observing that one differs from another just as races of men and individuals differ. We do not hear the songs of the birds and so we miss much that might gladden life's pathway.

If Arbor Day had no other value than to quicken interest in the beauties of nature in those who are asleep to these beauties too much of the time, it would be well worth while, but there is not an Arbor Day which does not find many thousands of trees planted, of an economic value untold. It was a brilliant inspiration, this Arbor Day movement, and deserves to be helped along by every man, woman and child. It is uplifting and inspiring; as well worth while as anything of which we can think.

DO LIGHTNING RODS PROTECT?

The Ontario Agricultural College has carried on a somewhat extensive investigation to ascertain the protective value of lightning rods on farm dwellings and outbuildings. Part of this work of investigation was carried on in connection with insurance companies and the data obtained has been largely secured from this source. Eight of these companies were all that were able to furnish reports complete in every particular.

Although the first six companies insured 5,614 barns, the number rodded being 1,538, which makes 27.4 per cent, twelve barns were burned, among which there was not one that was rodded. These same companies had seventy-two barns damaged, of which one was rodded. Five companies insured 4,023 houses, the number rodded being 592, which makes 14.7 per cent. Three houses burned, of which none were rodded, and thirty-four were damaged, of which one was rodded. The last two companies insured 1,008 barns and houses combined, the number rodded being 122, making 12.8 per cent. These two companies had four building burned and ten damaged, with not a rodded one among them. Taking the whole eight companies together they insured 10,644 buildings, the number rodded being 2,252, which makes 21.1 per cent As these companies renew their risks every three years, the total number of rodded and unrodded buildings insured is probably about three times the figures just given. They had nineteen buildings burned, of which one was rodded. Adding the burned and damaged buildings together we see that these companies had 135 buildings struck by lightning, of which only two were rodded, which makes 1.5 per cent.

Of the buildings insured by these companies last year 21.1 per cent were rodded. This may be taken to represent fairly accurately the percentage of rodded buildings in the territory covered by these eight companies. If the rods had no effect one way or the other, we would expect that 11.1 per cent of the buildings struck would have rods on them. For every seventy-nine unrodded buildings struck we would expect also to find twenty-one rodded ones struck and for 133 rodded, thirty-four rodded ones would be due to be struck, but only two were actually struck. Are we not justified, the author of these investigations asks, in saying that in all human probability the rods prevented strokes on thirty-two out of thirty-four rodded buildings?

Or, looking at it another way, out of every 7,000 unrodded buildings insured by these eight companies thirty-seven were struck by lightning, while out of every 7,000 rodded ones only two were struck, therefore unrodded farm buildings are more than eighteen times as likely to be struck by lightning as rodded ones.

INTENSIVE FARMING ABROAD.

The extent to which intensive farming is being carried on and is proving successful in foreign countries is strikingly shown by a French magazine writer. He tells of a French woman who, toward the end of October, 1911, planted one grain of barley. As soon as the young plant protruded from the soil it was earthed up with care and produced fifteen stalks. In February and March, 1912, two new earthings produced ninety-nine stalks. By May 12th the single grain had produced 212 stalks and on June 10th there were harvested 236 stalks, 212 ears and 5,300 grains.

Encouraged by a yield of 530,000 per cent the French woman tried her experiment on a tract two and one-half acres in extent. The last report available is dated last December, and is to the effect that from the planting of one grain in a space eighteen inches square there have sprung 20,000 clumps, each of twelve to fifteen stalks, which will be correspondingly multiplied with the coming of spring.

Even more striking results, although achieved by a method obsolete and impractical so far as American adoption is concerned, are reported from China, the French writer telling the story thus:

The Chinaman after furrowing the earth with his wooden plowshare, without turning it, crumbles each lump in his hands till it is like fine powder. This done, at planting time he walks slowly down each furrow carrying a grain drill which is a marvel of ingenious simplicity.

Picture to yourself two-pointed plowshares about twenty inches apart and connected by a transverse bar supporting a hopper filled with grain, from which issue two slender bamboo tubes designed to conduct the grains so that each will drop in the wake of one of the shares. The diameter of each tube is just great enough to allow the passage of one grain at a time without letting it drop until it receives the impulse of a slight shock given by means of the handles which complete the apparatus.

The sower pushes the drill in front of him, inclining it now to the right and now to the left, in such sort that each inclination causes the issue of a single seed, which is instantly pressed under by the track of one foot or the other. The seed plot is thus made in the form of a "quincunx," each planted grain being at a distance of sixteen to twenty inches from its neighbors in every direction.

At the end of a few weeks germination begins. When the young plant is ten or twelve inches in height, there are a score of stalks about its stem each provided with a fringe of rootlets. The farmer covers each with loose earth by means of careful hoeing, thus raising the level of the furrow. Each stalk again proliferates, and there are soon fifteen to twenty new stalks around its stem, which detach themselves. All are the indirect issue of a single grain, which proves therefore to have been the parent of 300 to 400 stalks, each bearing an ear.

Transferring this method to experimental fields and perfecting it, it has been found possible to separate from the stem each of the primitive stalklets with its own roots, transplant it, and then treat in the same way each of the new plants thus formed.

Thus Philippe Miller planted a seed in the experimental gardens at Cambridge in June, 1776; in August, 1777, he obtained as a harvest from this single seed 576,000 seeds. For unknown reasons the experiment was not repeated until June 12, 1903. On this date our own compatriot Bellenoux treated in this manner twenty grains of wheat planted in one square yard of carefully mellowed earth. On August 9th he separated and replanted the numerous stalklets springing from the earth. On October 8th of the same year, then on March 3d of the next year and finally on May 13th he repeated the operation. On July 30, 1904, each of his twenty grains had produced 604 clumps bearing 28,388 ears, containing a total of 709,701 grains. This prodigious harvest corresponds to a yield of nearly three tons to the acre.

The various commissions which the United States and the separate states are sending abroad to study agricultural conditions will find much of interest, and of possible profit, in the study of intensive farming operations. This is not to say that all these practices could be successfully followed in America, or that conditions are similar enough here to warrant all being tried. But that more interest is being taken in intensive farming in this country and more converts are being enrolled every year is an indisputable fact. The southern rice grower, on his dry uplands, is reaping a larger harvest than the Oriental, with all his transplantings and intensive cultivation. Conditions are so different, however, that comparisons are odious and unjust. American agriculture may well afford to study foreign methods, for some of them are practical and all are interesting, to say the least.

NEW IOWA WEIGHT LAW.

Numerous requests have been received from subscribers for particulars of the new weight and measure law passed by the recent Iowa legislature and already in effect. The new law fixes the correct weight of scores of commodities and requires the retail dealer to sell by weight, rather than by loose measure as heretofore. Only the berry merchant is exempt, for the time being, from the operations of the new law. Because many merchants had stocked up with berry boxes, which are of short weight, before the law was passed, it was decided to defer operations in this particular until October first. After that date, however, berry boxes which contain less than a full pint, half-pint or quart, by interior measurement, will be confiscated and the short-weight dealer prosecuted.

Official Iowa weights for various stuffs that come under the new law are as follows, the number of pounds being for the bushel:

Apples	48
Apples, dried	24
Alfalfa seed	60
Barley	48
Unshelled green beans	56
Dried beans	60
Lima beans	56
Beets	56
Blue grass seed	14
Bran	20
Bromus inermis	14
Broom corn seed	30
Buckwheat	48
Carrots	50
Caster beans, shelled	50
Charcoal	20
Cherries	40
Clover seed	60
Coal	80
Coke	40
Field corn on cob	70
Unhusked field corn	75
Shelled field corn	56
Cornmeal	48
Cucumbers	48
Emmer	40
Flax seed	56
Grapes, with stems	40
Hemp seed	44
Hulled hickory nuts	50
Hungarian grass seed	50
Kaffir corn	56
Lime	80
Millet seed	50
Oats	32
Onions	52
Onion top sets	28
Onion bottom sets	32
Orchard grass seed	14
Osage orange seed	32
Parsnips	45
Peaches	48
Dried peaches	33
Peanuts	22
Pears	45
Green unshelled peas	50
Dried peas	60
Plums	48
Popcorn on ear	70
Shelled popcorn	56
Potatoes	60
Quinces	48
Rape seed	50
Redtop seed	14
Rutabagas	60
Rye	56
Salt	80
Sand	130
Shorts	20
Sorghum seed	50
Spelt	40
Sweet corn	50
Sweet potatoes	50
Timothy seed	45
Tomatoes	50
Turnips	55
Hulled walnuts	50
Wheat	60
Unspecified root crops	50

There has been much complaint in the past because of retail dealers buying produce from the farmer by weight and selling it by measure, with the result that the city buyer was cheated in the amount received. The new law will protect both the producer and the consumer.

Asserting that the Texas produce commission men have formed a combine by means of which they have been able to force the price of Bermuda onions up to eight and one-third cents a pound, the onion growers of that state have formed the Palm Garden Onion Association for "busting" the onion trust.

HOGS ON CLOVER PASTURE.

An Illinois subscriber gives his experience in pasturing hogs on clover in the following communication:

With the possible exception of alfalfa I do not believe there is any better pasture for hogs than common red clover. They like it and do well on it, but it does not supply a complete ration. On account of its small stomach the hog cannot eat enough bulky feed to make rapid gains, hence it is necessary to supplement clover with a concentrated feed. I feed my hogs, when on clover, a half ration of grain or meal. I have found that well-bred pigs will make fifteen to eighteen pounds of pork for every bushel of corn consumed on clover.

It is a mistake to pasture any grass too closely and as hogs do not eat coarse, woody growths as readily as they do the tender ones, when the clover becomes tough and woody I find it a good practice to clip it with a mower at intervals of a week or ten days. In this way a new crop will be coming on which is fresh and readily eaten by the animals. This is not wasting clover, but prevents it from blossoming and getting too tough for the hogs. The life of the clover may be greatly prolonged by this method of clipping.

When the clover is wet with dew or rain I do not allow sows with pigs following them to run on it, as it is likely to produce scours. This ailment is one to be avoided, as it is often difficult to control. It makes a loss in growth and is an expensive trouble.

My pigs have fresh water in plentiful supply, and a box containing salt, wood ashes and charcoal is always accessible. These act as a vermifuge and preventive of disease and meet the hog's craving for mineral matter in the feed.

When giving hogs their grain feed, care should be exercised that hogs of equal strength and vigor are placed together. The smaller and weaker ones should be fed in troughs apart from the larger and stronger animals, so when the troughs are filled all may get their share. It is not an uncommon sight to see a feed trough from which the smaller and weaker animals are forced away, while the stronger brethren get the lion's share.

Unquestionably the swine breeder who does not have a good clover or alfalfa pasture for his hogs is handicapped compared with the fellow breeder who has. This subscriber's practice of feeding about one-half a ration of grain is scientifically sound. While it is true that hogs might be carried for a time while grazing without grain, yet there is a long-time maintenance cost in this case and some time before the shoats are finished for market this cost must be more than made up if any profit results. It may not be necessary to feed quite half a ration, in which case the hogs will finish up a little later, but the extent to which the cost is cheapened by using more clover might more than make up the greater length of the whole life of the shoat.

WHY FARM HELP IS SCARCE.

A public welfare league that has been operating a department intended to aid farmers in securing help and in turn assist those who are out of employment in obtaining work has discovered, as they think, one cause for the scarcity of farm labor. When this service was first originated it was soon discovered that there were more applications from farmers seeking help than there were applications of men seeking work. In most cases farmers are prepared to furnish employment only for a period of a few months, while those who made application for farm work were looking for employment the year around. This, therefore, places the farmer at a disadvantage, the league contends, when he goes into the labor market and competes with other industries, and, as a result, it is becoming more and more difficult to find sufficient labor to handle ordinary farm affairs.

Few young men with the right kind of stuff in them are satisfied to loaf around for a few months each year, between seasons, as it were, so that it very often happens that those who seek employment in the city from a given neighborhood are taken from among the very best of those who are available. No fault can be found with the efficiency of those who are able to find employment the year around on farms because, as a matter of fact, these may be said to include the first draft made upon the available supply. If, however, the supply of good men is not absorbed in this way no criticism should be offered if the farm is deserted altogether and some sort of city or town life entered upon.

In a way the situation is such as to leave the farmer in a dilemma because, instead of getting better it is rapidly growing worse. It is a problem that will yet awaken the whole nation before it is solved, brought about by the disparity that exists between the number of those engaged in production and those who are non-producers. In spite of this it is not a difficult matter to suggest a remedy and it is a problem that must be worked out by the farmer himself. This remedy, in our opinion, will consist in the providing of homes for farm help so that those so engaged can enjoy to a fuller extent the results of their labor on the farm than they can command at any other occupation. They must have in these cottages even a little more of the necessities, comforts and luxuries of life than they can obtain elsewhere and there must be supplied educational opportunities for their children that are not surpassed either in town or city. When this condition is brought about it will not be a question of working five or six months and then loafing, but rather it will become an agreeable life work, comparing favorably in this respect with any other form of industry.

THE WORK HORSE'S SHOULDERS.

Good teamsters are born and not made. This applies not only to talent required in feeding animals, but in their care generally. Men may be ever so kind and altogether rightly disposed and yet fall far short of being able to get the maximum service out of work horses and at the same time keep them in good flesh and keep their shoulders in proper condition. On this point a Kansas subscriber has some advice to offer which he gives in the following communication:

All of us who work horses should be careful to take good care of their shoulders. Occasionally with the best of care a horse's shoulders will get galled, causing the hair to slip off and making the part tender; or sometimes a bunch will form on the part of the shoulder where the collar presses the most. The galls are caused from sweat and lack of ventilation; the bunches are caused from bruising.

Prevention in all things is better than a cure. See that the collar fits the horse's neck properly. When working the horse in the field raise the collar up occasionally so the sweaty shoulder can get air. When the horse is unharnessed at night the shoulders should be washed off with cold water in which a little salt has been dissolved. Do the job thoroughly and dry with an old sack. See that the collar does not make the horse's neck sore where it rests against it on the top. Pull the horse's mane out from beneath the collar and braid or tie it up so it will not slip back.

When a gall starts it should be treated promptly and properly before it runs into a bad sore. Keep it washed clean with salt water and apply plenty of healing powder. The healing powder is much superior to any salve; for it absorbs the moisture which accumulates on the sore. When it is necessary to work the horse cut a hole in a collar pad so it will fit all around the sore and prevent the collar pressing on it. Take the healing powder out in the field and dust the sore occasionally while resting at the ends of the rows. This will hasten the cure and be a great comfort to the animal.

The sores which form on the top of the neck are the most dangerous, for they are close to the spinal cord. I have known of cases where these sores were neglected and as a result the animal died. Never put a strong preparation, no matter how strongly it is urged upon you, upon the sore on the top of the horse's neck. Use the healing powder and, if possible, rest the horse. Trim the mane away and have a large, smooth piece of leather made to slip under the top of the collar. These sores are difficult to cure because the horse wiggles and twists its neck continuously, keeping the affected place irritated.

The bunches which form on the shoulders are annoying, but not especially dangerous. If very bad they may have to be removed by the horse doctor's knife when cool weather comes. Wash them with cool or cold water and see that the collar does not press against them any more than can be helped. A salve preparation which contains blue vitriol will have to be used here. Apply it frequently and keep the collar and pad clean.

To soften up the collar pound the inside with a large bottle held by the neck in the hand. When pads are used it is necessary to wash them frequently with soap and warm water in order to remove the filth which prevents any ventilation by clogging up the pores in the cloth. Humane collars are coming into more extensive use every year because in most of cases they remedy the faults of the old-style collar.

To this we would like to add that the one principle that must be kept in mind in fitting the collar is to keep the point of draft close to the sides of the neck. A wide collar means that the points of the shoulder blades bear too much of the pressure and this means a constant movement of the collar which results sooner or later in galling and blistering. While we are not fond of the sweat pad, yet there are instances where the pad can be used to very great advantage, particularly as a horse gets a little thinner and the collar therefore becomes too wide. Before resorting to the use of the pad, however, we prefer to do everything that can be done to pull the collar in the sides, even though it is necessary to place a strap under each hame to use as a leverage in springing the sides of the collar in toward the neck. The principle to be kept in mind in fitting the collar is well illustrated by our own inclination when we are obliged to carry a rail, post or any similar object on our shoulder. We do not place it out at the point, but rather close up to the neck where there is a good pad of flesh and where there is the least possible degree of movement.

THE COMMUNITY CENTER.

The legislature of at least two of the grain-belt states the past winter passed laws authorizing the use of rural schoolhouses as community centers, for general meetings of all sorts. The campaign to unlock the schoolhouse door and use the hitherto closed building for night meetings of an educational, social or general nature is gaining great headway. The possibilities of the campaign are well set forth in this description of the success of the work in a Kansas community:

Last year two evening meetings were held each week with plays and games in the basement for the upper grade boys, while their elders listened to programs or lectures upstairs. Clair Turner, director of physical training at the normal school, directed the boys on these evenings and he said his principal desire was "to teach them team work—to get along with people."

In the assembly room the evening's programs were varied. Sometimes two of the schoolrooms united in giving a program and the parents were surprised to hear their children speak in public with grace and ease. They admitted they hadn't been in the habit of visiting the school, so they didn't really known what the children were learning. Some evenings there were lectures on subjects of general interest. One night Miss Mary Whitney of the normal talked on woman suffrage and on another occasion Mrs. William Allen White told of the benefits of social centers in other towns.

At some of the meetings, both evening and afternoon, tea was served, and the affairs assumed considerable social importance. Then the women felt the need of plates and cups and assessed each member ten cents with which to buy them. They needed more seating room than the benches of the schoolroom afforded and some of the townspeople outside the Maynard neighborhood gave money to buy 100 chairs. Last fall the women made one of the afternoon meetings a tea towel shower, thus providing for the needs of the dishwashers. Fifty dollars' worth of playground apparatus has been bought.

This year, at the afternoon meetings, the women took up the study of civics to prepare themselves for the ballot. Also the women bring their tatting or other fancy work, and after the lessons they "tat" and visit and compare notes on one another's work. Each afternoon, at the close, there has been half an hour's talk on a question of interest.

The men and the young people have turned out largely to the evening meetings. Some of them have been in the form of literary programs by the school children under the direction of their teachers, and others have been discussions of important questions in which all are interested.

It is of interest to note that this particular campaign was started by a farmer's wife. She had read of the success of the community center idea elsewhere and devoted herself to the work with an enthusiasm which was almost certain to bring results. Farmers' wives elsewhere may profit by her splendid example. There is a great field for work in such a campaign, with hardly a limit to the possibilities of good to be achieved.

THE DIPPING VAT FOR HOGS.

In spite of the fact that some experiment stations continue to give farmers advice about building dipping vats and while it is impossible that this advice is occasionally taken, yet as a matter of fact the dipping tank is considered out of date by the majority of swine breeders. Most of the directions about building dipping tanks are given by men who are not in the least familiar with the difficulties that attend the dipping of a bunch of hogs. Those who have had practical experience know something about the kind of a fight that a hog will put up before he will take a second bath in a dipping tank. Even though convenient yards are constructed and slippery floors utilized the task of giving an ablution to a bunch of hogs is one that most men prefer to shun rather than undertake.

There is an easier way to accomplish the same result. We refer to the plan of rounding up the bunch into a pen or small yard and applying the dip with an ordinary sprinkling can or what is much better, a spray pump. The dousing of 100 hogs or even 200 in this way is about a fifteen-minute chore and it can be done almost as thoroughly as if they are immersed completely below the surface of the dipping mixture.

If the spray pump method is used it is not enough to simply wet the backs of the hogs, but rather keep the good work up until every hair is soaked and saturated and the ground under them thoroughly wet. If they are left in the same yard an hour or two they will wallow around on the slippery floor and bring every part of their bodies into complete contact with the solution. It is not contended that every ailment of a hog can be cured in one spraying, but the task is so simple that there is no reason why the treatment cannot be repeated every two or three weeks at a very small outlay for materials and at a very slight labor expense. Attention might be called to the fact that during very warm weather it is better if the spraying can be done in the shade.

In view of the success that has attended the plan outlined above we would advise those of our readers who are planning on an expensive dipping tank to first make a trial of the method that we have suggested. An investment made in a spray pump will be a good one in more ways than one because it can be used around hen houses, stables and in all kinds of pens.

Special attention should be called to the fact that the ordinary concrete wallow is being used more and more, the dip mixture in this case being kept at just such strength so that it will do the work and yet at the same time not be sufficiently painful in the eyes or ears of the hogs to keep them out of it. Possibly this plan might eventually do almost entirely away with the system of spraying that we have mentioned.

IOWA STALLION REGISTRATION.

During the year 1912, according to the report of the stallion registration division of the Iowa Department of Agriculture, there were in service in the state 5,679 pure-bred stallions, 2,449 grade stallions, 52 pure-bred jacks and 509 grade jacks. Certificates for 5,915 were issued on statements of veterinarians, and 2,830 on affidavits of owners. Seventy per cent of the stallions of the state are recorded animals. The fees collected by the state for the issuance of certificates amounted to $8,930. Estimating the cost of the veterinarians at an average of $3 the stallion owners have paid to veterinarians the sum of $17,745. Their total outlay because of the stallion law was $26,675.

Sixty-eight stallions were disqualified for public service because of blindness, cataract, coital exanthema, melanosis, periodic ophthalmia, bog spavin or bone spavin. Certificates were issued to 727 animals characterized as unsound. The different causes of unsoundness given were sidebone, roaring, heaves, blindness, ring bone, curb, chorea (St. Vitus dance or like nervous affections) or navicular disease.

In Keokuk county 274 animals were certified, in Delaware county 209, and from that down to twenty-six in Worth county. In Wayne county two-thirds of the horses are grades of unknown ancestry. The Percherons led the breeds with 2,716. There were 766 Belgians, 485 Shires, 464 French Drafts, 321 Clydesdales and 689 Trotters. Others were Cleveland Bays, French Coachers, Oldenburg Coachers, Hackneys, Morgans, Saddlers, Suffolks, Shetlands and Thoroughbreds.

The late sesson of the state legislature made some changes in the law, which went into effect March 20, 1913. One of the changes removes bog spavin from the list of disqualifying diseases and puts into the class of unsoundnesses. Another amendment takes away from the horse owner the privilege of making an affidavit of soundness, and makes a veterinarian's certificate obligatory. A penalty is provided for violation of the law, but no provision is made for enforcement.

Best Car For You!

Cartercar

Why?—Simply because the Cartercar will give service that is impossible for gear cars. This car will travel roads which are impossible for the ordinary car. This is the gearless transmission car—that will climb steep hills—go through mud and sand—and has unlimited speeds. No jerks nor jars—will wear tires from one-third to one-half longer. You'll use it the year around—you'll enjoy it the year around. It is efficient—trouble-proof.

Model 5A—Five-passenger Touring Car, with electric starting and lighting system and complete equipment—Price f. o. b. Pontiac $1700

Model 5B—A big classy Roadster—with electric starting and lighting system and complete equipment—Price f.o.b. Pontiac $1600.

Send for Catalog!

Big 64 page book explains all these advantages. Send for it today, and learn about this, the most practical motor car.

Cartercar Company : : : Pontiac, Mich.

Wool Growers, Beware of the Tariff "Bugaboo"

Don't let this *tariff talk* scare you. Even though the tariff is being revised, you will get a good price for your clip, *provided you sell at the right time.*

To take care of our customers during this season of surprisingly quick-changing prices, we are going to send FREE Special Market Reports *frequently*, from now till September. These Special Reports will be authentic and reliable, being based on our 47 years experience, during which time we have become one of the biggest wool merchants in the world.

By watching our Reports closely, our customers can pick the best time to sell. Last year our customers made an average of 2c to 3c per pound more for their wool by following our advice. *This* year they will profit *even more*, as a result of our Special Reports.

Now, if you have as much as 200 pounds of wool, you can have your name put on our mailing list. You'll get our Special Reports, free, *all through the season.* You won't make the mistake of selling at the *wrong* time, or of selling to some buyer who, on account of the tariff agitation, is afraid to pay you the market price, or will scare you into taking less than the market value.

Remember, we charge nothing for this service. We place you under no obligation whatever. We must print about 50,000 Reports anyhow for our old customers. It's no particular trouble to print a few hundred extra for other wool growers.

Merely send us your name on a postal. Then, every time we get out a Special Market Report you will be remembered. You certainly can't *lose* anything by watching our Reports, and they may be the means of saving you a lot of money—*good, hard coin that rightfully belongs to you.*

This is no season to be selling wool to any old buyer at any old time. GET POSTED. If you send your name on a postal *now*, you'll get some interesting Wool News by return mail. (12)

Let Me Pay The Postage To You—On My Big Free Book

Do You Want to Save $25.00 TO $40.00 On Your New Buggy

Phelps says he'll save you $25 to $40 on a genuine Split Hickory. Is it worth a postal to find out? Is it worth a postal to see the 140 styles of vehicles and complete line of harness all shown in Phelps' new book. Is it worth a postal to learn the *reasons why* 167,000 *other* people bought

SPLIT HICKORY

vehicles? Phelps sells direct from his own factory—on 30 days' Free Road Test—2 years guarantee. You keep all the middle profits—you take no risk—everything is clearly photographed and accurately described and all *guaranteed.* Why not get Phelps' book so you can compare with others. Phelps pays postage if you write him a letter or postal. Just say "Send Book."

H. C. Phelps, Pres., The Ohio Carriage Mfg. Co.
Station 31 Columbus, Ohio

CURRENT EVENTS

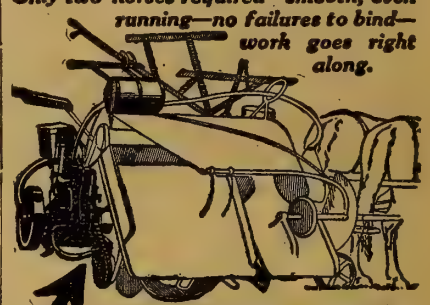
SECRETARY OF STATE BRYAN spent the greater part of the past week in California, acting as an emissary of President Wilson in an attempt to restrain the California legislature from enacting a land law which is looked upon by Japan not only as unjust but also as an international affront. The secretary spent the greater part of his time in conference with Gov. Hiram Johnson and the legislature, but was unable to swing the California lawmakers around to the president's way of thinking. The Californians demand the right to pass a law which will make it impossible for aliens, "ineligible to citizenship," to own or to lease land for more than one year at a time. Similar laws are in effect in Arizona and Washington, and California demanded the privilege of enacting similar legislation. President Wilson sought to secure one of four things: the postponement of the matter for two years, until a commission can investigate; turning the whole affair over to the federal government, to be settled by diplomacy; a law similar to the one in force in Illinois, permitting aliens to hold land, but not for more than six years; or a law similar to the one in the District of Columbia, applying to all aliens alike. No one of these propositions was wholly favorable to the Californians, many of the leading democrats being willing to let the president settle the matter by diplomacy, but the progressives, headed by Governor Johnson, demanding the right to enact a state law at once to meet the situation. The fact that Japanese immigration is declining, that there are fewer than 50,000 Japanese in a population of 2,400,000 and that the Japs own only about 100,000 acres of land shows that the Californians are inclined to make the land problem appear more serious than it is. Their insistence on legislation may make the situation grave, from a national standpoint, however, the Japanese anti-American feeling being already strong. After repeated conferences the legislature proceeded to enact the desired legislation, Secretary Bryan's trip being a failure, except so far as it impressed Japan that the federal government was doing everything possible to protect Japanese interests.

BY THE time this is read the lower house of congress will probably have passed the Underwood tariff bill, without any important amendment. The entire past week has been devoted to speeches and the introduction of amendments, the republicans waging a hopeless fight to secure changes in the bill recommended by the democratic ways and means committee. The session was enlivened one day by the attack of Representative Murdock, of Kansas, a progressive, on the sincerity of those republicans in the last congress who favored a non-partisan tariff commission. Being called to account for his remarks, he secured corroborating opinions from many of the democratic leaders, Speaker Clark remarking: "My judgment is that there never was a republican leader in this house really in favor of a tariff commission." It will be recalled that President Taft appointed an unofficial tariff commission, to report directly to him instead of to congress, and that he vetoed numerous tariff revision bills on the ground that the tariff board had not yet reported. At that time the republican leaders used the commission idea as an excuse for delaying revision, an action which now makes them the object of attack by progressives and democrats. For the most part, however, the tariff debate of the past week was mild and unimportant, the real work of congress being done in committees. The senate will probably begin wrestling with the tariff bill early next week.

THE Balkan situation looms more ominous. Montenegro seems likely to accede to Austria's demand for the surrender of Scutari, in exchange for which it will receive equally valuable territory elsewhere. But the other three Balkan allies are practically at each other's throats and already reports come of battles between the Greeks, Servians and Bulgarians. It is looked upon as almost certain that as soon as final peace with Turkey is arranged, the Balkan alliance will be broken up and warfare between the Balkan states will ensue. The trouble is that each state demands the lion's share of the spoils of war. Montenegro fired the first shot of the war; the Bulgarians have borne the brunt of the land fighting and captured Adrianople; the Servians have given the other states assistance when most needed and Greece has borne the brunt of the sea fighting. It would seem that all four of the allies were about equally entitled to territory, but the Bulgarians evince a desire to take the lion's share, regardless of right or justice. At the same time, it will be extremely unfortunate if four Christian nations, banded together to drive the Moslem out of Europe, were to fall to fighting and thus present a most un-Christian-like example to their anti-Christian foe. If the Balkan states go to war, it is highly probable that the peace of Europe will be shattered, the big powers being behind the little Balkan states, are envious of one another and of each other's prestige. The situation throughout Europe generally is looked upon as critical.

Run Your Binder with a Cushman Engine

Only two horses required—smooth, even running—no failures to bind—work goes right along.



Horses Simply Draw Machine

The engine does all the work of operating. 4 h.p. Weight under 200 lbs. Speeds to 5 h. p. easily. Automatic throttle governor measures out fuel according to work. The original binder engine and more in use than all others combined. Detach and use for all-purpose farm power. Easy to handle, fits in anywhere. We also build 6-8 and 20 h.p. engines with same high efficiency—engines for all heavy duty. Write for free catalogue.

Farm Furrows
TURNED BY A PRACTICAL FARMER

Those who raise less than an average crop of any kind should be urged to hump themselves into better methods and no doubt many of them would be willing to get the hump on if they only knew how. Others know how, but knowing how must be backed up with willingness to work in order to bring results.

Don't forget that the solutions that are used in spraying fruit trees and also those that are used in treating seed grain for smut are poisonous and are liable to cause death to persons and animals as well as the things we intend to kill with them. A fool and his life may be soon parted if the fool gets to fooling with poisons.

Choose brood sows from the earliest and largest litters.

Spring house cleaning should include the outbuildings and the lawn, also the back yard. A little paint added to the cleaning will help brighten things up and make the home more homelike.

There is no way of telling just how much forage it will take to carry a bunch of cattle through the winter, because winters are so unlike and even after winter is over, spring keeps us guessing until the last minute as to when we can feel sure that the pastures are able to take care of the stock.

Have clean sand for concrete work, as dirty sand will cause unsatisfactory results.

The difference in the cost of a twenty-six-inch and a thirty-nine-inch woven-wire fence is not enough to make up the difference in the value of the fence after it is built. At least that has been my experience. Animals that cannot be turned by a well-built thirty-nine-inch fence with barbed wire at the top are out of place on the farm.

Keep the young orchard clear of weeds this season and there will be little damage from mice this winter.

This was not an early spring when we figure from the farm-work standpoint. The early ones found the fields very sticky and if they stuck to their work they got their machines pretty well stuck up. Later many of them will find that their crop is nothing to feel stuck up about because no one has ever raised a bumper crop that was "mudded in."

Do you practice regularity in the feeding hour for the hogs?

At the present time most of us are interested in the good roads question because just now a heavy shower makes the average road a thing we all like to stay away from. Reading good roads literature may help some, but taking a spade and ditching the water out of the wheel tracks and opening culverts will help a whole lot.

Begin early to fight the mites with all your might.

Little pigs should be made to take exercise and the sow ought not to be fed on too rich slop for a time. Lack of exercise and the mother sow eating too rich slop is a great combination for the development of thumps.

The high-wheeled planter is a little more tiresome to hop off and onto, but I have a notion that it runs steadier and I am certain it pulls easier.

The man who almost lies down and pulls on the check every time he sets the stake need not expect very straight cross checking. Pulling the wire in the field makes the man on the cultivator "dodge" when crossing the field.

Everyone has his own "best way" of hitching up three and four horses. My way is to drive with but two lines, whether the team be of three or four, but I do not claim that to be the only way. Most ways of hitching up horses are handy simply because the driver is used to that way.

The Company Behind the Cross Country

Look up the rating given The Thomas B. Jeffery Company by the great national commercial agencies. You will find it is the highest that can possibly be given to any concern.

Forty years of manufacturing experience and the result of constant striving toward ideals of accuracy constitute the greatest asset of this company today.

The Boston sales and service building, 640 Commonwealth Ave., Boston, Mass., one of nearly five hundred branches and distributing houses maintained by this company and by Cross Country dealers.

FIFTEEN fundamental facts we offer in conclusion. These are the facts that every buyer must consider if he chooses wisely. Study them carefully and consider their meaning.

1 The 1913 Cross Country is the product of forty years of manufacturing experience.

2 The Jeffery Company has the highest financial rating that it is possible for the commercial agencies to give.

3 Capital three million dollars, all paid in, with a large surplus.

4 The factory is owned practically in its entirety by one man and is absolutely independent of any alliance with any other concern.

5 Every piece of equipment and every particle of real estate owned by this company is paid for in full and never has a bill been allowed to pass discount.

6 Ninety-six per cent of all parts are made in the Jeffery works.

7 Twenty-five thousand Rambler cars are on the road.

8 The Jeffery organization includes a factory manned by two thousand men, with a sales and service force including nearly five hundred branches and distributing dealers.

9 The factory ground area is one hundred and four acres and the floor area twenty-five acres.

10 Cross Country parts sell from one-half to two-thirds less than parts of other cars.

11 Fifteen employes of this company have been in its employ twenty years and over; fifteen from fifteen to twenty years and nearly all the rest from one to fifteen years.

12 The Jeffery Company was the first American company to adopt the demountable wheel, universally used abroad and now being imitated widely in this country.

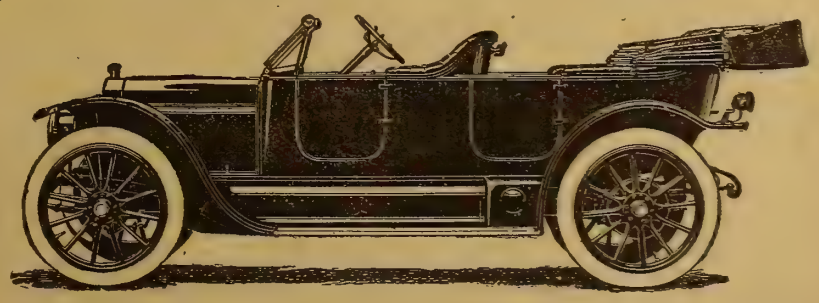
13 The Jeffery service facilities in every part of the United States are under direct company supervision and are unexcelled.

14 The Jeffery organization is an organization of young men, who have built up a reputation for fair dealing which entitles them to expect to be in business for many years.

15 The Jeffery Company is notably conservative, valuing permanent success beyond temporary profit.

The Jeffery organization produces nothing but the Cross Country car. We cannot, in view of the facts enumerated above, do anything else but build it right.

A beautiful four-color reproduction of the Cross Country, from an oil painting by R. Philip Brainard, is ready for mailing. See the Cross Country by all means, at any Jeffery branch or dealer's display room, but send for the picture anyway.



The Cross Country $1,875

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

SENSE IN CARING FOR CHICKENS.

To the Editor of The Homestead:

After having had several years of experience in raising early chicks I thought perhaps I could help some beginner by a few suggestions. Almost anyone can raise chicks hatched in May, but it takes more care to raise the March hatch.

I have lost lots of chicks with white diarrhea, but I don't believe it is so contagious as is commonly believed. In my opinion getting them too warm in the incubator before and after they are hatched or too warm or too cold in the brooder is the cause. I have lost hen-hatched chicks raised with the hen by their getting too cold on account of not being hovered properly just the same as incubator chicks raised with the hen or in the brooder.

My incubator chicks are now three weeks old and only one of the hatch died, not one cripple, and I believe it is because they were kept the right temperature. I had the brooder warmed and a piece of carpet over the paper that covered the floor. Over this I spread a piece of an old comforter and then a gallon of nice dry sand which had been set behind the stove the evening before to warm—and what a fine place to put baby chicks. As the chicks grow I take out the piece of comforter. The sand was brought in last fall and stored away nice and dry for this very purpose.

Their first feed is bread crumbs. The bread is dry enough to roll into crumbs with the rolling pin and is sprinkled over the sand. This morning after giving them their breakfast of table scraps and old bread soaked in hot milk and sqeezed dry, I housed them in the brooder (as it is cold and snowy) while I swept up the old chaff from the floor anl cleaned up in general. By the time this was done they were yelling to get out and I let them out on the clean bare floor while I went to the barn for clean chaff. How they were screaming when I got back, but as soon as the new chaff is placed in the middle of the floor what a difference! I just had to look at the busy little bodies and listen to their chatter, chatter. They surely enjoy working for their living the way they scratch and grow.

I feed them a commercial chick feed in the chaff and some boiled eggs occasionally. "Tested out eggs" are never given, but good fresh ones. Fresh water is kept before them always by punching some holes near the top of a nice, bright tin can, filling it with water and then placing a saucer over it up side down and turning over quickly so as not to spill the water. This is placed on a block or brick so they won't fill it with chaff.

I sometimes put green sod in the house for them to scratch to pieces when the weather is not fit for them to be out of doors. A shovelful of sod thrown on the floor keeps them busy for a while and it doesn't take them long to pick out the green grass and little white roots.

The brooder should be thoroughly disinfected before putting in the brood chicks. I used my brooder house for cockerels last winter, but it was sprayed with coal oil and carbolic acid, then scrubbed with soap suds and finally with lye water and an old broom. After being thoroughly dry and the window washed, it was ready for my fine brood of chicks.

Adams Co., Ia. Meda Caskey.

TELLS WHY CHICKS DIE

J. C. Reefer, the poultry expert, of 1630a Main St., Kansas City, Mo., is giving away free a valuable book entitled "White Diarrhoea and How to Cure It." This wonderful book contains some new scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. Everyone interested in poultry should certainly write Mr. Reefer for one of these valuable FREE books.

When writing to advertisers please mention The Homestead.

POINTERS.

—G. J. Pfeil, Central City, Iowa, is offering fresh, selected Barred Plymouth Rock eggs from fine, narrow-barred birds, scoring 90 to 92½, at prices named in his advertisement found elsewhere in this department.

—In an advertisement in the Rhode Island Red Department, Verne E. Argo, Tipton, Iowa, offers eggs for hatching from Single Comb Brown Leghorns. Note the extraordinary reasonable prices quoted.

—J. H. Kelly, Altoona, Iowa, advertises Bluff Plymouth Rock eggs. He informs us that he has a fine flock of this breed on large range. His special mating pens have lots, an acre in extent, which makes them equal to range birds for utility. This gives better results than is possible in smaller pens. Attractive prices will be quoted. Send for circular.

—M. E. Edwards, Walnut, Iowa, breeds Rhode Island Reds and is now offering eggs for hatching as will be noted in the advertisement elsewhere. Good sales are reported from this flock as well as the fact that a good supply of fresh eggs are now ready for shipment. Satisfaction is guaranteed. Address inquiries to M. E. Edwards, Walnut, Iowa.

—H. Haas, Lansing, Iowa, is offering some special inducements on Single Comb Brown Leghorn and White Plymouth Rock eggs. His eggs this season have a record of having hatched forty-eight chicks from fifty eggs. He sells eggs at the rate of five cents each and throws in a drinking fountain free with each order for twenty eggs. See advertisement on page 9 and do not delay orders.

—Farmers or others who are in the market to purchase Single Comb White Leghorn eggs for hatching should take note of the advertisement of Eggland Farm, Mt. Vernon, Iowa, which is to be found in the proper department. This farm keeps White Leghorns only of the purest strains and eggs purchased from it may be depended upon to produce the highest class of fowls of the breed.

—Earl Bloom, breeder of Plymouth Rocks and Single Comb Brown Leghorns, advises us under recent date that he has been having a fine trade in eggs, shipping to different states as well as selling to local buyers. He has set a large incubator for his own use so that he will be able to take care of his trade next fall and winter. He has new blood for old customers. See his advertisement and write for any additional information.

—Farmers who want to get started right with Plymouth Rocks should buy eggs from Mrs. H. J. Hess, Waterloo, Iowa, whose advertisement appears in the Barred Plymouth Rock division of this paper. While Mrs. Hess has taken great pains and expended a good deal of money to get standard high-class Plymouth Rocks closely related to those which have been winners at prominent shows, she is offering her customers the benefit of farmers' prices on eggs for hatching. Notice the extraordinary low prices she quotes. The eggs have been hatching extra well and orders can be filled promptly.

—Carl Ehlers, Gretna, Neb., places an advertisement in the proper division of this paper which will be of particular interest to those who admire White Wyandotte chickens. He is offering for sale six late hatched utility breeding pens of White Wyandottes, each consisting of one male and eight laying females and at the price of $8 per pen. He also offers eggs for hatching at half price as will be noted in the advertisement. Mr. Ehlers has been breeding White Wyandottes exclusively for seven years. Every bird he sells carries the White Wyandotte shape, has a rose comb and is in good laying condition. His breeding pens are not related. Write him for further information if required. Address Carl Ehlers, Route 3, Gretna, Neb.

—Wm. Kerr, Winthrop, Iowa, breeds Plymouth Rocks of the Thompson and Bradley strains and offers eggs for sale from both matings of each, as well as matings from the C. H. Latham strain. In a recent note, Mr. Kerr says: "I have had an excellent sale of both stock and eggs this season. All my surplus stock are gone and I had to return $40 worth of orders. The Homestead brought me orders for stock from seven different states and for eggs as far east as New York and south as Arkansas. I am now able to fill all orders promptly with good, fresh eggs that will hatch something fine. My stock is direct from Thompson's, Bradley's and Latham's best matings and are high scoring. I breed for utility purposes as well as for fancy requirements. I have cockerels weighing up to ten and one-half pounds, cocks eleven and three-fourths pounds to twelve pounds, and hens nine to nine and one-half pounds. They have deep blue, distinct markings to the skin and extra big, yellow legs and beaks. While my advertisement has appeared in The Homestead and two poultry papers The Homestead has proven the best of all.

—Mrs. A. O. Adkison, Oakland, Iowa, breeds Single Comb Rhode Island Reds. She writes us that she is having unusual success getting replies every week from the advertisement in The Homestead and pleasing her customers. She has plenty of eggs to sell from good flocks of the breed.

—Mrs. S. Rader, Laurel, Iowa, offers Single Comb Rhode Island Red eggs for sale at remarkably low prices in the advertisement in the proper department of this issue.

RHODE ISLAND REDS.

EGGS. Matings E. B. Thompson Imperial Ringlets at $3, 15; W. Rocks, S. S. Hamburgs, $2. 15. Embden geese eggs 20c ea. Mrs. H. E. Brown, Corning, Ia.

EGGS From M. B. pullets and 26-lb. hens, Orpingtons, Hamburgs, Brahmas, all guaranteed to hatch. Address Steve L. Morlan, Piano, Iowa.

NEWS OF THE SALE RING

Russell's Holstein Sale.

One hundred and ninety-three head of Holstein-Friesian cows and heifers were sold May 1st and 2d at Idle Hour Place Farm, Geneva, Ohio, by T. H. Russell, for $58,580, or an average of $303.50. This is a record unequaled by any other breeder of either beef or dairy cattle, numbers considered. There is reason for the result, however. Mr. Russell is easily the big Holstein breeder of the country. He carries on his operations on a large scale. He tells his story to the public in a big way and in a manner out of the ordinary. There are very few, if any other, herds of any breed from which a draft of 200 head could be selected and sent into the ring, every one guranteed without a blemish. That is what Mr. Russell did. He advertised 200 head, but there were a few head which had not done well since they were cataloged, and they were not presented. Buyers and bidders were on hand from Washington, Oregon, South Dakota, Iowa, Illinois, Wisconsin, Michigan, Indiana, Ohio, Pennsylvania and New York, while there were mail bids from half a dozen other states. Values rated very even, the top of the sale being $605, paid by Benjamin Laxley, Jr., Covington, Ohio, for the eight-year-old 220-pound cow Lady Burton Hengerveld De Kol. F. H. Powell, Cochranton, Pa., paid $600 for the two-year-old daughter of Count Cornucopia Korndyke, Countess Pearl of Lake Lawn. The largest individual buyer was John F. Janssen, Seattle, Wash., who secured forty head of the top things in the sale. Mr. Janssen is the largest dealer in Holstein cattle on the coast and his selections at the Russell sale will form the best lot of cattle of this breed that he ever gave to the Pacific country. Weichman Bros., Center, Wis., were liberal buyers, taking thirty-six head of good ones, and R. M. Roberts, South Charleston, Ohio, purchased twenty-four head. This sale also marked the advent into Holstein circles of Thos. Johnson, Columbus, Ohio, formerly a prominent Short-horn breeder. Mr. Johnson secured eleven head of the best cows at conservative prices. Frank Horton, Fennimore, Wis., secured six good ones. The value of great sires was demonstrated in the sale by the eagerness of those present to secure the daughters of Pontiac Hengerveld Parthenea and Count Cornucopia Korndyke, two of the great bulls at Idle Hour Place Farm. There was nothing overlooked that would add to the success of the sale. Every man was the guest of Mr. Russell from the time he arrived until he left and right well was he cared for. Thursday evening Mr. Russell gave a dinner at the hotel to the visiting stockmen. At its conclusion he introduced Col. Carey M. Jones as the toastmaster of the evening, a position he filled with much credit, and brief talks were made by many gentlemen. Mr. Russell is to be congratulated on the great success of his sale. He fulfilled every promise he had made, gained new friends by the high-class, honorable manner of doing business and gave added evidence that Idle Hour Place Farm is Holstein headquarters. The adherents of this great dairy herd should feel honored that such an establishment with such a progressive and honorable gentleman at its head is engaged in furthering the interests of the Holstein. The sale details were carefully handled by S. T. Wood, manager of the Holstein Breeder Company, and one of the best posted experts in the country. Cols. Carey M. Jones, D. L. Perry, B. V. Kelly and C. W. Canfield were the auctioneers, and the following is a detailed list of the 193 females sold, no bulls being cataloged or offered:

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

FEEDING VALUE OF THE CEREALS.

The following communication has been received from one of our subscribers, Mr. Henry A. Chapman:

I would like some information as to the feeding value of different grains raised on the farm. For instance, I am feeding my milk cows a ration composed of ground barley, ground oats and bran in the proportion of two parts of oats to one of barley and one-third bran. In addition they are given bundle corn and shredded fodder. What more do I need to balance the ration? Is barley good for milk cows and how do you figure protein value in corn stover or binder corn? What is a consistent ratio for cows as pertaining to protein and carbohydrates? I would like a list showing the protein and fat values of the different grains.

The principal grains used on the farm for feeding purposes are oats, corn, barley, and occasionally wheat and rye. The feeding value of these feeds for dairy cows largely lies in their protein content because protein is scarce and high in price. Too much stress, of course, cannot be laid on protein simply because it is high in price, for there are other things coming in which materially affect the feeding value besides scarcity. There must be considered palatability, digestibility and the general effect on the animal's body. Of the three feeds first mentioned (corn, oats and barley) they stand in relation to each other for milk production about as follows: Oats rank first, each 100 pounds containing nine pounds of protein and sixty pounds of carbohydrates and fat. Barley would come in second with nine parts protein and seventy pounds carbohydrates and fat, while corn has six pounds protein and seventy pounds carbohydrates and fat. It would appear at first thought that barley would be the better feed, as it contains the same amount of protein as oats with the added advantage of possessing a higher fat content; but oats comes nearer approaching a balance, while it furnishes a roughage so much needed by the animal and which is very palatable. Bran is a by-product, not, strictly speaking, a farm product, but it is a most excellent feed for dairy cows. It is a much better feed for milk production, especially when fed in connection with other feeds, for variety, than ground wheat. Whole wheat contains 10.2 pounds of protein while bran contains 12.6 pounds protein, per hundred pounds. Bran is more bulky, less concentrated and pasty and aids materially in carrying other feeds through the manifold and alimentary tract, and absorbs the juices of the stomach, causing the animal to take heavy drafts of water so essential to the production of large quantities of milk. I think our inquirer has compounded a very good ration for his cows. While it could be cheapened some it serves very well and the three feeds above mentioned in the proportions given show a nutritive ratio of nearly 1:5, and with the addition of the corn in the bundle and shredded fodder ad libitum the ration would be widened perhaps two points. He should feed one pound of the mixed grains to every three pounds of milk produced.

A consistent ration for cows in full flow and heavy producers is 1:6. Light milkers will do very well on a ration of 1;7, but it should not be widened beyond this.

Corn stover has a nutritive ratio of about 1:23, depending somewhat on the quality of the feed. Binder corn, or corn fodder has a ratio of 1:14.3.

This correspondent has neglected one of the principal things in making up his ration. While the ration for variety, palatability and balance is a good one, he has not taken into consideration the price. Barley may be cheap with him, but with us it is high, so discarding the barley and increasing the oats, corn and bran in their relative proportions would

Oxford Duke E., a typical representative of the Bates strain of Shorthorns, for several years stood at the head of the herd owned by B. W. Little, Janesville, Wis. This great sire belongs to one of the four or five most popular families of Bates' cattle. He has left an indelible stamp upon the herd built up and maintained by this Rock county, Wisconsin, breeder. The sire now at the head of the Little herd, Siddington Duke 6th, has lately been sold to one of Iowa's most prominent breeders of milking Short-horns. Mr. Little's herd is undoubtedly one of the purest Bates' collection in this country. See advertisement on page 27.

Everybody's Buying SAGINAWS

Why do men now demand so many "Saginaws" that five huge factories must be operated at full capacity in order not to disappoint dairymen and stockmen? Just think a minute and you'll remember. Hasn't the "Saginaw" introduced every improvement known to Silos in the past 7 years?

Didn't the Saginaw Silo recently adopt the Patented Angle Steel Rib and the Spline-Dowel? Wasn't it the Saginaw that made the All-Steel Door Frame famous? And was ever anything invented to compare with the Saginaw Base Anchor or the Saginaw Inner Anchor? Men, this year's Saginaw is a wonder! Strong as a City Skyscraper. Even when empty, it stands as immovable and strong as the great Rock of Gibraltar. Your Silage is always bright and clean clear to the edges, next to the wall.

WRITE! Rush a postal to us at once and you will soon have before your eyes the fascinating story of the World's Greatest Silo. No Dairyman or Stockman can afford to miss such a treat. Mail just a postal now, saying you want the new Saginaw Silo Book No. 34 and it will be sent you by return mail.

This Man Knows Cream Separators

Farmer Onswon's Advice to Farmers

Look at this BEATRICE. I paid $75 for it instead of the $100 to $110 usually asked for less capacity. It's the only A No. 1 separator on the market which has these two most important virtues:

Highest quality and fair price.

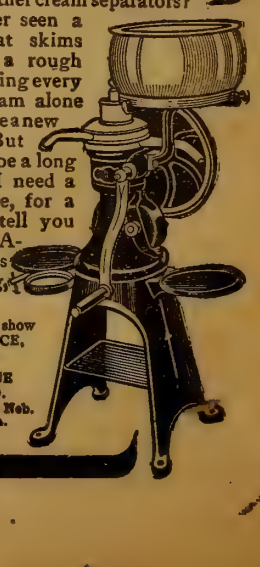
1,000 lbs., $75. They have smaller machines for less money.

Twice a day I spend *less than 2 minutes* to make this

BEATRICE Cream Separator

scrupulously clean and sanitary. The patented device does the trick. How's that compared with the time it takes to clean some other cream separators?

I have never seen a machine that skims closer. At a rough guess my saving every year on cream alone would buy me a new machine. But it's going to be a long time before I need a new machine, for a glance will tell you that the BEATRICE is built for long, long wear.



Let your dealer show you a BEATRICE, or write direct to

cheapen his ration considerably with just as good results.
Polk county, Ia. O. O. Brewbaker.

DIRT IS CHIEF CAUSE OF FATAL CALF SCOURS.

Dirt is the chief cause of calf scours, as filthy, poorly lighted, and badly-ventilated quarters harbor the disease germs in great numbers. Sometimes calf scours occurs in contagious form, and then only prompt measures will prevent serious losses.

At the College of Agriculture of the University of Wisconsin, special precautions are taken against scours. Not only are the calves kept in well lighted and otherwise sanitary quarters, but they are fed regularly until four weeks old on two to six pounds of their mother's milk three times daily. Care should be taken to have the temperature of the milk as near that of freshly-drawn milk as possible, and to keep the feeding pail clean.

"In spite of all precautions," states Prof. G. C. Humphrey, "we now and then have cases of scours among our calves. For the past two years we have successfully treated such cases as follows: As soon as symptoms appear, two to four tablespoonfuls of castor oil are mixed with one-half pint of milk and given to the calf. This is followed in four to six hours by one teaspoonful of a mixture of one part salol and two parts subnitrate of bismuth. This dose can also be given with one-half pint of new milk, or the powder can be placed on the tongue and washed down by a small amount of milk.

"The salol and sub-nitrate of bismuth can be secured from any druggist, mixed in the proper proportions at the time of purchase, and thus the powder will be readily available for use at any time. As an additional precaution against contagious scours it is advised that the navel of the newborn calf be wetted with a 1 to 500 solution of bichloride of mercury (corrosive sublimate)."

IOWA WEATHER AND CROP BULLETIN.

The following climate and crop bulletin is issued by the Iowa Weather and Crop service from the central station at Des Moines, for the week ending May 4, 1913:

Another week with much sunshine and no rain until Friday night has advanced farm work rapidly. A large acreage of ground is ready for the planter, and in many localities, in the southern counties, corn planting has begun. The first few days of the week were too cool for normal growth of vegetation, and the heavy frost on the 28th endangered the prospects of a fruit crop, but late reports do not show any damage done. After the 28th the days were warm enough to bring the average temperature for the week to about 8 degrees above the normal. Copius to heavy showers Saturday night in all parts of the state, except the northeastern counties. The needed moisture will be highly beneficial to all vegetation, and especially to small grains, grasses and early potatoes.

The Iowa Horticultural Experiment Station at Council Bluffs reports: "All varieties of apples show a full crop of blossoms, even where they bore heavily last fall; the Jonathan, perhaps showing the heaviest. Next in order come Ben Davis, Mo. Pippen, Northwestern, Winesap and Grimes. The Duchess, Salome, Arkansas and Iowa Blush are also heavily loaded. Plums showed a full set of bloom, but from all appearances did not fertilize well. Sour cherries full crop. Peaches in the southern part of the state will perhaps make 75 to 80 per cent crop. Pears show nearly full bloom. Berries wintered well. In many vineyards 10 to 20 per cent of older vines appear dead. Conditions are unfavorable for fertilization as scarcely an insect is working on the blossoms. The pollen is withering so that if the present cool and rainy weather prevails many of the fruits will not develop.

Geo. M. Chappel, Sec. Dir.

Corn is a warm weather plant, but the seasons have been so short lately that it has seemed necessary to crowd it into a little cold weather at one end of the season or the other. I do not believe in planting corn until the weather and soil are warm, but it sometimes seems necessary to do so to escape the cold weather of fall, when spring lingers long and is chilly.

Good books, music, innocent home games and various forms of amusement in and around the home will play an important part in keeping the boys and girls on the farm, away from the dangerous pleasures of the glaring city.

Ask Your Neighbor About his DE LAVAL

Wherever you find a De Laval user you will find a "booster."

The De Laval satisfies, pleases and makes money for its more than a million and a half owners.

There are probably quite a number of your neighbors who are using cream separators and in most communities a majority of these machines are De Lavals.

If you expect to buy a separator it will be worth your while to see what some of these De Laval users think of their machines.

If the evidence of your neighbors who use and recommend the De Laval is not enough to convince you of De Laval superiority, have the local De Laval agent put one in on trial for you and try any other machine you want to alongside of the De Laval.

Let the De Laval start saving your cream right now, this spring. It will soon pay for itself.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 DeLaval catalog also mailed upon request. Write to nearest office.

"Can't Sag" Gates Save You

Cost only one-third as much as ordinary iron, wire or gas pipe gates, but last twice as long. Neat in appearance—best and strongest gate made—light, easy to handle, opens both ways. Boards are double *bolted* between eight angle steel uprights and double truss braces. *guaranteed never to sag.*

BIG MONEY

Cost Less Than All Wood Gates—Last 5 Times as Long

Can't Sag Gates are furnished complete, ready to hang, or just the Gate Steels which include everything except the boards. Patent self-locking hinge feature---reinforced two piece malleable hinges. Six Triangular Truss Braces make gates extra strong.

Improved Elevating Attachment permits the gate to be raised full length from 5 to 30 inches, so small stock can pass under, and to swing over snow.

30 Days Free Trial and 5 Year Guarantee

Catalog shows both complete Gates and just the Steels, at prices you can't afford to miss. Send for my new catalog with free 30 days' trial and *freight prepaid offer.*

AN INNING FOR CATTLEMEN.

To the Editor of The Homestead:

Cattle breeders who went through the discouraging experiences and low prices of twenty years ago had some cause to doubt the prophecy of better times. It required some faith to believe and no little courage to act on that belief. But those who had the faith and ability to hold on are now enjoying a well-deserved reward.

During recent years men raising beef cattle have come into their own. For some time prices have brought encouragement, but the last year has brought handsome profits to all classes, whether ranchmen, breeders, or feeders. The writer has been connected with the beef cattle industry for more than forty years, but he does not remember a time when the market papers were so full of letters of stockmen expressing satisfaction with prices received as they have been during the months of this year. Without exception these reports show handsome profits and some of them reveal returns so large that they almost challenge belief. The most gratifying feature of this desirable condition is that it is not transient, but is destined to remain some years. It is the universal belief of men closely connected with the live stock trade that the price of beef cattle will rule high until there is a considerable increase in the supply of cattle. Commission men at the market centers generally hold this opinion, and the general manager of the American Short-horn Breeders' Association has publicly expressed the opinion that the future is very bright for men who are breeding beef cattle.

It required two or three years to convince the country that there was a shortage in cattle, but that fact is now generally admitted and many erratic and senseless measures have been offered to prevent the further reduction of cows and heifers by sale or slaughter. As a result of high values for beef cattle there is such a strong demand for cows and heifers as a foundation for cattle breeding that the trade in pedigreed cattle will undoubtedly be greatly benefited. Commission men at market centers are holding orders from the country for cows and heifers for breeding purposes, and one prominent ranchman from Texas reports that offers have been made for unborn calves. All this shows that ranchmen and farmers are as anxious to get into the cattle business as they were to get out of it during the period of depression.

The trade in pure-bred cattle is slow to respond to an enhancement in beef values, yet a commendable increase has been manifested in recent public sales and will be more noticeable in those of the future. When beef cattle were at moderate values and grain high, farmers asserted, and no doubt believed, they could not afford to raise cattle on their valuable lands, but the present price of beef with a prospect of cheaper corn has modified the problem. Aside from their value in maintaining the fertility of the land, it is not difficult to figure a profit on cattle raising on farms of the corn-belt. When good feeders sell at six and one-half to eight cents and fat yearlings bring from $80 to $120 each, their production ought to leave the farmer a margin; and as this industry is developed, the demand for pure-bred bulls will increase. As farmers' cattle, Short-horns are peculiarly adapted because of their dual capacity for beef and milk production. For restocking the farms with a profitable class of beef cattle, they will be found useful and desirable.

B. O. Cowan.

Protection for the cotton trade of Lancashire, England, by fostering the supply of cotton independent of America was the gist of Chancellor Lloyd-George's argument on introducing in the house of commons a resolution permitting the British government to guarantee a Sudan loan of fifteen million dollars for the development of cotton growing along the Nile. Egyptian cotton, he caimed, was better from the point of view of the manufacturer and the quality of the goods obtained from that product and also better from the point of view of the workman, because it was clean and healthier to work than American cotton.

$1.90 FOR THIS DANDY GATE

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LAW QUESTIONS CONSIDERED.

DEFECTIVE TITLE—DAMAGES.

A Subscriber, Burlington, Iowa.—In the fall of the year A sold his farm to B by a contract which provided that in March of the following year A was to furnish B with a warranty deed to the land, and an abstract showing a good and clear title. The contract was drawn by a lawyer and duly signed by the parties. In March A delivered the deed and an abstract of title to B who asked him if the abstract was all right and A said he considered it all right, as it had been passed upon by several loan companies. B paid cash for the land and took the deed and abstract without further question. Four or five years later B sold the land to C upon like conditions and C took the abstract to the same attorney who said there were several defects to be corrected to make the title clear. B then had the same corrected by another attorney at a cost of several hundred dollars before C would make settlement for the land. Is A liable to B for such expenditures?

Answer.—B had a good cause of action against A for damages on account of the defective title, but there is some question is to whether or not his claim is outlawed. He should submit the contract and A's deed to a local lawyer, and have them examined to determine this question.

DEEDS TO HUSBAND AND WIFE—WILLS.

A Subscriber, Sycamore, Ill.—A and B are husband and wife and have no children. They desire to be partners in all things. At present their money is in the bank, payable to either one before or after the death of the other. In case real estate should be purchased, how should the deeds be worded so that they shall own the property together during life and at death of either, have the property go to the other absolutely without a will or court proceedings? How can the personal property, such as horses, cattle, poultry, machinery and other things, be arranged so as to belong to both during life, and at death of either belong to the other? Would the listing of such things on the tax books in the names of both accomplish such result?

Answer.—When real estate is purchased, both husband and wife should be named in the deed as grantees and this will give them equal rights and title to the property. A deed could be made which would vest the property in both during life, and to the survivor at death of either. Such a deed should be carefully prepared by a competent lawyer, and it is not expedient to give a form for such deed in these columns. Even with such a deed, it would be impossible to avoid proceedings in court upon the death of either husband or wife, especially when personal property is concerned. The very best way to accomplish the purpose you wish is for each to make a will giving all property to the other at death. Listing on tax book would not answer such purpose.

DELIVERY OF RENT GRAIN.

A Subscriber, Monroe, Iowa.—On March 1, 1912, A leased B's farm land for the ensuing year, ending March 5, 1913. The contract required A to give grain rent and to deliver B's share to market, no specified time being fixed for such delivery. At harvest time B did not want to sell his share and had it put in his granary. Since the expiration of the contract can B compel A to deliver B's share at market?

Answer.—He cannot. When B had his share of the grain put in his granary instead of taken to market, he waived the provision in the contract requiring it to be delivered at market. He cannot now require A to take it from the granary and deliver it at market where A's term as tenant has expired.

GUARDIAN FOR MINOR.

A Subscriber, Goldfield, Iowa.—I have a boy sixteen years old working for me for wages. His father is dead, and his stepfather takes all his wages except $5 per month, which he allows the boy for clothes. The boy went home on a visit two years ago and his stepfather drove him away. He has no guardian. The boy has not been at home in the winter time for the last five years. Should the boy have a guardian appointed for him?

Answer.—The boy should have a legal guardian appointed for him. He is now of such age that he can choose a guardian for himself, with the approval of the judge of the district court of the county where his mother resides. He should have some friend make application to said judge for the appointment of a guardian, naming the person chosen by the minor.

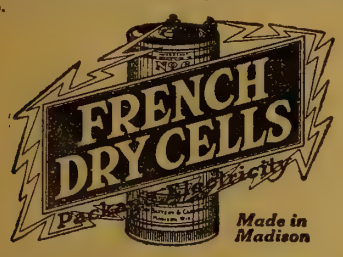
For the Telephone For the Gas Engine

Costs Less Than a Half Bushel of Corn

At a cost of a few pennies for each French Dry Battery—less than the price of half a bushel of corn—you can have a supply of electricity "on tap" always.

Don't Miss This!

French Dry Batteries will save you endless time, miles of steps and lots of money. The next time you fill up that dangerous kerosene lantern and "hike" for the barn in the dark, remember that French Dry Batteries in an electric flasher would supply the necessary light. Think of the advantage of having a telephone line from the house to the barn, or being able to open the front gate without leaving the porch and dozens of other conveniences. There's no dirt, delay and inefficiency with a French Dry Battery—the "juice" is there right on the job ready for instant use.



These marvelous batteries are scientifically constructed packages of electricity. They are *special* purpose batteries built for a *special* job. Thousands of auto owners insist on the French "Auto Special"—the dry-cell battery with the *blue* label. The *green* labeled French Telephone Cells are for all household uses.

Long-Life Batteries

French Dry Batteries give a strong current for a *long* period. Ordinary batteries give a weak current for a *short* time and then quit altogether. French Dry Batteries *save time* for a *long time*. Your dealer will tell you the particular French Battery you need. If you want to know more about these wonderful French Dry Batteries and how they can help you do your farm work, send your name and address on a postal. We'll answer by return mail. Write tonight.

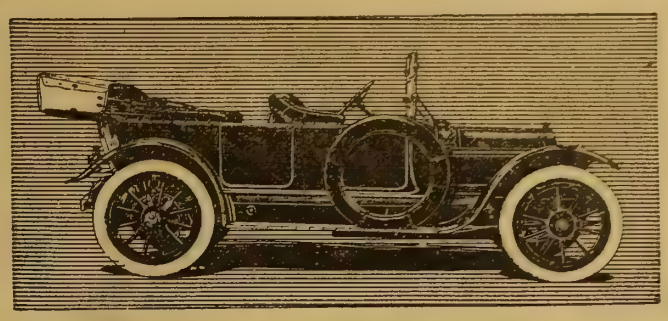
LANPHER



The Lasting Car of Hidden Values—the Case Forty

The Sign of Mechanical Excellence the World Over

Here is a car that will outlast your expectations. It is built for extremely hard usage on American roads. A car that is still young when average cars have served their time. We put hundreds of dollars into the vital parts that do not show to the naked eye. But years of service bring them to life.

When you buy a car, satisfy yourself on this point. Do not go merely by looks. Insist upon a car with refinement equal to that of the Case Forty. But—more important—get the vital hidden values that are so dominant in the Case.

You must take some one's word, either owner's or maker's, as to how long a car will last. Take our word for the Case "40" until you have proved it out on the road. The word of a company which for 70 years has manufactured honest, reliable machinery is at stake in them.

The Case Forty, at its price, is impossible except for a concern such as the Case Company. We save because we had an immense distributing organization for Case cars before we began their manufacture.

We save through factory economies that are beyond the reach of others. And what we thus save provides these extra values.

CASE FORTY

The Car With the Famous Engine

Westinghouse Electric Starter; Westinghouse Electric Lighting System for all Lamps; Side and Tail Lamps, Combination Oil and Electric; Warner Auto-Meter; Electric Horn; Rain Vision Ventilating Windshield; English Mohair Top, Side Curtains and Cover; 37x4½-inch Tires; Firestone Universal Quick-Detachable Demountable Rims; 124-inch Wheel Base; Three-Quarter Elliptic Springs; 4½x5¼-inch Cylinders; Brown-Lipe Transmission; Timken Full-Floating Axle; Rayfield Carburetor with Dash Adjustment; Bosch Magneto, Dual System Single Point Ignition. The usual Tools, Tire Repair Kit, Jack, etc. And in addition, Extra Tire and Tube on Rim, Extra Tube separate, Tire Cover, Tire Chains and Handy Work Light on long wire.

5-Passenger Touring, *Fully* Equipped, $2,200

Don't Go Through ANOTHER Season Without It

Perry FRESH WATER System

JUST TURN A FAUCET — HOT OR COLD — HARD OR SOFT — FRESH FROM THE WELL

You simply can't afford to do without a Perry Water System any longer. For health's sake — for comfort sake—for profit sake, don't go through another season without one, especially when it costs so little to operate and such a modest amount to install.

For the Home:

Just imagine the pleasure and convenience of having water, FRESH FROM THE WELL—in any part of the house by simply turning a faucet. Hot or cold—hard or soft. Think of the thousands of steps and the drudgery it will save. No water to carry — no cold trips to the well — no more frozen pumps.

For the Barn:

A Perry System soon pays for itself by furnishing plenty of water, at just the right temperature. Stock will drink more — thrive better — cows give more milk — make you more profit. For fire protection alone, it is worth many times its cost — will throw a heavy, steady, continuous stream.

Perry Water System

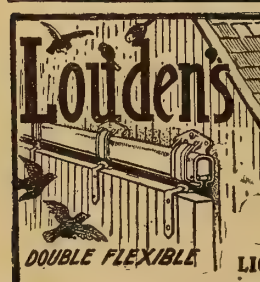
WRITE FOR FREE CATALOG TODAY

Tells how you can install it yourself—anywhere in small space—use your gas engine for power without moving it or interfering with its other work — completely solves your water supply problem, summer or winter. Absolutely dependable — fully guaranteed — over 4,000 in use. Estimate of cost gladly furnished. Write for free catalog NOW—see for yourself the great advantages of this system.

United Pump & Power Co. 486 Colony Bldg. Chicago, Ill.

NO STALE WATER — NO TANKS TO FREEZE

Louden's Bird Proof Barn Door Hanger
Never Clogs—Never Balks



PERFECT AND PERMANENT.

And the only enclosed track that automatically adjusts itself to lie close to the building.

DOUBLE FLEXIBLE

LIGHT RUNNING, roller bearing, tandem trolley hangers, operate inside of an enclosed track. Always runs easily, never binds. Can't get off the track. Can't be clogged by birds, ice or snow. Can't be broken by stock crowding through half open doors. Carries the heaviest doors. Lasts as long as your building—always on the job. *Costs no more than the ordinary makes.*

Buy them at your dealer's or write us for Free descriptive matter.

We make the famous LOUDEN Hay Tools, Sanitary Steel Cow Stalls and Stanchions, Litter and Feed Carriers—everything for the barn. Free catalog describes them all.

SEED CORN

All my corn gave perfect satisfaction last year. Quality better than ever this season. **REID'S Yellow Dent Exclusively.** Bred for high yield without sacrificing early maturity. Also bred for highest feeding value which places it in a class by itself. We feed thousands of bushels of corn each year and know it will go farther in the feed yard than any other corn. Ninety-eight to 100% strong germination. Shipped on ten days' approval. Price $3 per bushel either ear or shelled and graded. Crated 35 cents extra. Limited supply. Order from this advertisement or write for my free Corn Book. Address

ARCHIE G. MERRITT, Route 2, KELLERTON, IOWA.

HORTICULTURE

GROWING RADISHES.

Radishes in order to reach their greatest perfection must make a rapid growth and in order to do this they must be grown in warm, light, rich soil; one that has been manured the previous season is preferable to one that has been manured at the time of sowing as in the latter case they are apt to be attacked by a small grub and become "wormy" as it is commonly called. Rank manure not only produces a sharp, pungent flavor, but also induces a coarse, woody growth. The first sowing may be made as early in the spring as the ground can be worked into fine, loose condition.

Make the soil very fine and level and sow the seed thinly in drills fifteen inches apart, covering the seed one-half inch deep. Many people make a mistake in sowing the seed too thick; when up the plants should stand at least one inch apart so as to give each plant room enough to develop without being crowded. For a succession sowings should be made every two weeks throughout the season. The size of the sowing depends upon the family. It is much better to make frequent small plantings than to make larger sowings farther apart, as in order to have the finest quality the roots should be pulled as soon as large enough, for if allowed to remain in the ground too long they will become hollow and pithy.

Good radishes cannot be grown in hot, dry soil; therefore if crisp, tender radishes are wanted during the summer months the beds must be partially protected from the sun.

The winter varieties should be sown about the middle of July in drills fifteen inches apart and when the plants are up they should be thinned out to stand four inches apart in the rows.

DRY ROT OF POTATOES.

To the Editor of The Homestead:

The Nebraska Experiment Station has just issued Bulletin 134, on "A Dry Rot of the Irish Potato Tuber."

For several years the department of agricultural botany has been engaged in a study of Irish potato dieases in Nebraska. Among these the dry rot of the tuber is one of the most important. Buyers and commission men have reported losses, during storage, of from 20 to 60 per cent due to this dry rot. In fact the most important feature of this dry rot is the fact that it forces the immediate sale of the crop as soon as dug. This tends to demoralize the market and places the grower at the mercy of the buyers, since he is himself afraid to store his crop and wait for better prices.

The dry rot here described is a strict tuber rot affecting mature tubers only. Neither the stems nor the young tubers are ordinarily in the least affected. Natural infection is known to occur solely through wounds produced in the process of digging or subsequent handling. In many cases this rot secured a foothold through wounds produced by scab-producing animals of certain sorts and perhaps even through scab spots due to fungus parasitism, though the latter method is certainly very rare if we may judge from the laboratory experiments.

The rotting is rather slow, and in general within four to six weeks from one-third to three fourths of the tuber is destroyed. The epidermis of the rotted portion becomes slightly wrinkled and usually has a characteristic bluish color. On account of the rapid destruction of the underlying tissues the surface over these areas soon becomes distinctly depressed.

The rot may make its appearance at any point on the surface of the tuber, though more commonly perhaps at the bud end of the tuber. There is no watery degeneration of the tuber unless other organisms gain entrance, so that this is in fact a dry rot.

Numerous inoculation experiments have shown that this dry rot is caused by a parasitic fungus, not previously described, for which we have proposed the name Fusarium tuberivorum. At the same time it has also been demonstrated that this dry rot fungus does not cause the injury to the leaves and stems often referred to as "blight" or "wilt." In other words, the present dry rot of the tuber is not connected in any manner with diseased conditions of other parts of the plant.

Extensive experiments have been conducted to learn if any treatment might be applied before the potatoes were stored that would reduce the amount of this rotting.

These experiments have clearly demonstrated that dry rot may be held in check through treatment of the tubers before being placed in the

storage cellars. For this purpose the best results were secured through the use of either formalin dip, formalin vapor, or the lime-sulphur wash. Not only did the tubers in these lots show a very small percentage of dry rot, but they were in excellent condition otherwise when removed in April. The storage time, it should be remembered, employed in this experiment is longer than would ordinarily be employed by the average farmer and this gave the treatments a severe test. Under ordinary farm conditions the development of the formalin vapors is not easily secured, and therefore we would particularly recommend the use of the formalin dip as the easiest method to employ and one that should give excellent results in practice.

E. A. Burnett, Director.
Lincoln, Neb.

HOW THE AGRICULTURAL COMMISSIONER HELPS.

(Continued from page 3.)

through its co-operative farm demonstration agents, established girls' canning clubs by way of encouraging the people to make better use of their opportunities. As a means of advancing this movement, the company represented by the writer has equipped a canning demonstration car which contains practically every type of canner adapted to use in the home, also a number of other facilities for utilizing the surplus products of the farm. This car will be kept on the line during the fruit and truck-growing season, spending two or three days in one place in order that the farmers and their families may visit it and witness practical demonstrations conducted by a competent man in charge.

One important phase of the work of a railway agricultural commissioner is the dissemination of practical information upon the proper methods of growing the more important crops. This demand is being met by the use of pamphlets which are sent, free of charge, to the farmers along the line of the railway. These publications or bulletins are similar in many respects to the Farmers' Bulletin series of the United States Department of Agriculture. However, they are more brief and adapted especially to the conditions which exist in the territory adjacent to the railway. Throughout the South there is a great need for improvement in the breeds of live stock, also for information regarding feeds for farm animals. "Where can I get some good seed corn?" or "Where can long staple cotton seed be procured?" "What shall I plant for winter pasture for hogs?" "What does a silo cost and which kind is best?" "What crops are best for silage?" These are some of the questions that the agricultural commissioner is asked as he goes about among the farmers along his line of railway.

The agricultural commissioner is frequently invited to attend meetings of farmers, business men and commercial clubs and to discuss various topics of interest at these gatherings. He is also expected to attend all of the state, county and local fairs and expositions in his territory, and in a few instances he is called upon to act as judge in the baby show, or some similar contest, at these gatherings. The commissioner who is wise, however, will concede that the babies are all so perfect that it would be impossible for him to decide and beg to be excused from acting as judge in any class of exhibits or contests. The agricultural representative of the railroad is frequently called upon for assistance in the matter of finding suitable markets for farm products. The formation of local growers' organizations for the improvement of methods in the growing, packing and marketing of farm produce is also encouraged. New crops are introduced and improved varieties of standard crops are constantly being sought for.

There is no method of teaching so effective as a practical demonstration. The average farmer may read or be told a hundred times that frequent shallow cultivation conserves moisture during drouth and yet not learn the lesson, but let him be shown a practical demonstration, where results are actually obtained and he will begin the practice on his own farm. For this reason demonstration farms are of value and form a part of the working facilities employed by the agricultural commissioners of the railway. In some cases these demonstrations are conducted on regular farms, the farmers themselves doing the work according to a plan furnished by the railway. In this case the railway guarantees that the results shall not fall below the general average for that crop in the immediate section. A regular demonstration farm has the advantage that work of a more permanent nature and which extends over a period of several years may be conducted. The farm can also be made more or less of a show place and in that way attract the attention of many people who would not otherwise become interested.

One important feature of the work of the agricultural commissioner is that of bringing about a general improvement of the home conditions on the farm; to lessen the burden of women's work in the home by teaching the people to provide their homes with economical labor-saving devices; to induce the farmers to expend more thought and money upon general health and housing conditions and to the comforts of life generally.

Such are the duties of the agricultural commissioner of a railway. His work is among the people along the line of the railway which he represents. The writer is one of the few men engaged in this line of work who are provided with a special or office car for use in visiting the various points in their territory. This makes it possible for him to carry a complete office on the road and to attend to correspondence and conduct business as he goes from place to place.

In the development of its agricultural resources the railway represented by the writer employs special men to do specific work. One man devotes his entire time to fruit and truck crops. Another is being employed in live stock and dairying. A third man is engaged in the preparation of exhibits and representing the company at fairs and other exihibitions. Others are employed as superintendents of trial and demonstration farms and a clerical assistant to the commissioner is on duty in the headquarters office to keep up with mail and routine business. Several of the commissioners are very ably assisted in their work by their wives, one of whom is skilled in photography and makes most of the pictures that her husband uses for illustrating his bulletins. Another has taken up the problem of interesting the women in their farm homes and the development of the girls' canning and poultry clubs.

Plans are now being made to organize an association to consist of the men who are engaged in agricultural development for the various railways. This association will have for its object the greater efficiency of its numbers through co-operation and the general improvement of farming conditions, which will ultimately result in increased revenues for the railway. It is often difficult to estimate the actual results of the campaign for agricultural development being carried on by the railroads. Like any educational movement the real results may not materialize until a new generation shall have come upon the field of action. The seed being sown at present is sure to yield a harvest in the future in the form of better farming methods, better houses, a more contented people and the general prosperity of the country.

If the clover meadow is nipped too close in pasturing, the crop of seed will be shortened.

The illustration shown above is a kodak picture of the great boar Dusty Critic 2d, the sire of the 1912 champion Critic B. B. F. Danford, Ord, Neb., is the gentlemen that fitted Critic B., and Dusty Critic 2d is now owned by him and Mr. Dewhurst. Dusty Critic 2d will probably be shown at the Nebraska State Fair. Critic B. was champion at three or four of the leading western fairs last season.

BUG DEATH

Kills all bugs and worms that eat the leaves of any plant or vine: also prevents blight.

CONTAINS NO ARSENICAL POISON AND WILL NOT INJURE THE FOLIAGE.
Give it a trial this year.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

WARTS.

Will you kindly advise what will take warts off of cows' teats without hurting the cow?

Rub the affected parts once or twice a day with best castor oil or fresh goose grease and the warts will disappear after a time. Large warts, with narrow necks, may be snipped off with scissors, a few at a time, and the bases cauterized with a lunar caustic pencil.

PRECOCIOUS MILKING.

I have a large, gray Percheron mare eight years old in foal, bred July 6th. She has a large bag and the milk is running out. She seems to be somewhat stiff and sore in the morning. Have been working her about a week. She is fed sheaf oats, good wild hay and eight ears of corn three times a day.

In such cases an examination of the womb should be made and if it is found to be open the foal is ready to come away and will come away if labor pains are induced by the veterinarian. Where this is not done the foal dies and may be retained and become mummified in the womb; or it may be born later and so weak that it quickly succumbs. If the womb is not open cut down the feed and increase the work to check flow of milk. Rub udder with camphorated oil twice daily.

LOSS OF PIGS.

I had a bunch of 125 March pigs which grew and did well until ten days ago when their eyes would shut tight and they would go around blinking for three or four days, then die. They had a good appetite and ate until they died. Would it be safe to put other pigs in the hog house after disinfecting it, as I have other sows to farrow soon?

There is nothing in your description to show what caused death. Cholera scarcely would be present in such young pigs; but a veterinarian certainly should have been employed at once to investigate and determine the cause of death. Change the sows onto new ground and let them farrow there. Also change the feed, as it is quite likely that errors in feeding have given rise to the trouble.

OVERHEATED MARE.

Five-year-old gray mare is in good shape, but cannot stand the heat when worked or used on the road. Have been using her to plow this spring and I cannot go a whole round before she begins to pant and she was the same way last year. She does not seem to sweat.

She has been overheated at some time or another and never will be perfectly fit for work. Do not feed any bulky feed at noon or work her soon after a meal. Keep her clipped and shade her head when she is at work in the sun. Allow drinking water often. Mix together two parts granular hyposulphite of soda and one part each of powdered nux vomica and ground gentian root and of this mix one tablespoonful in the feed night and morning until she is doing better, then reduce to one dose a day and finally let her do without the medicine.

FITS.

Our four-months-old calves have fainting spells which last for five or ten minutes at first, after which they stand up and look around. They begin to get lighter and finally can't get up again and die in about a week. Have lost two and another one is sick. We feed them as many oats as they will eat and plenty of hay, with water to drink.

Indigestion is the cause of such fits or convulsions and calves die of apoplexy during such attacks, blood vessels rupturing in the brain. Instead of feeding whole oats, feed bran, cornmeal and flaxseed meal, or ground screened oats. The main feed should be sweet skim milk fed three times a day.

INFECTED SOW.

About two weeks ago one of my sows had pigs, all of which had to be taken. She was sick all day and night and since then she refuses to eat; just drinks slop and lies down most of the time. She was fed corn and ground feed with tankage before she came in.

There is septic inflammation of the womb from infection following the use of forceps, or afterbirth may have been retained. Chance of recovery is poor. Once a day flush out the vagina with a gallon of lukewarm 1-5000 solution of permanganate of potash. Dissolve a dram of granular hyposulphite of soda in her slop twice daily.

ABORTION.

(1) Last fall a sow that was raising a fall litter took sick for a few days and then she peeled off from her ears back to her tail, half way down her sides, taking as much as one-half inch of the fat along in many places. She always eats good and is mostly healed up, but I would like to know what I could put on to heal her up faster? Have used nothing but hog dip. What was the cause? (2) Last January I bought a gilt that lost her litter a week after I got her. She was in a pen adjoining the rest of my herd. After that five of the others lost their litters. They were all in good thrift, fed on corn, oats and a warm swill in the morning of bran, shorts, tankage and about seven pounds of oil meal for twenty head. They had plenty of exercise. Will it be all right to breed them for fall pigs and use the same boar on others?

(1) Sunscald from pasturing rank growths of wet rape sometimes causes skin trouble, or it may come from an acute attack of poisoning or indigestion. The case described is unusual and we are unable to give a confident opinion as to the cause. (2) Overfeeding and irritants in the feed most likely caused the abortions and the new sow was not probably to blame. It is a mistake, however, to let a new bought animal at once mix with the home stock. Pregnant sows do not need such rich feeding as you have been giving. Let them have plenty of alfalfa hay and roots, along with a light slop not containing corn or tankage. Make the sows take plenty of exercise. Breed the sows again to same boar.

E. Myers, President, E. Myers Lye Company.

No More Hog Cholera —No Hog Worms— Bigger Pork Profits

By Feeding Daily Merry War POWDERED Lye

Are you going to wait until there is an outbreak of hog cholera in *your* neighborhood—when it spreads from herd to herd killing off hogs like flies—or will you take steps *right now* to *prevent* any possible outbreak in *your own* herd? You need have no fear of hog cholera wiping out *your* pork profits if you will feed a little *Merry War POWDERED Lye* twice *each day* with the regular rations. *It costs only 5c per month per hog,* and thousands of farmers can tell you it *prevents* hog cholera. This awful disease may be raging in a neighborhood, but hogs that are on a *Merry War POWDERED Lye* diet, are conditioned against it, as surely as a vaccinated person is protected against smallpox. Besides it destroys hog worms, keeps the digestion in such perfect condition that every pound of feed is changed into firm flesh thus preventing feed waste and greatly increasing pork profits.

The use of *Merry War POWDERED Lye* as a hog remedy, conditioner and fattener is *not* an experiment. It is a *specially prepared, powdered* lye that has been *tried* and *proven safe* and *effective* for those purposes. Full directions on every can. Don't experiment with an untried, old fashioned, ordinary lye. Get *Merry War POWDERED Lye*—the *time-tried* remedy that *actual experience* has *proved* to be the safest, surest preventive of hog cholera the world has ever known.

These Hogs Could Not Take Cholera

"We have had hog cholera all through our district. Those who have been using *Merry War POWDERED Lye* have missed it. One man in particular, who buys it by the case, has cholera all around him, but so far his hogs have escaped." C. M. COOPER, Proprietor of "The Right Place" Dawson, Neb.

Make a test for yourself. Merry War POWDERED Lye comes in 10c cans (120 feeds per can). *It is convenient to buy in case lots—4 dozen cans for $4.80 at Grocers', Druggists' or Feed Dealers' Everywhere. There are no substitutes. WE WILL SUPPLY YOU DIRECT, $4.80 FOR 4 DOZ. CANS, IF YOUR DEALERS WON'T SUPPLY YOU. Write for our valuable booklet "How To Get The Biggest Profits From Hog Raising." Sent FREE for the asking.*

Which Kind Do You Want?

Don't Let the Squirrels Take Your Corn

It is not a hard matter to get rid of them if you go at it right. No need of having your corn stand spoiled and having your fields cut up by gophers when a few minutes time for several days will kill them off. It's easy to poison them.

USE GOPHER DEATH—TRIAL PACKAGE ONLY 50c

Enough to kill a good many squirrels, gophers, prairie dogs and ground hogs. Comes in tablet form—easy to use—sure in results. 1,400 tablets $1.25. The squirrels and gophers eat them greedily. If gophers are cutting up your fields and squirrels have taken possession of your farm, our Gopher Death tablets will rid you of the pests. **Don't delay.** Ask your druggist for it or to get it for you—if he doesn't, send direct. You can't afford not to try this safe, convenient to use, effective and reliable poison. Write today. Address all orders to

FORT DODGE CHEMICAL COMPANY, Dept. W, FORT DODGE, IOWA

Fine Prize Pony Given Away

You see in this picture a boy riding one of the splendid prize ponies I am going to give away. In other parts of the picture are the faces of several other boys. They are rather hard to find, but by turning the picture about you can see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send your name and address so I can tell you all about the contest in which you can win a beautiful pony and many other prizes.

1500 Votes Free

I will send you a special coupon good for 1500 votes toward the pony. All you have to do to get this coupon is to send your name and address at once.

A. M. Piper, 600 Popular Bldg, Des Moines, Ia.

E. Z. HOG CATCHER
catches any size with one pull. He walks out freely. Free circular.

THE HOME

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Postoffice Box 639, Aurora, Missouri.

WITH THE EDITOR.

The reception accorded a new gospel depends largely upon the character of its forerunners and the quality of their work. In both these respects fortune continues to favor the progress of the Montessori system of education; the latest volume presented to the American public, "A Guide to the Montessori Method," is from the pen of Ellen Yale Stevens, whose training, experience and position in the educational world entitle her to a respectful hearing.

Not content with reading about the Montessori method Miss Stevens went to Rome and studied under its founder. Having been educated in the scientific spirit, having knowledge of Italians and securing the privilege of intimate association with Dr. Montessori herself Miss Stevens was in a position to properly survey and to critically examine the workings and the results of this new method of scientific pedagogy as illustrated by the development of the little children in the Casa dei Bambini in Rome. It is the results of her observations that she presents in "A Guide to the Montessori Method," a book of 240 pages, published by Frederic A. Stokes Company, New York City.

The result of Miss Stevens' investigation was that she became an ardent admirer of Dr. Montessori and the system that she enunciates. It was to interest Americans and to facilitate the extension of the system in this country that she wrote this volume. In it she tests the Montessori theories and methods by the principles of modern child psychology and carefully interprets and summarizes it. In so doing she shows that the method's fundamental principle is "to so liberate the life force within the child that he can conquer his environment."

"A Guide to Montessori Method" was written as an aid to teachers and parents; for their benefit it indicates the lines along which the usual actions of parents and teachers should be modified in order that the children may secure the full benefit of the system. Miss Stevens relates her experience with a little summer school she held; she also draws attention to the fact that it is necessary that mothers and teachers should thoroughly understand the principles which lie at the foundation of the method before attempting to use the scientific material by means of which the powers of little children are being more accurately developed to the benefit of their mental, moral and physical natures than ever before.

Mothers and teachers who are wide awake and ambitious for the best interests of children will study "The Montessori Method" as expounded by the founder and translated by Miss George; with it they will do well to use the excellent "Guide" prepared by Miss Stevens.

HOME AND HOMEMAKING.

DAFFODILS.

I wandered lonely as a cloud
That floats on high o'er vales and hills,
When all at once I saw a crowd,
A host, of golden daffodils,
Beside the lake, beneath the trees,
Fluttering and dancing in the breeze.
The waves beside them danced, but they
Outdid the sparkling waves in glee:
A poet could not but be gay
In such a jocund company.
I gazed and gazed, but little thought
What wealth the show to me had brought;
For oft when on my couch I lie,
In vacant or in pensive mood,
They flash upon that inward eye,
Which is the bliss of solitude,
And then my heart with pleasure fills
And dances with the daffodils.
—Wordsworth.

ATTENTION, HOUSE MOTHERS!

If a woman wishes to keep happy, healthy and young looking, she must get away from the drudgery of housework. It must be changed into something that gives pleasure and that leaves some time for mental improvement, for visiting her neighbors and enjoying her family. To do this the work must be systematized. Each operation must fit into its place. No useless steps must be taken. The mind must save the hand. The amount of work that can be done in a given time depends not so much on the strength of the woman as on how well she is able to plan and carry on her work.

FOR THE COOK.

If you want your spinach to have a flavor that is truly appetizing, just cook with it an onion, finely chopped. Choose one with a tender, green top, if you can get it, and you will hardly recognize the dish as spinach, so improved will be its flavor. That is the way I cook my turnip greens, too. I also cook with them a small piece of salt pork, which is excellent seasoning.

Whether broiled or fried, veal cutlets or chops are decidedly improved if allowed to stand half an hour after being sprinkled with salt and lemon juice and rubbed with soft butter. When cooking by the latter method, egg and crumb ten minutes before they are needed; drain on manilla paper the instant they are done, and serve on a hot platter. Salt-pork fat is better than butter for frying.

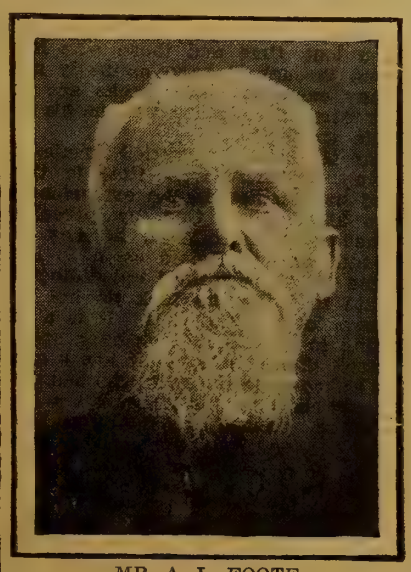
The thin cloth bags that sugar, salt and flour come in make excellent dust cloths. The difficulty is getting the letters and printed stuff out of the bags. This is easily done if the bags are first soaked in a bit of cold water and then boiled in a strong solution of baking soda. The soda takes out the lettering; the bags should be ripped open before washing. Then trim so their edges are straight and hem them on the sewing machine. They are soft and easily kept clean—two requisites for a good dust cloth.

The French braise a great many of their cuts of beef, that is, roast them in the pot. For this purpose they generally chose a piece of rump that is not especially tender. They lard it and make it tender by cooking a long time slowly and steadily. Onions, carrots and herbs are usually added to the beef to flavor it a la mode. This may be a comparatively cheap piece of beef. It is not often more than is needed for one meal, but if it is, it is excellent cold, and may be warmed over in its gravy to advantage.

To make the white sauce, which adds zest to so many Lenten dishes, put a pint of milk, a small slice of onion, and two sprigs of parsley into the double boiler. Blend together in a saucepan four, tablespoonfuls each of butter and flour, then add gradually to the boiling milk, stirring constantly until smooth and thickened. This will take about eight minutes. Season with salt and pepper, strain and serve.

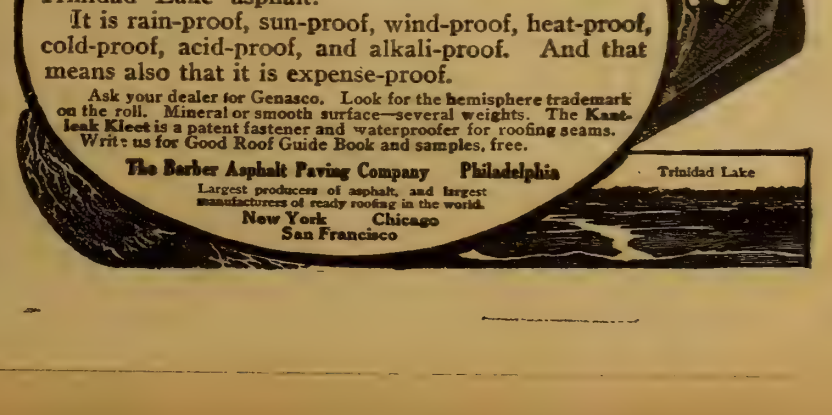
AMONG OURSELVES.

If we had known that January 24th of this year was the twenty-fifth wedding anniversary of our friends, Mr. and Mrs. A. L. Foote, of Fayette, Ia., we certainly would have helped them celebrate by having their pictures then. Fortunately, it is never too late to offer congratulations and good wishes. We herewith do both. When a man reaches sixty, a woman fifty, the very best of life may be before



MR. A. L. FOOTE.

them; we trust it may be so in this case. Mrs. Foote has not been in good health for a couple of years, which is, perhaps, why she is less known in our circle than Mr. Foote, but ill health, like ill fortune, is a passing matter;



It Costs You No More
To Have Safe, Dependable, Brilliant, Convenient Light

Facts show that Prest-O-Lite is the safest, most dependable road light for any vehicle. With the addition of a "push-the-button" lighter, it offers every point of convenience of any other system. You can light and extinguish gas lamps from the driver's seat, if you wish, with the utmost ease and convenience. If anyone claims that any other lighting system "costs less to use than Prest-O-Lite," ask him if he can get a written guarantee to that effect.

Ask These Questions Before Buying.

Will you guarantee to substitue Prest-O-Lite if your lighting system proves troublesome, unreliable and expensive?

Will you guarantee that this car is as speedy, as good a hill climber, as easy on tires, as inexpensive to run, as it would be if equipped with Prest-O-Lite?

Will you guarantee this lighting system to be as reliable, as free from repairs, as efficient and as economical as Prest-O-Lite?

If you cannot get these guarantees, **in writing**, you had better get Prest-O-Lite on your car.

Prest-O-Lite Saves More Than Its Cost

Size "E" Prest-O-Lite costs only $15. This is an investment, as it can always be sold for about this price and never becomes second hand. The exchange fee is no greater than carbide to give you an equal amount of light from your lamps using a generator. New lamps are not needed if you are now using a generator, and even the same tubing can be used.

In its safety and protection, Prest-O-Lite saves you more than its cost. One accident at night might cost you many times the price of Prest-O-Lite. One repair to any complicated lighting system might easily cost you more than years of Prest-O-Lite Service.

Try It 30 Days FREE

Any Prest-O-Lite dealer will equip your car with Prest-O-Lite and let you use it 30 days. If at the end of that time, you find any of our claims untrue, or are not satisfied in any way, he will take it off your car, refund your money and the 30 days' use is yours absolutely free.

Prest-O-Lite Exchange Service

If you have any doubt as to obtaining Prest-O-Lite exchanges quickly or conveniently, consult your nearest dealer or write to us. We will gladly arrange to give you prompt service. Our literature on Prest-O-Lite and our automatic lighter with full particulars and "Light on the Lighting Problem" giving the **real facts** on **all** lighting systems are yours for the asking.

Prest-O-Lite for Emergencies

Prest-O-Lite is invaluable should night catch you with some important bit of farm work unfinished. It can be set up on the spot in a few minutes, giving you light as bright as day. This one feature should make Prest-O-Lite invaluable to you.

When Writing to Advertisers Please Mention The Homestead

and when two have weathered the storms of a quarter of a century together their happiness does not depend upon external things.

Mr. Foote's connection with our paper is of long standing. He was a

MRS. A. L. FOOTE.

contributor in the old Institute Special days and when it became a thing of the past he transferred his interest to the Home Department, to the pleasure of our circle members. The letter asking Mr. Foote to write something to accompany the photographs followed him out to Oregon, where he was called by the death of a brother. It was while still there that he jotted down something about old times in the state of his adoption:

Forty-three years ago I came from New York to northeast Iowa. Neighbors of the American class were few and far between at that time, but there were four families almost in a circle in our neighborhood. Several other families five or six miles south, and some a few miles east. Among them there was a goodly number of old country people. Wild land was cheap. Good prairie was as low as $10 per acre. Cattle ran at will over the prairies and the man that raised grain had to build fences for his neighbor's stock. Houses were small, most people had straw barns and very few had a spring wagon. Most people raised wheat as long as it would pay expenses, but about one-third of a century ago wheat failed so northeast Iowa had to quit. It was the best thing that ever happened to the farming interests of northeast Iowa, for the farmers went to raising corn and hay and keeping better horses and hogs. Then they paid for their farms, and built large barns and fine houses and now they can show the best improved farm homes that I know of in the United States and I have been five times from Iowa to New York and Washington, D. C., and I have been over three railroads to and from Iowa to Portland, Oregon. The Iowa farmer that has not got a spring buggy now is certainly an exception; many have automobiles, but here is one man just past sixty-four years old that has no use for an auto. A good, well-broken driving horse is good enough for me. According to what some have written in the past six months for the Home Department there are many people that do not try to enjoy the many blessings God has given us. I think that the last fifty years has been the best fifty years of the world's history, but it seems to me that men and women are wandering farther from God.

In a new country twenty-five years is a long time and those who have lived through it have naturally seen many changes. Our thanks are due our friend for sharing with us his old-time memories.

As Mr. Foote has varied farming by doing carpentry from time to time, and has furthered the extensions of the kingdom of God by preaching when occasion offered, he has had a full life and would seem to have done his share toward upbuilding the state in which he took up his residence as a young man. It is a fine thing to be able to look back upon a useful life. The joy of it has a quality unknown to the man who has nothing to show for his labors but a bank account. Riches may take unto themselves wings, but the character developed by a life of usefulness and unselfishness is a possession of which nothing can rob its possessor. Again we express the hope that the coming years will be kind to Mr. and Mrs. Foote.

A little talk about household appliances by Mrs. Martha M. K. comes next on the program:

In reference to household conveniences and labor-saving appliances we class the washing machine as very important, as work of this kind is so hard and has to be repeated so frequently. When we were first married mother said she would give us our choice of either a washing machine with wringer or a bureau. We chose the washing machine, and, strange to say, never repented, but to finish out this part of the story, when we got to our prairie home we took four soap boxes, of equal size, stacked them up and had them slatted together and firmly nailed. They were papered on the outside and in front we hung a curtain. So we had the bureau too. A sewing machine stands high in the list. It sings a cheerful song, but without it a tired woman sitting down to sew seldom sings. After these comes the cream separator. Of course, an old-fashioned skimmer only costs five cents, while a separator costs immensely more, but after you have used the separator for a time and become thoroughly acquainted with all its desirable qualities you will never hunt for that old tin skimmer, nor even mention it, save in ridicule. The kitchen range is an article of exceeding importance and should always be kept in perfect trim. For warm weather have a gas stove if gas is available, otherwise a gasoline stove can be made to fill its place—any of these will go a long ways toward "saving mother." In the same catalog is the fireless cooker. The kitchen porch should be enclosed with wainscoting below and wire screen above. Here in warm weather the vegetables and fruit can be prepared and the washings done in great comfort with little or no annoyance from insects.

I am glad that Mrs. Martha M. K. mentions the screened porch especially at this time. I do so hope that every woman who has no screened porch will make an effort to secure one this spring. A couple of posts and a few laths will make a frame if nothing better can be managed and by planting quick-growing vines shelter will soon add to the comfort of the screening. It, by the way, can be mosquito netting if the purse will not admit of the wire screening. The thing is for every woman to resolve to have a place out of doors where she can perform certain of her labors and then get the kind of porch which her circumstances permit. I hope to hear of a harvest in this direction as the result of to-day's seed-sowing. And won't some of the friends who have porches tell us about their comfort in them? Please do.

L. H. Gordon comes with a question:

Why is a girl of age at eighteen and a boy not until he is twenty-one? Is it because the girl is the smarter, or that the boy owes his father and mother more labor?

Some of the friends have knowledge and ideas about this matter upon which L. H. Gordon asks information. We shall be pleased to have an expression of opinion.

THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Aunt Mary, Hawley, Minn.

LIFE AND THE WEATHER.
(First Prize.)

Vashi, your letter was grand. You are a poet, whether you can write poems or not. If every girl and boy could see beauty in country life as Vashi does there would be a less number leaving the delightful country to live in a noisy city. I am glad that so many of our members are nature lovers. Most people, when looking at a beautiful sunset, or a clear woodland pool, see the thing itself, but do not see the beauty in it. I think they miss the best there is in life.

Bedouin, please tell your friend that went with you on your walk to write a letter for us soon. I, and I am sure many others, will be glad if she will join our circle. Katheryn, your poems are splendid. They have such good lessons in them. Come again and again, Ted, you are about the only boy that writes to this page now. Keep it up, and perhaps some other boys will take courage and follow your example. I enjoyed my walk with you in North Dakota just fine. Some time soon I am going to describe a walk I took,—not a cross-country tramp such as Bedouin took, but a walk in the woods. This week has been what some people call a "dreary, disagreeable week." Dark, threatening clouds have been hanging low in the sky, and a steady patter of rain has been heard. But today the sun is shining so bright, and everything is fresh and beautiful. How like our lives the weather is!

If you only knew what pleasure the

Victrola

brings into your home, you wouldn't be without one for a single day.

Shinn Lightning Rods

Now protect more valuable property than any other rods made, because they are scientifically perfect. Made and sold under $75,000 bond.
ASK YOUR DEALER
For Shinn rods, the kind that are put up by experts and work inspected by our state inspectors. If he has none don't accept any substitute but write for full particulars about guarantee and for catalog.
W. C. SHINN 100 16th St., LINCOLN NEBRASKA

For weeks it may seem as if your whole life will be dark and lonesome, and clouds of trouble always hover over your head; but at last sunshine comes into your heart, and the little trouble clouds float slowly away. We appreciate more the joy of living after having days of trouble, just as the day seems so much fairer after a week of dark days.—Morning Glory, Ia., age 16.

Spring.
(Second Prize.)

What does Spring mean? To some people it means mud and water and nasty weather. To some people it means new life. Why, there are all the birds again! How we looked for the first robin! The children shouted and the aged people smiled when the first robin redbreast was spied. What do the brooks tell us? Why, it means new life to them. The chains of winter are torn away by Spring and frees the brook. Listen to a brook as it runs in its course. It sings and murmurs as it flows, sometimes loud and then very sweet and low. What do the tiny blades of green grass, the bushes and trees tell us? They all seem to shout "Spring! Spring!" Ought we not to be thankful we are able to enjoy Spring? It is but a page of Nature, but how beautiful it all is! We can only say as we view the new life Nature puts on, "How beautiful is God's work!" Let us all try to be a living part of Spring, too, and as we breathe the pure spring air, also breathe in new life. We cannot help but be happy like merry birds if we try.—Jewell, Wis., age 16.

The Lost Lamb.
(Third Prize.)

One nice summer day as I was strolling through the woods, I found a little lamb whose foot was hurt and its mother had left it, so I picked it up and took it home and bathed and treated its foot, and soon it got well. After a month or so it could run and jump like all other lambs, but it would follow me all the time, no matter where I went. It was pitiful to hear it bleating when I had to lock it up when I went any place where I did not want it to follow me. One day I locked it up, and I went to town; and while I was gone the lamb got out and went to look for me. She could not find me at home, so she went in the woods where I found it, and stayed there. She thought I might come after it again. So when I came home I asked mama where the lamb was, and she said she did not know, so I went to look for it. By and by I went to the woods to look for it, and soon I heard it bleating. So I went over to where the sound came from, and sure enough, there she was. But, my, how overflowing with joy she was to find me again! I could hardly walk home, for the lamb was at my feet all the time. But she was the best friend I ever had. The following year we moved to town, and papa said I had to part with my lamb next week, for he sold it to a man five miles out in the country. So the next week the man came and took the lamb. My, but if my heart did not feel like breaking, what did? I was not like the same girl afterwards for a long time. Papa said he would give me five dollars for the lamb, but it seemed to me that no money could take the place in my heart that the little lost lamb did.—Evangeline, Minn., age 10.

PLEASANT FIELDS OF HOLY WRIT
Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON
2d Quar. Lesson 6, Gen. 41: 25-40. May 11, 1913.

JOSEPH MADE RULER OF EGYPT —THE STORY.

From the prison-cell to throne room is a startling, abrupt transition. But really Joseph had paved every step of the way, and it had taken him thirteen years to do it. He had gotten the honey out of the eater by submitting to chastening providences. He worked out his own salvation with fear and trembling. At the same time God was working through those beneficent purposes which have always been his pleasure. He intended to bless Joseph and make him a blessing. And Joseph, by his patience, industry, and piety, put himself in the way of getting and being a blessing. Joseph's experiences were trying in the extreme: To be torn away from home and kindred; just when he thought himself a prince, to find himself a slave; after ten years of faithful service, to suddenly and most unjustly lose the confidence of his master; to stand charged with an odious crime, with no chance of proving innocence. It looked to Joseph as if he had traveled the wide circle of sorrow to find himself in the pit once more from which there was the least possible likelihood of his ever being liberated. "Leave all hope behind, who enter here," might well be inscribed on a demijohn dungeon of Egypt. David says they hurt Joseph's feet with fetters, and laid him in iron. And Stephen joins Amos in speaking pathetically of the "afflictions of Joseph." How the tempter must have gibed him! "A pretty fulfilment, this, of all his brilliant dreams!" It was enough to make heart and flesh fail. The average man would have given up to inanity—would have become a spiritless drudge. But Joseph was quite more than an average man. His fortitude and faith shine brightly against the dark background of Egyptian slavery and imprisonment. The young Hebrew made the very best of his circumstances. He acquired the language, observed the manners and customs, detected the defects in public administration, as no native would have been apt to have done. He managed the considerable estates of Potiphar with such fidelity as to prepare him to administer well the vast empire of Pharaoh. And when his environment narrowed down to prison walls, he availed himself of his enforced seclusion to reflect upon what he had observed. He kept himself unpolluted by the vices incident to prison life. Like a swan, he sailed down the corridors reeking with moral filth, and kept himself unsullied. Wherefore God highly exalted him and gave him a name above every mortal name of his age. We say God did it; and we have just said Joseph did it. Paradoxical, but true! There is no clearer example of the co-operation of the Divine and human. Joseph worked and God worked. The result was, the prisoner was metamorphosed into the prince.

THE FUTURE OF FARMING.

It is not for nothing that more boys every year go to school to learn to be farmers, says the Pittsburgh Press, even city-bred boys. Germany, to use one illustration, with an area not as large as Texas, and with land naturally no better, to say nothing of the much longer time it has been under cultivation, supports two-thirds as many people as there are in the whole United States.

Germany does this because it has to. That is the reason we shall do likewise. Necessity is the prolific mother of efficiency. Before another generation has passed the great sums of money now tied up in privately owned street and steam railways, lighting and power plants, telegraphs and telephones and other public utilities in which the returns have been attractive during our careless years will be seeking new investment. Because more and more the people at large will be taking these enterprises over. And then where will it go? Where can it go save into farming—into the development of the one kind of natural resources which is well-nigh universal, which yields inexhaustible returns and which we cannot get along without.

This is going to mean, of course, a great call for skilled workers—for men to make themselves to farming what our captains and corporals of industry, in the generation past, have been to manufacturing, railroading, commerce; only, we hope, newer minded, fairer.

Already the demand for competent farm managers and specialists exceeds the supply. The bright lad who qualifies for such work even now can command in his first years after quitting school better pay than comes to the newly fledged lawyer or doctor or engineer. Moreover, his work is on the level, in the open, healthful, wholesome and productive. He doesn't live upon the weakness or follies or misfortunes of others. He makes his own way. He leaves society better each night for his day's work. It is an inspiring outlook, a real beckoning to the best that is in human nature.

The Biggest Thing in the Clock Business

Big Ben is the biggest thing today in the alarm clock business.

He is only two years and a half old, but he's already getting more work from the States than any clock alive.

In two years and a half time, 18,000 jewelers—70% of the total number of United States watchmakers — have already adopted him. Two million and a half families leave it to him to call them up in the morning. Two million and a half families use him all day long to tell the right time by.

He is really two good clocks in one—a crackerjack of a timekeeper and a crackerjack of an alarm.

Big Ben stands seven inches tall. He is triple nickel-plated and wears an inner vest of steel that insures him for life. His big, bold figures and hands are easy to read in the dim morning light. His large, comfortable keys almost wind themselves. He rings *five minutes steadily or ten intermittently.* If he is oiled every other year, there is no telling how long he will last.

He's sold by 18,000 watchmakers. His price is $2.50 anywhere in the States, $3.00 anywhere in Canada. If you can't find him at your jeweler's, a money order mailed to *Westclox, La Salle, Illinois,* will send him anywhere you say, express charges prepaid.

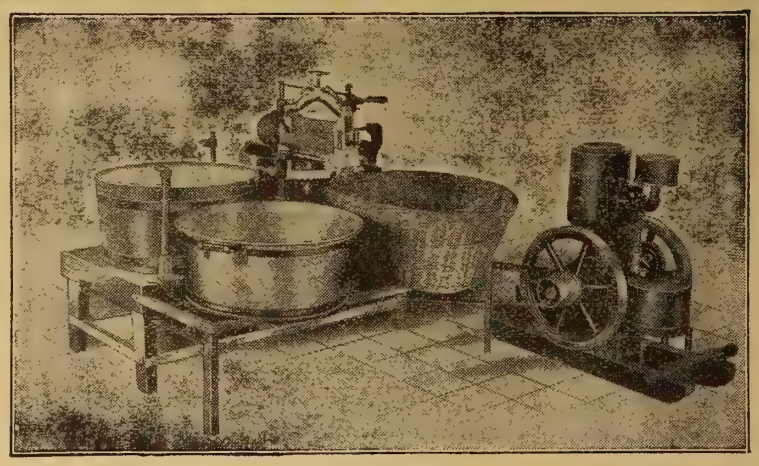
Jenkins Music House, 9 Jenkins Block, Kansas City, Mo.



Save The Woman

Save Her Time—Save Her Work

What would you think of a farmer who gave a man a sharp stick to plant corn with instead of a corn planter?

There's just as much sense in sending a man out to plant corn with a sharp stick as in asking a woman to wash clothes on a washboard. Both are ancient relics. Today there is a *better*, *easier* and *quicker* way to wash clothes, and that way is with

The ONE MINUTE Bench Washer

The Hand Power "One Minute"

Guaranteed to wash clothes clean *quicker* and to run *easier than any washing machine made.*

It runs so light and easy that a four year old girl can make play work with it.

Has *high speed* fly wheel and *pressed steel noiseless gears.* All friction parts work on ball bearings.

Compound lever permits using hand or foot lever or both at the same time, and drives the machine on *50% less power than any hand power washer ever heard of.*

All parts *guaranteed for life.*

Ask your dealer to demonstrate it for you.

Here's an outfit that will save the *hardest part* of washday work.

Instead of having to pull and haul or lift heavy rinse tubs full of water, all the work can be done in one place by simply swinging the reversible wringer around to any one of *four positions.*

The washer has the famous "ONE MINUTE" construction. Washes clothes *absolutely clean*, does not injure the finest fabric.

Has noiseless gearing.

The bench is mounted on a steel frame, with a post in the center for the wringer. Has steel frame folding rack for the rinse tub and basket.

The washer and wringer can be operated at the same time, or separately. The transmission is mounted on heavy angle iron.

Entire outfit includes the Bench, washer, wringer, rinse tub, rack and all the transmission, just as shown above.

The *washer tub*, *rinse tub* and the *bench platform* are made of cypress, the wood that never rots. All fully guaranteed against defects for its entire lifetime.

Any engine can drive it, we furnish the one illustrated here when desired.

Look up the dealer in your town who sells the "One Minute" washer. He is a good man to know, and will be glad to show you this outfit.

ONE MINUTE MFG. CO.
Newton, Iowa

We have the largest washing machine factory in the world

Buy Clothcraft with a Guarantee

LOOK for something more than fit. Whatever you pay, you have a right to know how your clothes are made and what's in them. The Clothcraft guarantee, backed by maker and dealer, tells you.

CLOTHCRAFT CLOTHES

Guaranteed All Wool at $10 to $25

Every Clothcraft suit carries the written assurance of cloth that is absolutely all-wool and fast color; of first-class trimmings, scientific tailoring, permanent shape and satisfactory service. The guarantee in the inside coat pocket covers these points.

Clothcraft is made in many fabrics and styles, at $10.00 to $25.00. The fine workmanship is the result of 67 years of experience in making good Ready-for-Service Clothes.

Go to the Clothcraft store. Ask especially for 5130, the Clothcraft Blue Serge Special at $15.00. Look for the Clothcraft label and the guarantee.

If you can't locate the Clothcraft store, write us. We will send you a card of introduction to the nearest dealer, a Clothcraft Style Book for Spring and a sample of 5130 Serge.

OUR FASHION•DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

4911 Ladies' Apron.—An apron that completely covers the dress is just the thing for kitchen wear. It fastens with a single button at the back. Linen or gingham can be used to make this apron.

The pattern 4911 is cut in sizes 32, 36, 40 and 44 inches bust measure. Medium size requires 5 yards of 36-inch material. Price of pattern ten cents.

4888 Children's Underwear.—Waist, drawers and petticoat are provided in this pattern. The waist has the usual seams and fastens in the back; it also has a stay for the buttons. The drawers open at the sides, the petticoat in the center of the back. Muslin or longcloth can be used for drawers and petticoat and muslin or jean for the waist.

The pattern 4888 is cut in sizes 2, 4, 6, 8 and 10 years. Age 6 requires for waist, ⅝ yard; drawers, ⅞ yard; petticoat, 1⅛ yards, 36 inches wide. Price of pattern ten cents.

4735 Middy Dress.—There is no style for girls as well liked as the middy or sailor frock. This becoming one is sure to please. The blouse is made to slip on over the head and the kilt skirt is joined to a tight-fitting waist. Serge, linen or gingham can be used to make this dress.

The pattern 4735 is cut in sizes 6, 8, 10, 12 and 14 years. Age 8 requires 3¼ yards of 36-inch material with ⅜ yard of 27-inch contrasting goods. Price of pattern ten cents.

5700 Children's Night Gown.—This night gown is plain and easily constructed and results in a comfortable, nice-looking sleeping garment. Cambric or muslin can be used for developing.

The pattern 5700 is cut in sizes 2 to 12 years. Medium size requires 3⅞ yards of 27-inch material, 2⅛ yards of edging. Price of pattern ten cents.

4593 Children's Rompers.—Every small boy and girl needs a pair of rompers and here is an excellent pattern for making such a garment. This garment is made in one piece and buttons at the back.

The pattern 4593 is cut in sizes 1, 3 and 5 years. Size 3 years requires 1½ yards of 36-inch material with ½ yard of 27-inch contrasting material to trim. Price of pattern ten cents.

193 cattle ..$58,580; average....$303.50

Bryson's Short-horn Sale.

A large crowd attended the Short-horn sale of W. H. Bryson, Lake Fork, Ill., April 29th, bidders and buyers being present from Illinois, Indiana, Iowa and Missouri. The fact that the offering was mainly of the so-called plain-bred families, there being very few Scotch-bred animals in the sale, probably kept away some persons, but those who wanted cattle of the beef type irrespective of whether they possessed fashionable pedigrees or not, had an opportunity to make selections from a good bunch, and the fact that the fifty-nine head sold made the satisfactory average of $153 was sufficient evidence of the strong demand for cattle at this time. With but very few exceptions all the cattle in the sale were bred by Mr. Bryson, and were a credit to him and his methods of producing healthy, prolific Short-horns. He raises his cattle under conditions that tend to future usefulness, and those who bought at this sale can feel sure they will get satisfactory results from what they secured. The top of the sale was $350; paid by J. N. Horn, McLean, Ill., for Golden Edgewood, the four-year-old Scotch-bred herd bull, sold by Mr. Bryson because he has so many of his daughters in the herd. He is a bull of much excellence, a strong breeder, and was secured at a conservative price. The demand for bulls was very strong, sixteen selling for an average of $170. A. G. Danforth & Son, Washington, Ill., got good value in Pride of the Realm, a two-year-old son of Golden Edgewood, at $310. These gentlemen were strong bidders all through the sale, securing eleven head of the best things in the offering. The good Scotch-topped Young Phyllis bull, Captain Edgewood, went to Hugh McCormick, Pawnee, Ill., at $300. Sni-a-Bar Farm, Green Valley, Mo., was a liberal bidder, getting several head. It is a refreshing event to have a bunch of cattle sell on their individual merits, as this lot did, and not be discriminated against owing to pedigrees. It shows a tendency on the part of the public to buy cattle for their real worth. The sale was successfully carried out under the direction of Charles Schmitz, who has much experience along this line, and Mr. Bryson made friends by his exceedingly satisfactory manner of doing things. The selling was done by Col. Carey M. Jones, ably assisted by Col. B. H. Keck, and the following is a report of all sales amounting to $100 or over:

Saving the Corn Crop.

There is no doubt that ground squirrels and gophers do an immense amount of damage to the corn crop during the month of May. It is good farming to undertake to prevent this loss. Prevention of the best sort is to try a package of the preparation advertised as Gopher Death, the announcement of which will be found on page 18 of this paper. This preparation has been used successfully for a good many years and is highly recommended by this paper. It is inexpensive, easily applied and as effective as any poison that can be obtained. It may be secured from druggists at the price named in the advertisement or orders will be filled direct by the Fort Dodge Chemical Company, Dept. W., Fort Dodge, Iowa.

Frank Iams' Wonderful Bargains.

Mr. Frank Iams, St. Paul, Neb., has decided to clean up and he therefore must sell twenty Percheron and Belgian stallions in the next thirty days. Concerning his offering he says: Mr. "Wise Buyer," Iams is "closing out" all his stallions at little at ve cost. Is the "town talk." Iams' special. Reduced prices are greatest bargains ever offered. Don't wait—take first train. Visit "Iams" "horse emporium"—today. He has "reduced prices" from $100 to $500 each on "business" and "show stallions." "To "close out" all his "stallions." They will "positively" be sold at "some price." "Ikey," "come on along" and get a "big slice" of "Iams' melon" at "Knock-out prices" for "top notchers"—you will positively buy of Iams. If you visit him and want big, drafty "prize winners," Iams has all the largest and best "business horses" and all his choice "Paris and Belgian" prize winners are in his barns. "Iams'" "tops" of "his herd" are always in his barns at the "last end" of the season. "Iams" has twenty imported "Paris and European" prize winners. They are Iams' "champion show herd" and the best ten stallions and mares in the United States. "Ikey Buyer," its a "100 to 1" that "1913 crops" will be best in ten years. Don't wait to buy a "top notcher" until next year—buy now—save $1,500 and buy a "Paris winner" that you can't always get a chance to buy—cash or one year's time at 8 per cent, bankable note; two year's time at 6 per cent—land security. His "Peaches and Cream" stallions go at $1,000 and $1,200 (few little higher). "Ikey Boy," see Iams now and buy 'top notchers" at a little above cost, as all of Iams' horses will positively be sold. Be a "wise guy" buyer and save $1,500. Buy a "Paris winner." "It's up to you," "Mr. Stallion Buyer," buy a "through ticket" to "Iams' horse town." Walk right in and say "hello." Iams will meet you with a "$1,000 smile" and treat you like "a prince," and there are "some doin's" there daily. Iams' big "ton," superb, classy imported stallions and Iams' low-cut prices "show and business stallions Paris prize winners" make all buyers "sit up and take notice" and can't be driven away until they own one of Iams' "top notchers" at his "bargain counter" prices. Iams and the "Pink Lady saleslady" will not let any buyer with money or good notes get away. "Ikey, come on along." Buy imported horses today. Don't wait, as all Iams' top notchers must be sold in the next thirty days. They are "big snaps." That is why Iams and the "Pink Lady saleslady" are reducing prices on "show and business" stallions and big mares. He made a "killing" buying these "top notchers" and to close out and have new faces he has determined to sell and give buyers the benefit of his "good buy" in 1912. "Ikey horsemen," Iams' six financial letters of recommendation from six of the best banks in Nebraska (shown in his 1913 catalog) tell you why you should buy imported stallions of Iams. His thirty-one years of successful business—his "one-half million dollars" behind his guarantee—the fact that he is a "live wire" business man and expert horseman—in a "class by himself." He makes all competitors "get hammers" out for Iams, but every "knock" is a "boost" for Iams, as when stallion buyers visit "Iams' horse emporium" they find Iams has the horses as represented and that Iams "makes good" and his "old customers" are his "whole page advertisers." "Ikey," "get busy" quick, buy show horses of Iams at "reduced prices," and "wear diamonds." Iams is sure taking "the curl" out of "high prices" on the best bunch of real "top notchers" ever offered for sale in the United States—all "show horses" and at less price than for ordinary stallions. He is making buyers "go fast" to get his "big bargains" and his buyers will be on "Easy Street" if they buy stallions and mares now of Iams at closing-out prices. Iams is positively "closing out" his horses. A "change of business" forces Iams to sell his stallions at "some prices."

A Growing Nebraska Institution.

We are pleased to present to our readers the acompanying illustration which represents a single day's shipment of eggs for hatching. This great lot of eggs was shipped by the Nebraska Poultry Company, Clay Center,

Neb., and Manager Holcombe, in a recent letter, accords a great share of the orders to his advertisement in this paper. The Nebraska Poultry Company has been rapidly growing in public confidence because of its close attention to the interest of patrons and fair treatment of them.

The Heider Book on Tractor Farming Free

Find out how to solve the hired help problem and cut your farm operating expenses 50%. You can't afford to be without the Heider Tractor, because it will do any kind of work in the field, belt or on the road at the lowest possible cost.

A CHANCE TO BECOME A MEMBER OF A COMPANY MANUFACTURING WELL-KNOWN GOODS MANY YEARS IN MINNESOTA.

THOUGH product is nearly $200,000 yearly, as demand exceeds supply, wanting to increase our capacity, will take in partners to the extent of $15,000 or $20,000. If you want an interest in the coming business, here is your opportunity to buy shares of a capital stock, paying large dividends. Company is perfectly sound. Our references are Dun's and Bradstreet's Agencies. We only want this amount of additional capital. First come, first served. You may take whatever number of shares you desire, a large or small amount, but write quickly, if you want any, addressing our representative who is authorized to receive and forward correspondence to us. **L. K. LEE, Dispatch Bldg., St. Paul, Minn.**

BARGAIN SEED

LEAMING Yellow Corn. Bred up in oil and protein, yields up to 100 bushels of grain and from two to five tons more ensilage per acre than most varieties. To close out we are making a price of $2 per bushel in less than 5-bushel lots. Over 5 bushels $1.75 per bushel. All shelled and graded and guaranteed to test 97 per cent germination. Address
WOODLAWN FARM, STERLING, ILLINOIS

Oct. 16, Harry Dodds, Florence, Neb.
Oct. 23, Ed. Seckington, North English, Iowa.
Feb. 4, W. H. Cooper, Hedrick, Iowa.

FIELD MEN.

M. T. White, western Iowa and Nebraska (north of the Platte river). Address 4015 Izard St., Omaha, Neb.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

A. T. Cole, Missouri, Kansas and Oklahoma. Address 3900 Holmes St., Kansas City, Mo.

John C. Halderman, Kansas. Address 4347 Harrison St., Kansas City, Mo.

A. W. Hopkins, Wisconsin. Address 201-202 Washington Block, Madison, Wis.

J. C. Price, southern and western Nebraska. Address 145 So. 28th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

Holstein cows are advertised on page 13 by W. C. Kenyon, Elgin, Ill., He always has on hand 150 to 200 head to select from, all high-grade cows and heifers due to freshen soon, and will price them worth the money.

In an advertisement on page 25 our readers will find the announcement of J. H. Kelly, Altoona, Iowa, offering for sale a number of small ponies. These are sound and rare beauties. Mr. Kelly can provide matured ponies or colts, as the buyer may wish.

The old original big spotted Poland Chinas are bred by H. L. Faulkner, Jamesport, Mo., the only man who never hesitated when the blacks with just six white points were all the rage. Note page 26 for Mr. Faulkner's advertisement and when writing him kindly mention this paper.

G. F. Marshall, Monroe, Iowa, the well-known Poland China breeder, has not as many pigs this spring as usual. He only has about fifty spring pigs, but he is fortunate in having about forty head of fall boars and gilts that look mighty good. These fall pigs are sired by his great herd boar, Giant King.

W. J. Butler, Ottawa, Ill., is making some extra attractive prices on Percheron stallions and mares in order to move them before the close of the season. While Mr. Butler has had an excellent trade this season, he still has a number of good ones in his stables, and if you are in the market for bargains it will be to your interest to get in touch with him. See advertisement on page 28.

Howard Niswander, Kinross, Iowa, who dispersed his herd of Hampshire hogs last October, owing to ill health, has returned to his farm after spending a few months in the West feeling much improved. He has reestablished a herd of Hampshires and has now a much better herd than ever before. He has over 100 spring pigs sired by some of the best boars of the breed. We will have more to say of this herd later on.

Among the enterprising farmers of Iowa who aim to make the most of farming in its different branches, we may name John I. Dripps, Springville, Iowa. Mr. Dripps is a prominent breeder of Poland Chinas, and in that line has attained the highest success. He has also taken great interest in Holstein-Friesian cattle and at a recent public sale in Illinois purchased seven head of extra good cows at from $200 to $220 per head.

In an advertisement on page 25 L. J. Baird, Ames, Iowa, advises our readers that for personal reasons he wishes to sell out his entire stock of Percheron horses. He has stallion colts as well as yearlings, two year olds, three year olds and four year olds, most of which will develop into ton horses. Quick buyers will get some bargains in this lot. He has also seven brood mares from two to six years old. Don't put off, but go at once and get the choice of the lot. Address L. J. Baird, Ames, Iowa.

A. V. Lock, the well-known live stock artist of Remington, Ind., announces that early in June he starts on a trip through the West sketching pure-bred live stock. Mr. Lock's reputation as an artist is of the very best and those who wish to have work done for the fall fairs or for the season's advertising will do well to get into communication with him. See advertisement on page 25 and write to the address named for further particulars.

U. G. Davidson, that vet ran breeder of Duroc Jersey hogs now located at Algona, Iowa, advises us that he has a few fall boars, sired by Golden Model Jr., and out of dams by Crimson Wonder I Am, that are extra heavy boned and of more than average quality. Two of these are out of a litter sister to the great son of Crimson Wonder I Am now at the head of the B. C. Marts herd. They are strictly good ones. See advertisement on page 25 and write to U. G. Davidson, Algona, Iowa.

In an advertisement on page 9 T. A. Gough, Bristow, Iowa, informs our readers that he has for sale rough-coated Collie puppies. Mr. Gough's breeding stock came from the best kennels of Iowa and Illinois as well as from imported stock. He has one litter by Imp. Billesley Brother, which has been pronounced the best Collie ever sent to this country. These puppies give satisfaction to the purchasers. They are elegible to record in the A. K. C., and pedigree will be furnished with each animal. Address inquiries to T. A. Gough, Bristow, Iowa.

P. W. Weberg, Denison, Iowa, reports 100 Duroc Jersey spring pigs and all doing well. They are sired by Crimson Wonder 3d, his noted grand champion boar; C. H.'s Special, his 900-pounds boar, and a number by the noted King The Col. He has quite a few pigs by several of other more noted herd boars and he is going to be right for the fall trade if nothing happens. He has a number of litters by Crimson Wonder 3d and C. H.'s Special that the boys are going to want this fall, and those who are going to want a herd boar the coming season should arrange to buy one of these. Mr. Weberg will be glad to hear from Homestead readers at any time or will be glad to show them his herd.

Messenger Offers Hampshire Boars.

Clayton Messenger, Keswick, Iowa, is offering for sale four fall boars and two aged boars. They will be priced worth the money to quick buyers. Mr. Messenger has 250 spring pigs largely sired by his great boar Messenger Boy, but he is not pricing these pigs yet. See page 25 and write Mr. Messenger mentioning The Homestead.

Angus Bulls for Sale.

On page 25 H. R. Davis, Corning, Iowa, advertises Aberdeen Angus bulls for sale. Among the number is a two-year-old sired by the Blackbird bull Blackbird Dan, and several younger bulls sired by the double-bred Blackbird bull, Sir Blackbird. Mr. Davis wants to sell these bulls and he is pricing them right. Write him at once or go and see him and kindly mention The Homestead.

Westrope Offers Short-horn Bulls.

On page 27 J. G. Westrope, Harlan, Iowa, advertises some good young Scotch and Scotch-topped bulls for sale and he has some that will make splendid herd bulls. He has an outstanding good young bull that is right for the man that is wanting something that will make a decidedly good herd bull. It will pay you to go and see this bull if you are on the market for a herd header. Write him right away and kindly mention The Homestead.

American Goods for Sale.

Some enterprising Short-horn breeder who is on the market for a good herd bull should buy American Goods, that great son of Imp. Choice Goods, now offered for sale by W. H. McLaughlin, Shelby, Iowa, on page 27. He is just in his prime and he is pricing him where he is well worth the money to some good breeder who wants to buy a herd bull. He also has ten or twelve young bulls for sale. When writing Mr. McLaughlin kindly mention The Homestead.

Saunders Selling Bulls.

That old reliable breeder, C. A. Saunders, Manilla, Iowa, has a few choice young bulls left and one of the best of these is a Gypsy Maid that we referred to some weeks ago. This bull is good enough to head the best of herds. He has a few others that are also very choice. Trade in bulls with him has been very good of late and if you should want one of these you will have to get busy and go and see him at once. When writing him kindly mention The Homestead. See page 27.

W. H. Cooper's Poland Chinas.

W. H. Cooper, Hedrick, Iowa, has just closed one of the most successful seasons he has ever had as a live stock auctioneer as well as a breeder of big-type Poland Chinas. Mr. Cooper has been one of the most successful breeders of big-type Poland Chinas in the corn belt and there are two things that have been largely responsible for this success. One is the fact that he has gotten together a lot of sows that for size, bone, quality and smoothness, can hardly be surpassed, and another thing, he has always made his word good in every case. In his long experience he has never had one dissatisfied customer who had a right to feel dissatisfied but what Mr. Cooper very willingly made things right. A representative of this paper recently visited Mr. Cooper's farm and found everything in a very prosperous condition. The pig crop this spring is in fine condition and several have already been sold for June delivery. The spring pigs are largely sired by Big Expansion and Big Bone 2d, two of the good boars of the breed. See Mr. Cooper's advertisement on page 26 and write him, mentioning The Homestead.

Duroc Jersey Fall Boars.

On page 25 Fred Swan, Missouri Valley, Iowa, advertises fourteen good fall boars for sale. These are sired by Golden Gano, a son of that noted show boar Golden Model 17th and out of a Gano-bred dam. These boars are out of some of the best sows he has on the farm. He is pricing these at $25 to $40. He has 300 head of spring pigs sired by ten or twelve of the leading boars of the breed and he is offering these for sale singly, in pairs or trios, and will make the price right. Send him your order at once for one of these boars and kindly mention The Homestead.

R. G. McDuff's Duroes.

R. G. McDuff, Monroe, Iowa, has a fine lot of spring pigs about half of which are sired by I Am A Crimson Wonder 2d, the great boar now at the head of the Swan & Ellis herd. These are a promising lot of pigs. Mr. McDuff has a litter of nine by King The Col. and a litter of eight by Col. Gano that are extra good. He has about fifty sired by Col.'s Chief, a grandson of the Illinois grand champion, Chief's Col. Mr. McDuff will dispose of his boars privately, but will hold a bred sow sale January 23d when he will sell an exceptionally good lot of sows of the best breeding obtainable.

William Reed's Fall Boars.

William Reed, Rose Hill, Iowa, one of the best breeders of Duroc Jerseys in the state, is offering a few extra good fall boars sired by Chief Select and Reed's Top Col. Mr. Reed has the best lot of fall boars the writer has seen on one farm in many days. Among them are boars that if properly fitted would be winners at any state fair. The breeding is as good as the individuality and any breeder in need of a high-class herd boar should write Mr. Reed at once, or better, visit his farm and see for yourself. See page 27 and when writing kindly mention The Homestead.

Chester White Fall Boars.

G. O. Satre, Jewell, Iowa, a young Chester White breeder who has made a good start towards establishing one of the strong herds of this strain, advertises some fall boars on page 25 of this issue. These pigs are out of the best sows in the herd as Mr. Satre uses only this sort to raise fall pigs. This fact with the good winter also considered means a thrifty lot of pigs grown out well and healthy in every way. He also offers a two-year-old boar which is sold through no fault, there being much of his stock kept in the herd for breeding purposes. Write Mr. Satre now for his choice pigs. Address G. O. Satre, Jewell, Iowa.

Fred Swan's Durocs.

Three hundred spring pigs is some number. That is what Fred Swan, Missouri Valley, Iowa, now has on his farm and it looks as though he is going to be right for the fall trade. He recently bought old Educator, one of the best living sons of old Ohio Chief, and he is breeding a lot of sows to him for fall litters. He has a splendid litter out of O. R.'s fine sow, the one that topped the Seddons sale last winter and these pigs are sired by Col. Gano, and they certainly are good. Another good litter out of an Advance sow is sired by Proud Iowa Chief, and he has others by Golden Gano, Crimson Wonder 3d, C. H.'s Special and High Ridge Muncie. Just now he is offering fifteen good fall boars for sale and these are sired by Golden Gano. If any of our readers want one of these they should write Mr. Swan at once.

Pitz & Adams' Poland Chinas.

One of the newer herds of Poland Chinas of Nebraska that is entitled to consideration is the herd owned by Pitz & Adams, Plattsmouth, Neb. These gentlemen have been busy the past year or two assembling a head of sows that would make them a foundation fully as good as the best. They have done much toward this end, and today their herd of sows will compare very favorably with the best herds of the country. They have a nice bunch of spring pigs, and by several sires. Sows were purchased last winter from the herds of Mr. Lonergan and also some very select purchases made from the Thos. F. Walker & Son herd. These gentlemen are now booking orders for spring boars, and we bespeak for them the consideration of Homestead readers. When writing kindly mention this paper. See advertisement on page 25.

August Gorder's Poland Chinas.

A good many breeders of Poland Chinas will remember August Gorder, Plattsmouth, Neb., as the buyer of the sensational show pig at the Nebraska State Fair, Futurity Jack. This boar was an easy winner of first in the Poland China futurity at the Nebraska State Fair and was an easy winner of first place in the six-months class. He was the top of the Lonergan sale last October and was at that time purchased by Mr. Gorder and Mr. Snyder. The boar was lame sale day, in fact had been lame ever since the fair and up to that time, but a short time after got nearly well of this trouble, and was being used for early litters when one morning he was found dead in his pen. The result is that there are only a few of his get in existence, and while their numbers are few on this farm, yet some as good pigs as the writer has seen all season so far, are here. Mr. Gorder has another boar, one of Mr. Pritchard's breeding that he is using, and he is quite a good boar, too. A nice lot of fall gilts, really extra nice are on the farm and a few fall boars. These latter are now for sale, in fact the gilts are for sale and will be bred for those that order. These fall boars are by Teddy by Big Mischief, and we want to say that one of them is a real herd-heading proposition. The fall gilts are also sired by Teddy, and they are the real big, smooth ones. Parties interested in this stock will do well to write Mr. Gorder at once and when doing so kindly mention The Homestead.

A Late Cook Book.

The ladies of the families into which this paper goes will be pleased to learn of a new and novel cook book which has recently been issued. This is the Cresota cook book, full of recipes of the best sorts and including the making of practically every necessity or dainty which the hosewife is called upon to provide. This book is just a little better than the ordinary cook books because it presents with its recipe instructions for mixing the ingredients, each paragraph and plainly numbered in its proper order. This arrangement makes it impossible to go wrong in the preparation of the recipes. For a limited time readers of this paper may procure copies of this book free by writing to the Northwestern Milling Co., Minneapolis, Minn., and mentioning The Homestead.

Wilson's Yearling Duroc Boars.

I. J. Wilson, West Branch, Iowa, is advertising six Duroc Jersey boars for sale on page 27. One of these is sired by Crimson Wonder I Am and out of a Proud Col. sow. Mr. Wilson has about forty pigs sired by this boar and he looks like he would be an excellent sire. The other five boars are sired by Wilson's Defender, a litter mate to Disturber now at the head of H. E. Browning's herd and a boar that Mr. Browning considers the greatest boar he ever owned. Of these five boars sired by Wilson's Defender, three of them are good ones. One of these was the first-prize pig at the West Liberty and Tipton fairs last fall and he would not make a bad show this year. These boars are just in nice breeding condition and any breeder or farmer needing a big, strong, heavy-boned boar ready for hard service should write Mr. Wilson, or better, visit him. The prices are very reasonable. See page 27 and when writing kindly mention The Homestead.

Wiles' Red Polls.

The writer recently spent a bit of time at the beautiful stock farm owned by Luke L. Wiles, Plattsmouth, Neb., and we wish to say that we saw a grand lot of Red Polls, as one usually does at this farm. Mr. Wiles is not a novice in the breeding of Red Polled cattle, and has owned some of the greatest bulls of Nebraska. One of his former herd bulls, Closson, was not only a great individual, but as a sire was one of the very best. The past two years the herd has been headed by the grand young bull, Happy Jack 2d by the world renowned Happy Jack. Happy Jack 2d is today one of the best individuals within the state, and if shown would make mighty interesting competition for all of them. The cow herd is one that has been carefully selected for many years and combines in rare form some of the best blood of the breed. Those of our readers interested in good Red Polled cattle will find it to their interest to write Mr. Wiles at once. Address Luke L. Wiles, Plattsmouth, Neb., and when writing kindly mention The Homestead.

Democratic Prices for Thirty Days.

Henry Beck, Litchfield, Neb., the veteran horseman of that place and one of the leading democrats of the state says that he believes in practicing what he preaches and is naming real democratic prices on some choice Percheron and Shire stallions, also a choice lot of big-boned, long-eared jacks and jennets. Mr. Beck wants to sell this stuff, and if you are in shape to give him a good note or cash, go and see him and you can do business. The writer is familiar with the stock offered and we wish to say that they are the right sort. They are pasture raised, of good breeding and have the best constitutions of any horses grown in America. The climatic conditions in Nebraska especially the central and western part, are simply ideal for producing the highest class horses possible. This is worth something to the intending buyer, and will be appreciated by the man that has paid out a lot of money for horses that were of mighty short life, or failed to breed at all. Get one of these rugged fellows, or one of these big jacks and he will not owe you a dime next fall. When you write mention The Homestead. See page 25.

The J. C. Meese Polands.

One of the best showmen and all around stockmen that Nebraska has among the many good ones is J. C. Messe, Ord, Neb. Mr. Meese has probably shown as many or more first-prize and champion hogs for the number taken to the fair grounds as any showman in the state. He brought out the great Grand Look, the champion Orphan Boy, the champion King Mastiff, the great boar Young Mastiff and M. & M.'s Mastiff, as well as a host of winning sows and gilts. The six-months gilts from this herd were the sensation of the Nebraska State Fair last season. They were sired by the great breeding boar Big Gun. Big Gun was a great boar in his form last year, and at some of the fairs was first, but he met with a misfortune that came near keeping him away from the fairs altogether and hindering him greatly as to condition. About a month before the fair he got in a fight with a stag, and came near meeting his death. The stag was lean and active and Big Gun was getting quite a bit of weight and the stag nearly ended his days. The get of Big Gun won everywhere along the line last season, and they will have to be reckoned with again this year if all goes well. The great old breeding sow, Sweet Look, is ten years old and has a litter of six or eight pigs again this year. She is not suckling so good this season, but she sure has furnished a lot of grand breeding stock for the Poland China breed, probably better than any single sow the past ten years in Nebraska. One or two choice fall boars and one or two

a little older could be spared and at prices that are really bargains for the stock offered. Should you write mention The Homestead.

The Improved Metal Wheel.

The Havana Metal Wheel Company is prepared to furnish steel wheels for any wagon or cart. Wheels are made to fit the axle where the buyer gives his order according to the rules of the manufacturer's order sheet. By substituting a set of these low wheels it is possible to make a low work wagon of any ordinary gear. These wheels are fitted with wide, flat or grooved tires. They not only reduce the amount of lifting required in loading and unloading, but they also diminish the load for the team. In addition to steel wheels the firm also supplies wood wheels and complete farm trucks. For additional particulars write to Havana Metal Wheel Company, Box 47, Havana, Ill. See the advertisement on page 12.

Koenig Offers Herd Boars.

For the reason that he is a little long on herd boars, H. H. Koenig, De Witt, Neb., will sell one of his two well-known boars. One of these boars is Red Model by Golden Model and out of the great breeding sow Miss Hope. This boar is a full brother to Model Queen, the highest priced sow of the breed in the West for the last several years. The other boar is Crimson King by the great breeding boar I Am A Crimson Wonder 2d, and he is out of the great show and breeding sow, Currant Blossom. Crimson King was the top boar pig in the dispersion sale of J. S. Beem. Either of these boars are the real stuff as herd headers and choice will be sold at once. Mention this paper and write immediately if interested.

Lionberger Offers More Choice Boars.

C. Lionberger, Humboldt, Neb., has sold the past week two extra choice boars to head pure-bred herds of Poland Chinas and still has on hand some more of the same kind. A few have been sold to farmers' herds and those looking for big, strong boars and at farmers' prices will find them here. Right now the best thing on the place is a son of Equal's Stamp by Long King's Equal and out of the great breeding sow Promotress. This pig is a herd header in every way, big and stretchy, and lots of bone. This pig goes with the first check of $50 and he is well worth it. Plenty big for a good number of sows right away, and of the sort of breeding that will improve most herds and injure none. Some other choice boars as low as $25. Send your orders at once and mention this paper when you write. Perry Reed, Henderson, Neb., and Herman Schmale, De Witt, Neb., were the breeders that purchased the past week.

Fred Swan's Durocs.

One of the newer breeders that is coming to the front is Fred Swan, Missouri Valley, Iowa, and he has 300 head of spring pigs now on his place. These are sired by Col. Gano, Golden Gano, Proud Iowa Chief, Crimson Wonder 3d, High Ridge Muncie, C. H.'s Spinal and a number of other noted herd boars. Mr. Swan now owns old Educator, one of the best living sons of Ohio Chief. This boar was used in Harry Browning's herd and some the best sows he ever sold were sired by this boar. His get have always been in demand, and Mr. Swan now has quite a number of sows bred to him for fall litter. His Golden Gano boar is also an excellent breeder and some of the best things he now has on the place are sired by him. One of the greatest litters he has on the farm is by old Col. Gano and out of O. R.'s fine sow, that was the top of the Sedden's sale last winter. She had nine and saved eight—four boars and four sows and they are very excellent. He will surely have some herd boars in this bunch. He has a good litter by Proud Iowa Chief and out of Pansy Advance 3d as well as other splendid litters too numerous to mention. Mr. Swan has so many spring pigs that he will sell a few privately and at prices that will move them. He also offers fourteen good fall boars and he wants to sell these right away. Write him about these at once and mention The Homestead.

An Extra Duroc Jersey Boar.

Probably the best Duroc Jersey herd boar proposition offered the public for some time is being offered by D. S. Cochran, Lincoln, Neb. This boar is a two year past, and one of the grandest breeding boars within the state. He comes of a parentage that has no superiors and from a litter of extra choice stuff. He was sired by I Am A Crimson Wonder 2d, the boar now owned by Swan & Ellis, Iowa, and was out of the great breeding and show sow, Royal Blossom 6th. I Am A Crimson Wonder 2d was sired by that sensational boar I Am A Crimson Wonder by C. W. Again. He was out of the great sow Hazel Kirk by Proud Advance. Royal Blossom 6th is a little mate to the well-known breeding boar, Royal Critic used for some time in the Putman herd. She was sired by Ruby Critic, without question one of the very best sons of Glendale Critic. The dam of Royal Blossom 6th was Royal Blossom 5th, probably as good a sow as the breed ever produced, and undoubtedly one of the greatest as a show sow. Royal Blossom 5th was sired by American Royal. The Cochran boar is a litter mate to Crimson Critic owned by Briggs Bros., Seward, Neb., first prize in class Nebraska State Fair, 1911. Another litter mate was a second or third prize boar in Minnesota the next season, and this boar was a champion himself being defeated for grand champion honors by Critic B., the grand champion Nebraska State Fair, 1912. A better bred boar is not to be had, and a better breeder will be mighty hard to find. It will probably be out of the question to get this boar in shape to win this season, for he is too thin now, but if he could be gotten in shape he would get in the money all right. This boar may be had soon, and those interested should address D. S. Cochran, Lincoln, Neb.

Bellows Bros.' Short-horn Sale.

The sale of Short-horn cattle which Bellows Bros., Maryville, Mo., will hold on June 10th, will be a sale that should interest every lover of good cattle. There never has been a time that Bellows Bros. did not offer superior cattle and for this event they have listed more high-class cattle than have ever gone through one of their sales and a greater lot have not recently been exposed at public treaty. The offering of bulls is by far the strongest these gentlemen have ever been able to make. Every one of the dozen bulls listed is superbly bred and all are such good individuals that breeders will have an exceptional opportunity for selecting such as in their opinion will best suit them for use in their herds. The offering of females will not disappoint the most critical as the herds have been drawn on for some of their very best cows and heifers. The get of the great herd bulls that are in service and have done service in the Bellows herds are well represented as great bulls that head other herds. Nineteen cows have calves at foot by Bellows' herd bulls and in most cases are well along in calf again to their leading herd bulls. Diamond Goods, winner of many championships, is the sire of a great string of bulls that will be sold. His character, conformation, feeding quality is transmitted through these to such an extent that they should be appreciated. Females with calves at foot and bred to him should be equally appreciated. Several of the very choiceest specimens of the breed are listed, the calves at foot with these show that in mating Diamond Goods with such cows has resulted in an improvement such as every progressive breeder desires. Good Choice the sire of Diamond Goods is also well represented as is Sultan Supreme the bull selected to succeed Good Choice. Catalogs with photograph illustrations of many of the cattle listed, the herd bulls and other scenes of cattle in the herds will be mailed to all who request same mentioning this paper.

W. J. Hather's Herds and Flocks.

A stockman that is always on the job is W. J. Hather, Ord, Neb. He has been engaged in the pure-bred stock business for near a quarter of a century, and he has made money. That is right, he has made money, but he has also made the stock business of Nebraska better by his having taken a firm hold of the business and put forth his energy to keep the wheels going. Probably the greatest Clydesdale stallion anywhere in the West is on this farm. He has been a persistent winner at the International, and champion at the Nebraska State Fair. He is the great colt, Dictator. He was imported and shown by McLay Bros. and later purchased by Mr. Hather. A few more mares could be bred to this young horse, and readers of The Homestead that appreciate the opportunity offered hereby should not allow it to pass. The service fee is moderate and mares will be well cared for. The Short-horn herd is for sale in its entirety, or in part. It is headed by the great son of Avondale, called Havendale. He is a beautiful rich roan bull of much substance and with a grand lot of quality and is siring some extra choice stuff. The best aged show boar proposition that the writer has seen to date is the Poland China boar, Hadley Over, sired by Hather's Hadley 2d. Hadley Over was the reserve champion at the International last winter and was the second-prize junior yearling boar at the Nebraska State fair last fall. He was defeated for first place by a boar shown by Mr. Stout, Beatrice, Neb., and this boar owned by Mr. Stout was the best fitted hog on the fair ground, in fact, he was as well fitted as any hog the writer has ever seen. The writer has served his apprenticeship in this hog fitting himself and has been able to get the blue ribbons sometimes, but the boar that defeated Hadley Over was just the best in that line that has ever come to our attention. If nothing befalls him, Hadley Over will be at the fair, and will be one of the hard ones to head off. A few fall boars are for sale from the Hather herd, also a few sows to farrow the last of this month. When writing about any of this stock kindly mention The Homestead.

The Holbrook Angus Sale.

Holbrook, Iowa, although only a small inland village, is better known to breeders of Aberdeen Angus cattle than a great many cities containing thousands of people. This is due largely to the efforts of a few men in that vicinity who have given the best part of their life to the upbuilding of the Aberdeen Angus breed. Many of the best specimens of this breed have come from this vicinity. Many grand champion bulls, cows and steers have been bred here. P. J. Donohoe, Holbrook, and William Cash, Williamsburg, Iowa, are two men who have played an important part in placing Holbrook on the map when it comes to good Angus cattle. These two gentlemen will hold a sale of sixty head of bulls and females at the Holbrook sale pavilion on May 27th. Some of the best animals in each herd have been listed for this occasion as both men are desirous of offering a class of cattle that will appeal to the very best judges and breeders in the country. A representative of this paper has looked over the cattle and can vouch for the high quality of the offering. Any breeder wanting the best to be had will not be disappointed in the individuals to be sold in this sale. There will be about fifty females and ten bulls. The breeding of the cattle is as good as the herd books contain. Blackbirds, Trojan Ericas, Queen Mothers and Prides, four of the most popular families, make up the offering. Most of the best bulls known to the breed are contained in the pedigree of the sale cattle. Such bulls as Black Woodlawn, unequaled as a show bull and sire of show cattle; Prince Ito; Black King of Woodlawn; Prileno; Egan Star; Black King of Homedale 2d; Irwin C., are the sires of most of the cattle to be sold. We will not call attention to any particular individual to be sold as there are so many good ones that our space would not permit of a description of each one. However, we want to urge every breeder and farmer interested in good beef cattle, but more especially Aberdeen Angus cattle, to write Mr. P. J. Donohoe for a catalog and arrange to attend the sale. See page 26. Mention The Homestead when writing for catalog.

Holstein Bargains at Woodlawn.

The Holstein herd at Woodlawn Farm, Sterling, Ill., now numbers over 250 head, and there is no want that Manager Williams cannot fill in a satisfactory manner. At present he is making some very attractice prices on some bull calves and would be pleased to send his list to any person who will write for the same. The Woodlawn herd is a producing one, the females being noted for their ability to give 8,000 to 12,000 pounds of milk per year, and Manager Williams will quote prices on females that will certainly move them if you are in the market for producing Holsteins. A day can be spent pleasantly and profitably at Woodlawn Farm, and visitors are always welcome. Look up the advertisement on page 13 and write them your wants today.

Local merchants are now complaining because auto-owning farmers go to the larger towns to do their trading when roads permit. It is said that small towns are suffering greatly because of this in many sections of the country. Thus they find still another reason why farmers should be denied the pleasure of the auto.

Ask your neighbor to subscribe for The Homestead.

POLAND CHINA SWINE.

W. H. COOPER, LIVE STOCK AUCTIONEER

WE maintain one of America's greatest herds of strictly big-type Polands with big-type blood lines. We have in connection with it, one of the most complete plants for the business known. Twenty sows in our herd average over 650 pounds each including several yearlings.

50 HEAD OF BRED SOWS AVERAGED $65.00 in our February 4th sale, mostly gilts. We are booking orders now for June delivery, gilts and boars of this spring's farrow, at $20.00 and $25.00 each, out of these sows, which are of the biggest blood lines known, and sired by our big herd boars, including the great Big Expansion, weighing 800 pounds at two year old, and Big Bone 2d, and other boars of like breeding. Can furnish boars and gilts unrelated. Guarantee everything as represented or it may be returned and money refunded. Everything recorded free to purchaser.

W. H. COOPER, HEDRICK, IOWA.

FALL BOARS BY LONG KING'S SUPERIOR

AND Big Bone III. I have 4 fall Poland China boars by Big Bone III out of a Long King sow and a number by **Long King's Superior.** Send me a check for **$25.00** and I will send you a boar worth the money. If upon his arrival you are not satisfied send him back and get your money. Send me your order, mentioning The Homestead.

C. W. PHILLIPS, NEW SHARON, IOWA.

WE ARE NOW BOOKING ORDERS FOR BRED SOWS

WE have a number of extra choice fall gilts, great big ones, that we will breed for fall litters for those that order now. These gilts are by Nebraska Wonder, by A Wonder, and Chief Price Again. Will breed them to Sampson Junior, a selected son of Nebraska Wonder, or to Nebraska Wonder. We price these gilts low for the class of stock, and if you wish some of this sort order at once. Be sure to mention The Homestead when you write. Address

BEALL & JACKSON, ROCA, NEBRASKA.

BIG SAMPSON 62026 FOR SALE

POSITIVELY the greatest value of the year in a Poland China is **Big Sampson 62026.** I have but little further use for him and the low price of $400 will buy him. One of the few really extra big boars of the country. He is two years old and immune. Could use a few sows in part payment. If you really want a big boar and a good one address

H. B. FRANCISCO, HASTINGS, NEBRASKA

BAIRD'S MAMMOTH POLAND CHINAS

THE great sire Columbus, without doubt the greatest big boar in existence, is in service. Sows of mammoth build and of the richest breeding make up the herd. We would like to hear from you if interested o extra good ones. Mention The Homestead and address

R. B. BAIRD, Central City, Neb.

HERD-HEADING POLAND CHINA BOARS.

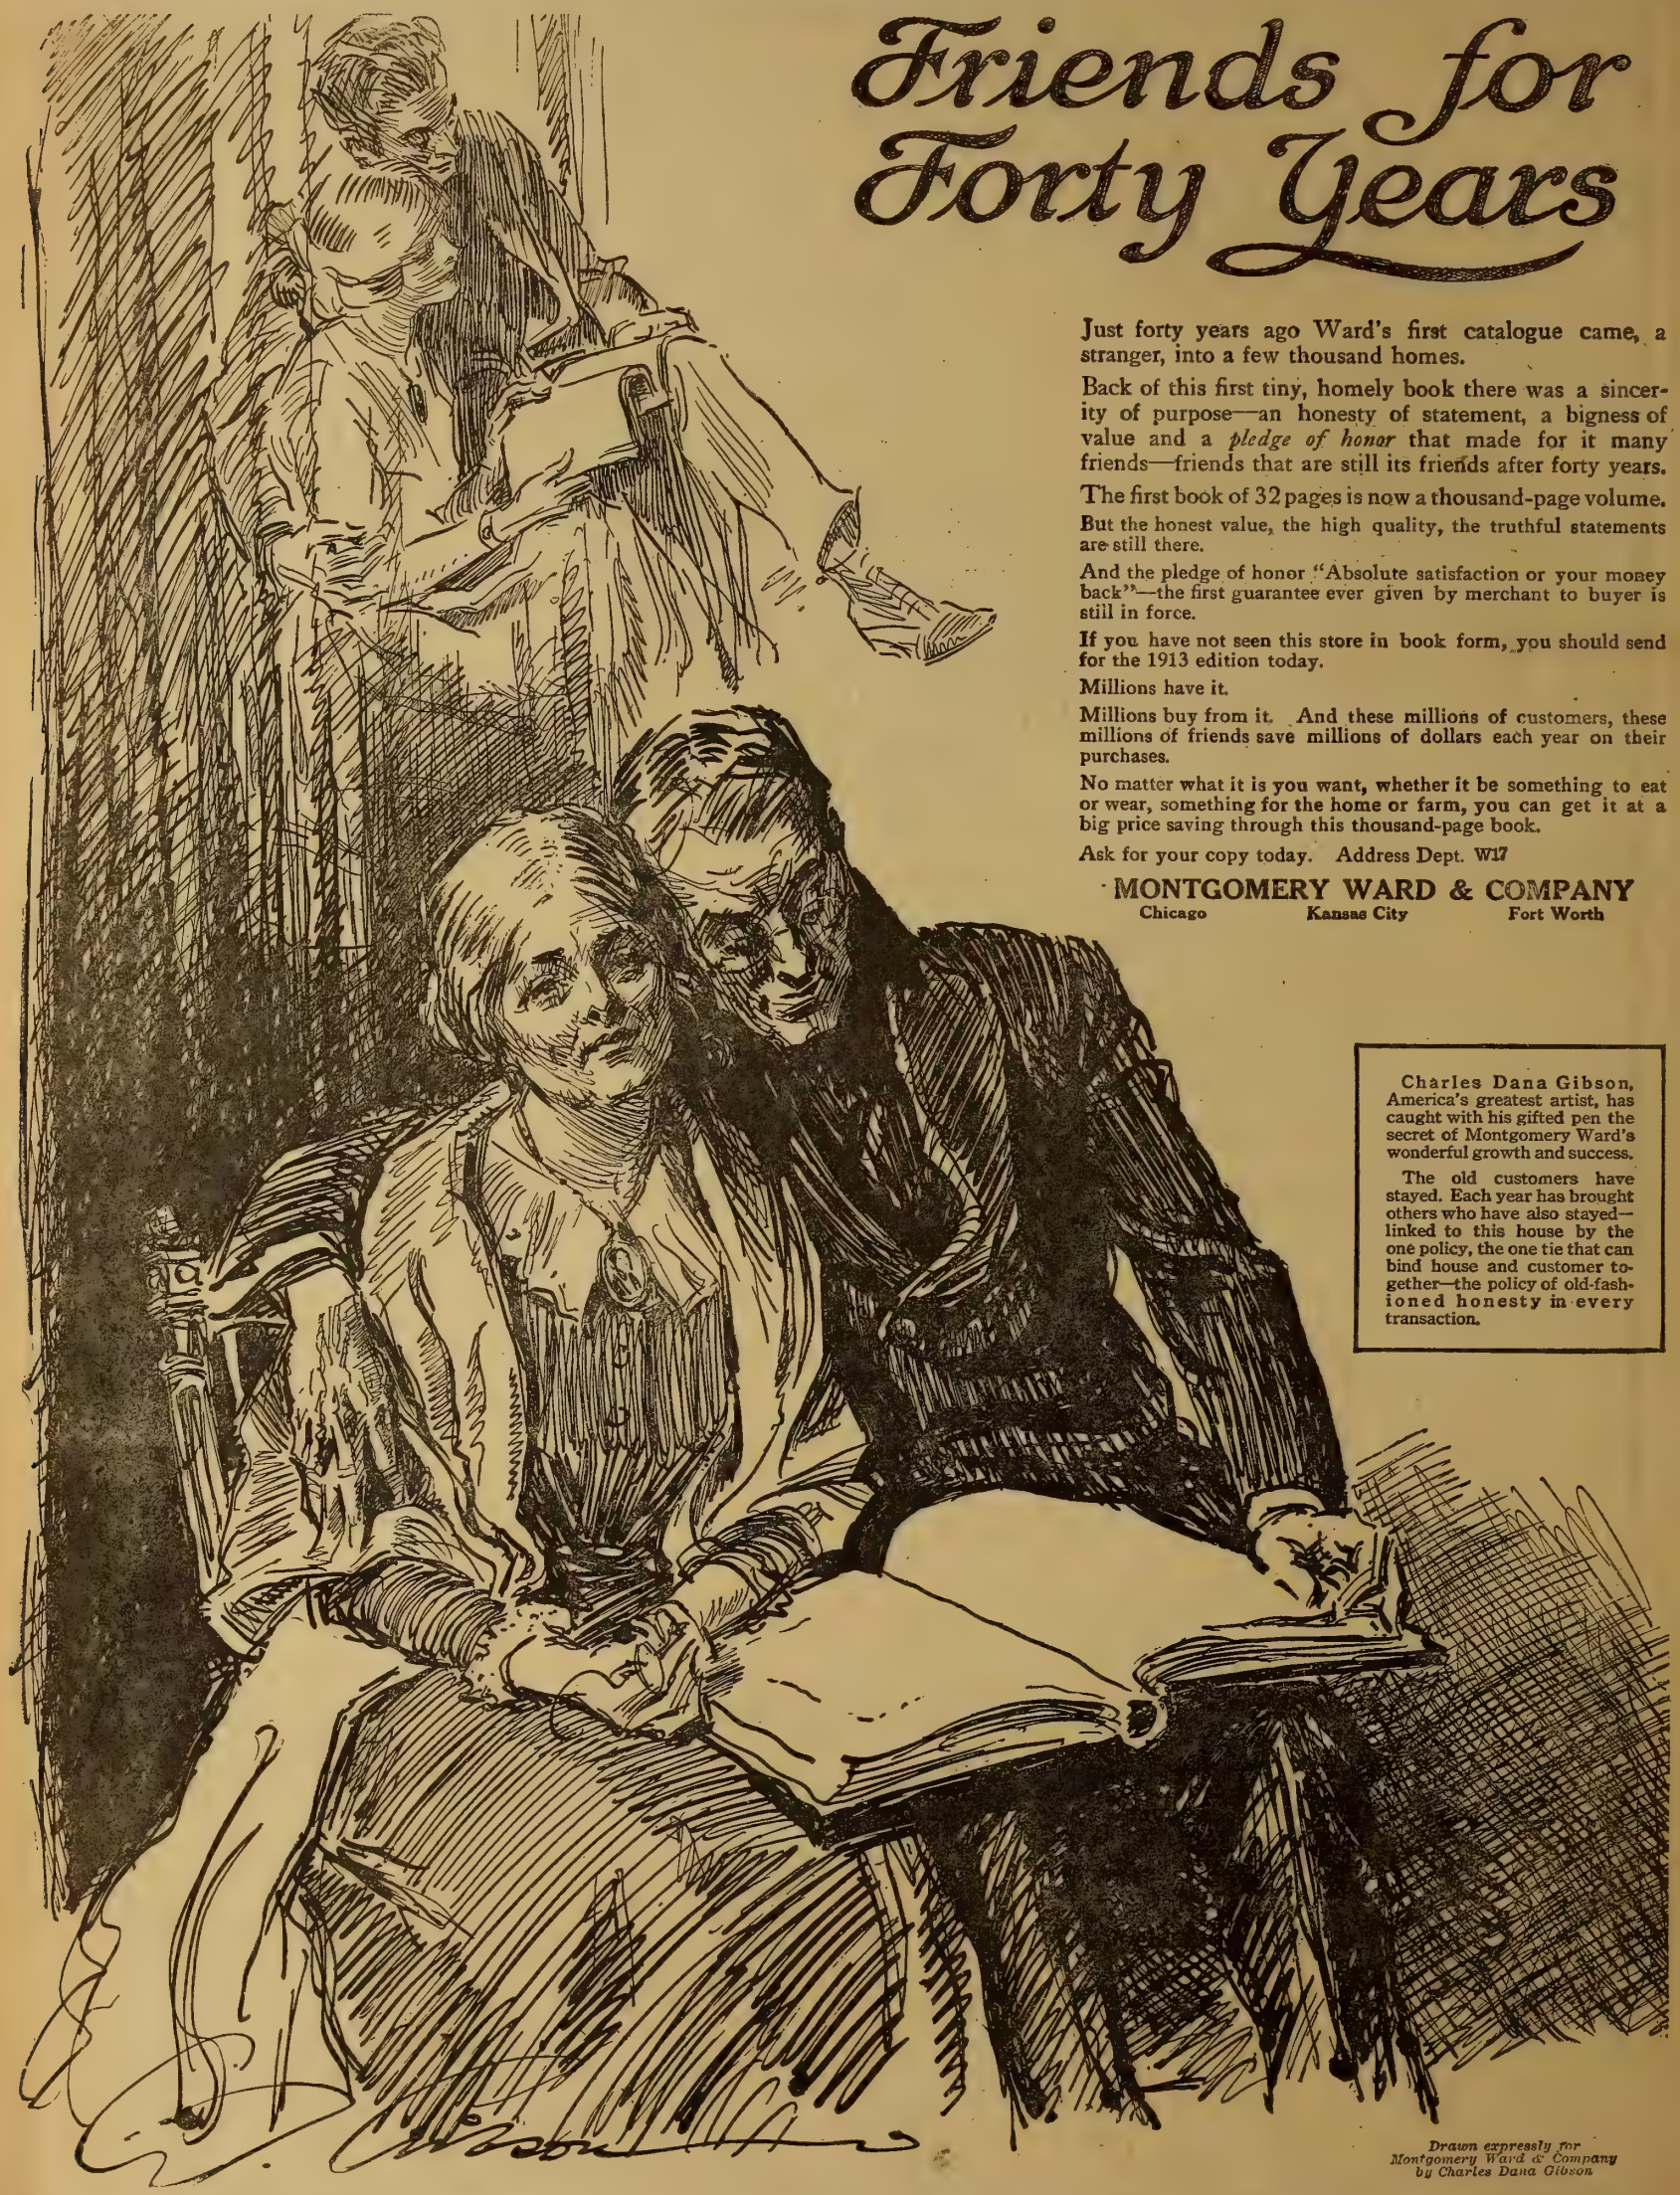
Friends for Forty Years



Just forty years ago Ward's first catalogue came, a stranger, into a few thousand homes.

Back of this first tiny, homely book there was a sincerity of purpose—an honesty of statement, a bigness of value and a *pledge of honor* that made for it many friends—friends that are still its friends after forty years.

The first book of 32 pages is now a thousand-page volume.

But the honest value, the high quality, the truthful statements are still there.

And the pledge of honor "Absolute satisfaction or your money back"—the first guarantee ever given by merchant to buyer is still in force.

If you have not seen this store in book form, you should send for the 1913 edition today.

Millions have it.

Millions buy from it. And these millions of customers, these millions of friends save millions of dollars each year on their purchases.

No matter what it is you want, whether it be something to eat or wear, something for the home or farm, you can get it at a big price saving through this thousand-page book.

Ask for your copy today. Address Dept. W17

MONTGOMERY WARD & COMPANY
Chicago Kansas City Fort Worth

Charles Dana Gibson, America's greatest artist, has caught with his gifted pen the secret of Montgomery Ward's wonderful growth and success.

The old customers have stayed. Each year has brought others who have also stayed—linked to this house by the one policy, the one tie that can bind house and customer together—the policy of old-fashioned honesty in every transaction.

Drawn expressly for Montgomery Ward & Company by Charles Dana Gibson

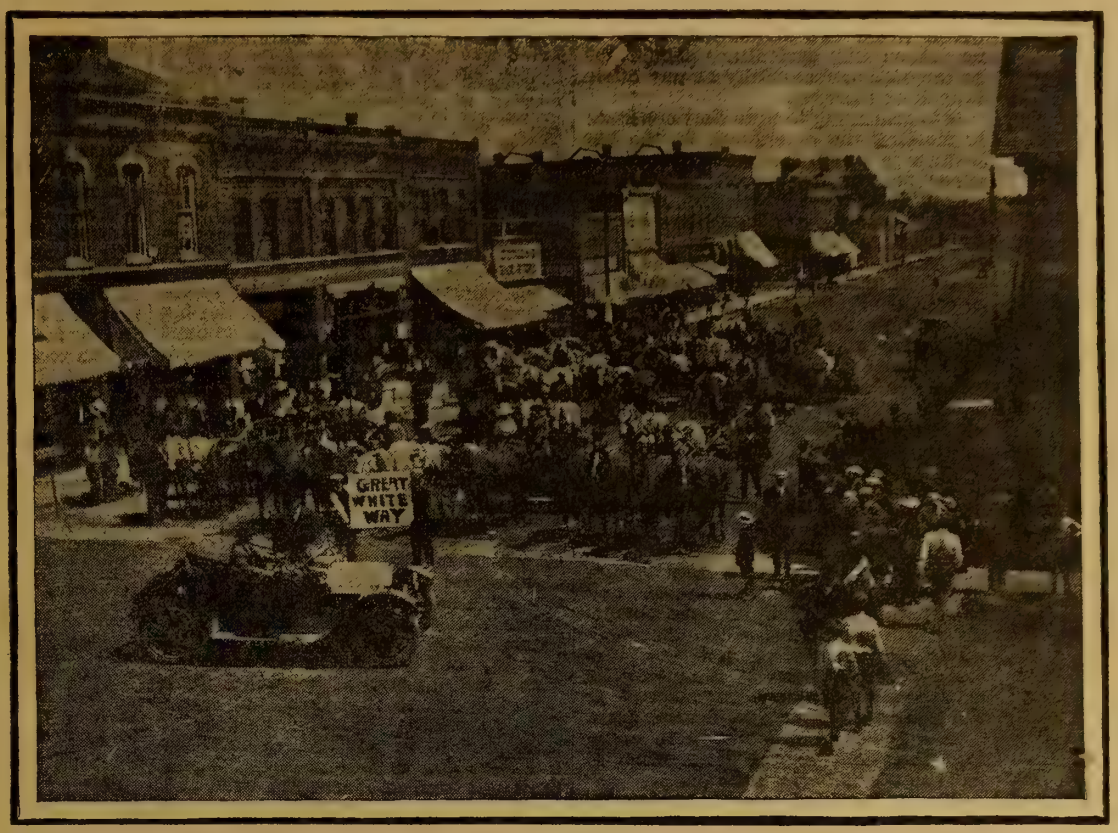
DES MOINES, IOWA, THURSDAY, MAY 15, 1913.

THE SUCCESS OF ROAD DRAG DAY

Merchants Offer Prizes to Every Farmer Driving Into Town on a Drag—Farmers Make Round Trip of Twenty-one Miles, Putting Highways in Best of Condition.

ROAD Drag Day is the latest plan not only for the improvement of the country highways, but also for that harmonious co-operation between farm and town dweller on which the complete success of both depends. As tried out within the past few weeks in a number of grain belt communities the scheme is eminently successful.

The manner in which the plan was tried out in Stuart, Iowa, last week shows its possibilities and is an object lesson to other communities. Stuart is a town of 2,000, located on the main line of the Rock Island railroad, forty-five miles west of Des Moines. It is on the across-the-state road known as the Great White Way, brought into existence and kept in good condition through the progressive co-operation of farmers and townspeople. The merchants of Stuart offered prizes to all farmers who would drive into town on a certain day on a road drag, adding special prizes to the farmer who came the greatest distance, to the one with the heaviest outfit and to the one riding the best drag.



TWENTY-FIVE ENTHUSIASTIC ROAD DRAGGERS LINED UP ON THE MAIN STREET OF STUART, IOWA, ON ROAD DRAG DAY.

Twenty-five farmers co-operated with the Stuart merchants and drove into town from their farm homes riding drags, the first prize ($3 in cash and a pair of gold spectacles) going to a farmer living ten and a half miles distant, who thus made a round trip of twenty-one miles astride a home-constructed drag. The second prize ($3 in cash) went to a farmer coming nine and a half miles, while the third prize went to a farmer whose round trip was eighteen miles. The prize for the best drag was a pair of shoes, the contestants deciding this feature by voting among themselves. The Stuart prize for the heaviest four-horse team hitched to a drag was won by a farmer whose horses tipped the scales at 6,720 pounds, the second heaviest weighing 6,180 pounds and the third heaviest 5,400 pounds.

Each farmer who rode into Stuart that day on a drag was welcomed on the main street by a delegation from the Commercial Club who furnished him with a market basket and certificates good in trade at practically all of the stores of the town. Armed with his market basket and his certificates, each of the farmers made the rounds of the stores collecting the articles of merchandise, which ranged from household necessities to personal trinkets and in value from twenty-five cents to several dollars each. In addition to the articles thus given him for his market basket each road-drag farmer was given twenty-five cents' worth of cigars, an ice cream soda, a pair of socks and a new necktie. One of the surprises of the day occurred when two farm girls appeared, riding a home-made drag which had been made comfortable and presentable by means of a seat taken from another piece of farm machinery, covered with rugs. The girls were among the most enthusiastic of the road draggers and by their example showed the manner in which the feminine members of any farm household may co-operate in this all important matter.

By means of twenty-five farmers making the round trip to and from town on road drags, the highways radiating from Stuart were put in splendid condition at the very time of the year when dragging was most necessary and when communication between town and country was most desirable, both from the standpoint

(Continued on page 25)

TWO PRETTY IOWA FARM GIRLS ADDED IMPETUS TO THE ROAD-DRAGGING CAMPAIGN BY ENTERING THE STUART CONTEST—THE FOUR-HORSE OUTFIT WHICH WON THE PRIZE FOR THE WEIGHT, TOTALING 6,720 POUNDS.

Des Moines, Iowa.

TYPE OF HOG HOUSE DISCUSSED.

At the last annual meeting of the Iowa Swine Breeders' Association the relative merit of the larger central hog house and the individual inexpensive portable cote was considered. Mr. George T White, of Dallas county, Iowa, in speaking of his central hog house, said:

I spent considerable time in studying out the plans of my hog house two years ago. This house is twenty-three feet wide and fifty feet long, faces the south; pens seven by eight, and alley seven feet wide. The partitions are all on hinges so they will swing around cross ways and the crosspieces all on hinges so you can turn it from a dozen small pens into two large ones. There is only one door which opens out into the orchard and pasture beyond. I have two good-sized windows for each pen in the south side and in the upper part two full windows. No matter where the sun shines my hogs will get it. The floor is cement throughout and level, but if I were to build again I would build the alley floor level and the pens with about two or three inches slope.

Mr. White also recommended the use of a certain number of individual hog houses, these to be used for various purposes particularly where it is necessary to put litters out on different pastures. Mr. L. C. Reese, of Adams county, Iowa, who had previously had some experience with a central hog house, pointed out that he had completely changed his attitude in regard to its merit and among other things said:

Up to five years ago I had a hog house that cost me nearly $1,000. Then I had the misfortune to lose it by fire. I never raised as good pigs in that hog house as I have raised since. I have now twenty-six individual houses. When it comes farrowing time I hitch an old horse to a sled and I can feed them and care for them as quickly and easily as if they were all in a large hog house. And when they farrow you won't have the trouble with one sow disturbing all the rest. To build a hog house now about sixteen by thirty-two will cost you about $375 or $400 the cheapest way you can. That will accommodate about twelve sows, which gives them a pen six by six with a four-foot alleyway. You can build individual farrowing pens at about $12 apiece, and you can put them wherever you want them. You can tell just what each sow is doing, and the pigs won't rob other pigs.

On the same subject Mr. H. F. Hoffman, of Cherokee county, Iowa, endorsed the central house, but in addition uses the individual cotes to some extent. Speaking of his plan Mr. Hoffman said:

You ought to keep them separate and they will do much better. We have both large and small hog houses and we have all our pigs farrow in the main hog house. I will admit that if you keep so many together they won't do so well, but we don't aim to keep too many together. As far as I am concerned I will take the large hog house as a matter of convenience. We have water, stoves and a cement floor and it is not much to take care of them and I have not had a pig with thumps for ten years or one with scours. Our hog house is well ventilated and it is not damp. We have some individual hog pens and use them sometimes, but it always seems to me you can get better ventilation in the large house.

After all, it depends somewhat upon conditions whether the central house should be used or simply the small cotes. Many a man, however, has made the mistake of waiting year after year until he could afford to build a central house before taking up hog raising on anything like an extensive scale. As a matter of fact, a few $12 or $15 houses will contribute more quickly than any other factor that we could mention to the building of a central hog house if that seems to be necessary as the outgrowth of an experience with the small house plan.

TEXT-BOOKS FOR AGRICULTURE.

Practical, elementary agriculture has been added to the course of study of the public schools of many of the grain-belt states, the legislatures of at least three states taking the necessary action last winter. The problem of selecting the text-books now devolves upon the school authorities. The success of the whole experiment, it will be conceded, depends upon the thoroughness of the text-books and the practicalness of the teachers. Given these two requisites, there is no reason why agriculture should not be taught as successfully as any other branch of learning.

It is gratifying to note that one state is meeting the emergency in the big manner in which it must be met if the experiment is to succeed. Kansas is one of the states which has recently taken the necessary legislative action to introduce elementary agriculture in the public schools. But Kansas realizes that the agriculture which is to be taught is the agriculture of Kansas, not of New York or Maine or California or any other state. Where, therefore, can it obtain a text-book which will meet local conditions, rather than indulge in mere glittering generalities? Kansas proposes to write its own agricultural text-book, practically all of the workers in the state agricultural college banding together to write on the subjects in which they are most proficient, the book to be submitted to the state school book commission along with any others from regular publishing houses and thus take its place in an open competition for practicalness and thoroughness. But more than this, the Kansas authors propose, if their book is accepted, to give the manuscript to the state free of charge, asking not a cent, royalty in order to help along the movement in the time when it most needs help, its infancy.

We are indebted to a subscriber for the following statement issued by President Waters, of the state agricultural college, during the past week:

Each chapter is going to be treated by a specialist. The chapter on home gardens will be by a man who has had many years' experience in gardening and many years' experience as a teacher. The chapter on corn will be by a man who has devoted practically all his life to corn experiments. The same plan will be followed in the texts on wheat, alfalfa, oats, horticulture, seed testing, plowing and the cultivation of the crops. Each experiment that will be suggested will be along the lines of practical agricultural work in Kansas alone, and each test that is explained will be of some test the college itself has made in Kansas and under all conditions of Kansas soils and climate. The book will be written by teachers in these subjects and the text arranged as experience indicates to be the best methods of instruction in agricultural subjects. The book is not intended to be a general text on agriculture, but a text on Kansas agriculture, and treat every phase of this work in Kansas as fully as possible for school work and offer many suggestions for continuing the work outside the schoolroom after the children get interested in it.

In this respect, as in many others, Kansas is taking a lead which other grain-belt states might well follow. Successful agriculture is largely a matter of adaptation to local conditions. The successful text-book will be that which appeals to the boys and girls through the language of the home fields. The corn-belt boy cannot be taught elementary agriculture in cotton terms, nor can the boy of the wheat belt be led into practical agriculture through the same channels as the boy of the rice, the apple, or the orange belt. It is highly essential that the text-books, on which the educational experiment is to made, shall be thorough and practical, with a local appeal and flavor. The Kansas educators are starting right.

COST OF MAINTAINING WORK HORSES.

Prof. Thomas A. Hunt, in his work outlining the things that a young farmer should know, takes up the matter of cost of maintaining work horses. Making a summary of the experiments carried on at the Minnesota and Ohio stations he says:

At the Minnesota station the total cost of feeding and maintaining a farm work horse for one year was estimated to be from $75 to $90, of which about $20 was charged for interest and depreciation. On the basis of 3.3 hours as the length of the working day the cost per horse per hour was estimated to be seven and one-half cents. At the Ohio State University it was found that four horses weighing about 1,400 pounds were chosen to perform 2,185 hours of labor during one year, while under like conditions four horses, weighing about 200 pounds less, worked on an average but 1,641 hours each. For each secular day, therefore, the former worked about seven and one-half hours, while the latter were employed but five and one-half hours. The cost of food was estimated at $54; cost of shoeing, repairs of harness and stable supplies at $6.50; and the cost of feeding, grooming and cleaning of stables at $23.50; or a total cost of $84 per year. Nothing was charged for interest or depreciation, but the expense of feeding and caring for three colts was included in the estimates given. The annual expense of maintaining a horse was practically the same in both states, but the cost per hour of labor performed was less because of the possibility of employing the horses at productive labor a larger portion of the time. Too much emphasis cannot be placed upon the need of planning a farm organization which will give continuous employment to horses as well as to men in order to realize the most profitable returns. An industrial system that makes it necessary to maintain work animals three days in order to secure one day's work falls far short of an ideal.

The cost of maintaining work horses undoubtedly constitutes one of the big leaks of the farm. A certain amount of power is required for handling a given area of crops and we come to regard the matter of maintaining horses as one of the fixed charges in production. It is not that the horse does not pay well while he is at work, but rather that his idle hours mean relatively a large upkeep for a given amount of labor.

Remedies might be suggested, one of which is that under certain circumstances the farm tractor can be made to take the place of horse power. When the tractor stops work the expense stops. Another plan that is working out well on a great many farms is the result of keeping a number of mares so that these are called upon to perform the dual purpose of raising colts in addition to fulfilling their function as draft animals. Where the right kind of mares are used and in turn these are bred to good stallions the cost of maintenance may be wholly wiped out by the value of the increase. A good, sturdy colt can do considerable (work as a two year old and after that he can at least partially pay his way until he is ready for market.

There is still another plan by which the cost of maintaining the work horses may be cut down. We refer to pasture improvement. The average pasture at the present time produces only about one-half of what should be produced. By a system of top dressing and spring disking, in addition to a little supplementary seeding, grass production could be greatly increased and this would mean cheaper feed for the work horse.

MILLIONS FOR GOOD ROADS.

A national system of highways, 18,000 miles in extent, and costing from two hundred to three hundred million dollars is being promoted by two former members of congress and already has the endorsement of two well-known organizations, the American Automobile Association and the National Old Trails Road Association. The immense sum necessary for the work is to be raised, according to the plan of the promoters, by an increased tax upon tobacco. The work is to be done by means of the machinery with which the Panama canal is now being constructed.

Stanton Warburton, a former member of congress from the state of Washington, is the father of the federal-built national-highway idea. Mr. Warburton believes that the government must, soon or late, build and maintain national roads and that the start already made (in the Shackleford and Swanson bills, providing for state aid in small amounts and for appropriations to states according to their population) is going about the matter in an altogether wrong manner. He would have the government build the roads itself, just as it is digging the Panama canal, and not delegate the work to any state. Addressing the National Old Trails Road Association at Kansas City a few days ago Mr. Warburton outlined his plan in this manner:

I claim above all else for my plan that it treats every state alike, large or small, rich or poor, and, furthermore, that my system will serve the greatest number of people. My plan provides for 18,000 miles of highways, and, on or within ten miles of these highways, live two-thirds of the inhabitants of the United States. I would have the government build the best road that can built and by that I do not mean a macadamized road, for that is not the best. I will insist upon 18,000 miles of pavement in my system, pavement equal to the best in the streets of any city. My roads will cost from $15,000 to $20,000 a mile and it means a total cost of about $300,000,000. That figure at first staggers congressmen to whom I have outlined my project. They ask breathless, "How will you raise the money?" I propose to obtain the money by increasing the tobacco tax, the least taxed luxury in America. By increasing the tobacco tax to where it was in 1879 the government will acquire $70,000,000 a year, which will build my system and pay for it in five years.

At the same meeting this same idea was endorsed by another former member of congress, J. M. Miller, of Kansas, who advocated the use of the Panama canal machinery in national road building. "The building of the Panama canal at a cost of one-half billion dollars is a good investment," asserted Mr. Miller, "but I believe fifty thousand miles of permanent national roads would be a better investment, one in which every man, woman and child in the nation would share the profits every time they used a foot of the road."

The Old Trails Road Association is not the only one interested in road building on this large a scale. At the recent American Automobile Association's federal aid convention, in Washington, a meeting in which forty states were represented, the following resolution was adopted:

Resolved, That we recommend the federal government to build and maintain an interstate system of national highways connecting the capitals of the various states with the national capital to be extended from convenient points along the trunk line to every town having a population of 20,000 or more.

This same convention adopted a further resolution restoring approximately the tax on tobacco of 1879, to be used for the express purpose of building a national system of highways. The taxation plan is thus explained by an attendant at the convention:

This tobacco tax of 1879, if restored, will be imperceptible in its effect upon the producer and consumer of tobacco. To the consumer it will make a difference of one cigar in thirty, and with that small sacrifice would build the proposed system of roads in five years, after which time the tax can be repealed. It was this tax on tobacco which obtained the revenue with which the war with Spain was fought. It is this tax which has been twice repealed for the express purpose of reducing a surplus revenue.

With two notable associations back of it, the idea is bound to gain headway, although whether practical and adoptable it is not yet possible to say. This much is certain, the question of state aid and federal aid for road building is coming in for more and more discussion every year. More progress has been made within the past five years in the all-important matter of big apropriations for road building than in a quarter of a century prior. It may be that the time is not far distant when people will think in millions on this road matter where they think in hundreds today. At any rate, the discussion is important, opening the eyes of all to the value and the availability of good roads.

FILLING TILE DRAINS PROMPTLY.

There has been a very heavy demand for tile emanating from the farms of the corn belt during the last five years. More and more the idea is finding lodgment in the minds of men who till the heavier soils that a system of tile drainage constitutes a form of investment that will pay larger dividends than can be realized from a similar investment made in any other way. To those who are tiling the experience of one of our Iowa subscribers may be of interest and profit. Among other things this subscriber says:

I am going to submit a little of my personal experience in tiling land, hoping thereby to prevent others from making the blunder that has cost me not only much worry, but considerable loss. It was all due to the carelessness or indifference of a neighbor whose drainage water found outlet through my tile. I put in a system of drains ten years ago on an eighty-acre field. Realizing that the water from a neighbor's forty naturally flowed in the direction of my main tile I used a larger tile than would have sufficed for my own use. My system worked per-

fectly for a period of seven years and it converted land that formerly produced nothing but red top and swale grass into a most productive area. This field has produced as high as eighty-five bushels of corn per acre since it was tiled. Three years ago my neighbor, observing my good results, decided to tile out his forty acres and here comes in the beginning of my trouble. He started his system at the end of my eight-inch tile and as the work proceeded he put down his tile and placed on them about six inches of soil. The work trailed along somewhat slowly, but in due time he had several hundred rods in this condition. I appealed to him two or three times to keep the ditch filled, fearing that heavy rains would wash this soil into the tile and down into my main. Not realizing the seriousness of this neglect the ditches were allowed to remain open for a period of three or four months and during that time we had several very heavy showers. After these heavy rains an examination of his drains would show places where the soil above the tile had disappeared and of course it passed into his tile and down through my outlet. Eventually the ditches were covered and the very thing that I feared happened. It has resulted in depositing enough soil in my eight-inch tile to reduce its capacity more than half. I have examined it in two or three places and find that there is a great deal of soil in the tile and I presume that in the depressions, if there are any, the tile is almost full. There is nothing for me to do, in my opinion, but to take up that main tile and relay it and I am writing you this note in order that your subscribers who are interested in tile draining may never make the same blunder that was made in this case. If I were putting in another system I would never leave a day's work without tramping in at least a foot or possibly eighteen inches of soil on top of the tile and under no circumstances would I adopt the practice of the ordinary drainage man, namely, that of throwing in about six inches of soil. I would much rather leave the tile bare, if I could not take the time to tramp in a sufficient depth of soil to prevent the water from carrying it down through the tile.

This is an exceedingly important phase of the tile drainage problem, particularly so where the fall is slight. Unless tiling is done with an extraordinary degree of care there will be slight depressions in the line of more or less frequency and these are sufficient to start the trouble if the washing of soil should begin. Just as the weak link in a chain determines its strength, so the capacity of a line of tile is often determined by the clearance of the smallest bore. Furthermore any collection of sediment along the line means that from that point on the water will slow up as it passes to the outlet and this means that gradually the filling up process will be carried on. We hope that those of our readers who expect to do some tiling this year will keep this point in mind because it is expensive work, but it is nearly always a highly profitable form of investment if every branch of the operation is well done.

LAND SPECULATION.

One of the largest transcontinental railroads of Canada, the greatest public service corporation in the world, has adopted the policy of absolutely refusing to sell land to speculators, making it one of the iron-clad provisions of sale that the purchaser settle upon the land within six months and put it in cultivation. This railroad was granted twenty-five million acres of public land when it was constructed, thirty years ago. Much of that which has already been sold has gone into the hands of speculators who are simply holding it for the rise in value which is almost inevitable, because of the large number of American farmers who are settling in the western Canadian provinces bringing the country up to a high state of cultivation. The railroad proposes to put an end to this and demands hereafter that the man who buys the land live upon it and till it.

The action of this railroad is commended by one of the large American magazines, which quotes a letter received from the vice-president of the corporation, having this to say on the general proposition of land speculation:

We don't want a few rich gentlemen to sit in their offices in London and New York and hold our land out of use until other people's industry gives it a value that they don't earn. The capitalist-speculator is the curse of a new country. We never much minded the farmer-speculator, because as a rule he gets enough real work done on a virgin soil to pay his way; but land speculation as broadly understood is a detriment not only to the railway, but to the public welfare. The public interest and the interest of the railway are identical here, because they both demand a producing population. Mere capital invested and tied up in lands means nothing to us or the public. Besides, the ownership of land is really a public trust. We don't consider that we own our land in the same sense as we own our cars, engines and steamships, for instance, because these are products of labor and the land is not. Strictly speaking, land is always public property, and can never be absolutely alienated. We think we have a right to take a reasonable profit out of land for services rendered in making it accessible, but we have always felt bound, and it has always been our policy, to administer our control of the land in the public interest, and we think this means letting it go to those who will use it instead of to those who will merely hold it out of the market. I don't want you to think we are posing for anything but a mercenary and hard-fisted corporation. We reckon that every bona-fide settler working and producing along our line is a minimum permanent asset of $1,000 to the railway. That is the important thing to us; but at the same time we cannot help seeing that if he is worth $1,000 to us he must be worth at least that much to the Dominion.

We believe, with the editor of the American magazine, that "for progressive public spirit as well as sheer business wisdom" this action is "noteworthy in railroad history." Canada has been held back by the avariciousness of land speculators, who were a liability to the country rather than an asset. The experience of Canada has been the experience of practically every new country. It is unfair that the men who go into a new land and open it to cultivation should not reap the benefit of the advance in land value, at least equally with the man who buys the land simply as an investment and holds it, unimproved, to reap the benefit of the industry of the actual settler. The Canadian Pacific railroad is a corporation, one of the biggest in existence, but it is actuated by more than mere good business sense when it puts this new policy into operation. It shows that it has the welfare of the people along its lines at heart, realizing that there is a moral responsibility incumbent upon the agent who lures a person into a new and untried field. The history of many new parts of the United States, where lands (many times arid and absolutely worthless) have been sold to unscrupulous promoters without a thought of the moral responsibility of taking care of the people who buy, would have been far different if this new Canadian policy had prevailed.

Weeds have caused more trouble with alfalfa than any other thing. On account of the danger of trouble with weeds in spring seeding and the liability of interference by drouth in late summer seeding, it is undoubtedly safest and best, when it can be done, to spend the spring in ridding the ground of weed seeds and then sow the alfalfa alone about the end of June or the early part of July. In this case the ground should be plowed in the spring, turning under some manure, if possible, and then harrow every ten days or two weeks until seeding time. Each successive harrowing will kill the lot of weeds that have started and put a fresh lot of seeds in a position to germinate, until finally all weed seeds near enough to the surface to grow will have been destroyed.

The department of agriculture states that only 19 per cent of the corn crop leaves the farms, and that of this percentage 9.1 per cent is used for flour and grist mills, 4.4 per cent is used for feeds in towns, 1.7 per cent is exported and 1.5 per cent is employed in the manufacture of glucose and starch. It is said that 1.3 per cent is used in the manufacture of distilled and malt liquors, of which eight-tenths of 1 per cent is for the distilled. On the farm corn is consumed about as follows: 31.5 per cent by horses and mules, 31.5 per cent by swine, 11 per cent by cattle other than milk cows, 10 per cent by milk cows, 4.2 per cent by poultry, 2.6 per cent by sheep, 1 per cent is used for seed and 4 per cent by human beings. The actual farm consumption for the last five years has totaled 85.6 per cent of the crop.

A boar with good individual characteristics, and backed by a good line of ancestors, is the one to tie your faith to in the swine raising business.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Keeping down the weeds will greatly assist in the extermination of the pesky flies.

Provide a lot for the cows to graze in at night. They will actually eat less than if half starved all night, and the milk flow will be more uniform in both quality and quantity.

Farm drudgery consists of spending ten hours in the field; then puttering around till ten o'clock at night doing chores.

Our local creamery paid forty-one cents per pound for butter fat for the month of March and many of our patrons averaged $10 or better for each cow in their herd. Milking and caring for cows is no snap, but cashing the checks helps smooth things over.

Be sure to use the narrow-tire wagon on soft fields and the meadow lands.

Make sure that the poultry buildings are well ventilated, so the chickens will not form the habit of roosting out on the fence, among the trees and on the farm machinery when the weather is extremely warm. Outdoor roosting might be all right for summer time, but think of the exposure when fall rains set in, and of the chasing it will cost you to round up the fowls and get them to roosting in the poultry building again.

Meat, bread and "taters" will not form a very desirable balanced ration for the family.

A good dinner bell on the farm is indispensable, as it can be used for calling the men from the field or the barn at any time, not only at meal time, but in case of accident, fire, visitors, etc.

A bolster spring for the farm wagon should be available on every farm.

If the sheep are quartered in buildings that are not amply ventilated, you will find that the confined heat will cause their wool to slip.

Use fine, uniform salt in making butter, especially for private trade.

One of the wise ones tells us to buy our shoes in the afternoon when the feet are spread from walking and thus get a perfect fit. This sounds reasonable, and no one should overlook anything that will help in getting a perfect-fitting shoe, but how about the harness on the horse? Does it fit perfectly from collar to crupper? It must be misery to work day after day in a harness that galls like an ill-fitting shoe.

Grow your own protein through clover and alfalfa, at the same time increasing the fertility of the soil.

Looking at those heaps of rotted hay where the stack yards were, do you not think it was somewhat wasteful to allow the stock to feed themselves from the stack? Resolve not to do that this season.

A dirty cream separator never does efficient skimming.

Where a stovepipe is erected through the roof of the shed kitchen, it should be raised high enough that the extreme top of it is above the highest point of the adjoining roof. This not only guards against sparks striking against the roof where the pipe is too low, thus setting the house on fire, but the stove will not draw well if the top of the pipe is below the line of the roof, especially when the wind is blowing against the slant of the roof.

Throw open the barn doors and keep the building dry.

The way to sharpen a disk is to pare off the blunt edge until thin and sharp. A neighbor of mine once took his disk harrow in to be sharpened, and the blacksmith, having no sharpener, heated each disk in his forge and pounded it out. There was no temper left; in fact, most of the disks fairly turned over when put to use. Thus the price of a disk harrow went in "finding out."

You wouldn't hesitate to work the hired man a few hours overtime in case of an emergency. Don't begrude him an occasional half-day's outing for fishing, hunting, etc.

We have just read where some fellow (presumably a farmer) advises using strong brine and soap-suds for lice on the cows and calves. He surely meant to use it in taking their hair off, for such a concoction would do it without fail. Strong soap-suds, a quart of kerosene (coal-oil) and a half-gill of crude carbolic acid added to twenty quarts of soft water, would sound more reasonable. We use it in these proportions, and it is fine for lice or as fly-repellant. Also a death-dealer for lice and mites in the poultry buildings.

When the cow kicks, sit on the milk stool till you count ten and you may not use the stool for a club.

When the housewife takes up dusty, germ-filled carpet this spring it ought to encourage every farmer in buying clean, sanitary rugs for the home. They are not only more conducive to cleanliness and good health, but they are easier to handle and, being reversible, are just as attractive and economical as carpets.

A clean, sanitary hog-wallow, with a good inlet and outlet, forms an ideal place for the hogs to fight lice. A generous sprinkling of reliable dip added to the water occasionally, will render the wallowing more effective.

One should make a close inspection of all drains about the farm at this particular season. Small animals sometimes crawl into the tiling and become lodged there, dying and completely choking the drain. Often a tile gives way and crumbles into the drain, closing it against the passage of water. Then, small animals often nest in the tiling, which soon checks the flow of water. Again, changed conditions of the earth's surface sometimes make it necessary to move entirely or materially alter the drain.

"Dope" your hogs with a handful of wood ashes for each animal, a teaspoonful of soda and a half-handful of salt. This will strike at the root of about all ailments in the swine herd—worms! Mix the above ingredients in mill-feed and feed in slop.

Too many of us bury the hatchet, but leave the handle sticking out for a good hand-hold.

If you try to nail or tie old, deadened bark back to the tree, it will do more harm than good, as it will not only fail to grow back, but will tend to deaden more bark, and perhaps the tree itself.

Take an idle hour or two one of these days and dig the borers out of the young orchard trees. They soon cut the life out of them.

No-Rim-Cut Tires
10% Oversize

Our 11% Reduction

On April 1st, we reduced our prices on No-Rim-Cut tires 11 per cent, on the average.

This was partly due to lower cost of rubber, partly to multiplied output.

Our policy is always to give you every cent we save. To keep our profits down to 8½ per cent.

That is one reason why Goodyear tires far outsell all others.

Rubber Prices

Cultivated rubber is becoming so plentiful as to force down the price of Para.

For the twelve months ending March 31st, we paid on the average $1.09 per pound. On March 31st, the price of rubber was 88 cents per pound.

On the other hand, fabrics, in the same time, advanced 15 per cent. Labor cost materially advanced.

So, on tires in general, lower cost of rubber has led to no large reduction.

Factory Cost

But Goodyear sales have doubled over and over. Immense new factories have been completed, with the most modern equipment.

Our output is the largest in the world. In motor tires it is nearly ten times larger than three years ago.

It was this multiplied output, in main part, which justified our 11 per cent reduction.

Our Profits

At the end of each year we advertise our profits. This is to assure you that in Goodyear tires you get all the value possible.

In times past this profit has averaged about 8½ per cent. And this reduction, in our opinion, keeps it that low this year.

Under this policy, and with our vast output, it will never be possible to sell equal tires for less than Goodyear prices.

Cost Per Mile

There will always be tires selling under Goodyears, until all learn that lesser tires don't pay. Tires can be made at half the Goodyear cost, by the use of cheap compositions.

But we shall see that you never, in any tire, get lower cost per mile. And that's the only right way to figure. We shall never offer, at any price, less than the utmost in a tire.

No Extra Cost

No-Rim-Cut tires, since this reduction, cost no more than any standard make of clinchers.

These tires never rim-cut. And 23 per cent of all old-type tires are ruined in that way.

In air capacity, No-Rim-Cut tires are 10 per cent larger than clinchers. And that, with the average car, adds 25 per cent to the tire mileage.

Yet these new-type tires, with all their advantages, cost no more than old-type tires without them. That's why hundreds of thousands of motor car owners have come to No-Rim-Cut tires.

Your tire upkeep will be immensely lowered when you adopt them, too.

CURRENT EVENTS

FREE wool was upheld by the lower house of congress, in the Underwood tariff bill, by a vote of 74 to 193. The republican minority, under the leadership of Representative Mann, of Illinois, attempted to amend schedule K of the bill by providing for a duty of 18 cents a pound on raw wool, and corresponding duties on woolen goods, but all efforts to amend the schedule were fruitless. The main tariff fight of the present session has been on free wool and graduated free sugar, but the democrats, led by President Wilson and Representative Underwood, have been successful in each instance. The tariff bill went to the senate last week and the upper house now has the various schedules under consideration. It remains to be seen whether the democratic leaders can keep the party members intact in the upper house as they did in the lower. If so, the new tariff bill will become a law within a very few weeks. Should the senate democrats show an inclination to object to some of the schedules, President Wilson proposes to hold personal conferences and even to go upon the stump in a campaign to enact the tariff bill exactly as it stands. The bill passed the house, in its original form, by a vote of 281 to 139. The finance committee of the senate will consider it, pro and con, for four or five weeks, after which it will come to a vote in the senate.

BOTH houses of the California legislature, by almost unanimous vote, passed the alien land act to which Japan objects and because of which Secretary of State Bryan spent the greater part of a week in Sacramento, as President Wilson's representative. The bill went to Governor Johnson and although he is extremely favorable to it, he withheld his signature until Secretary Bryan could return to Washington, confer with the president and file any protest desired. It is considered a foregone conclusion, however, that Governor Johnson will sign the bill. Secretary Bryan intimated that a referendum vote of the people would be demanded. If a petition can be secured with 20,000 signers it will be necessary to submit the new law to a direct vote of the people before it can be enforced. This vote would not be taken until the fall of 1914, so that the law would be held in abeyance in the meantime, giving opportunity for diplomatic negotiations between the United States and Japan. Somewhat similar anti-alien land laws are already on the statute books of Missouri, Washington, Arizona, Minnesota and even the District of Columbia, but Japan feels that the California law is aimed at it so directly as to be a national affront. The Japanese own but a small trifle of land in California, as compared with the immense area of the state, while Japanese immigration to this country is on the decline. At the same time the Californians assert that no sooner do the Japs buy land than the neighborhood prices decline and so a wrong is done to other landowners. The situation is a delicate one, but at the worst it will be referred to the international tribunal at The Hague for arbitration, so that hostilities between the two nations, as a result of the state law, are remote.

FEAR of a general European war, growing out of the Balkan crisis, is dissipated by the action of Montenegro in surrendering the stronghold of Scutari, taken by King Nicholas after a siege lasting six months. The Montenegro monarch announced first that Scutari could be taken from him only over the dead bodies of all his people, but better counsel prevailed and the surrender was made to the big powers last week, under promise of territory to Montenegro to offset the surrendered stronghold. The city of Scutari is to be made the capital of the new kingdom which is to be formed under the name of Albania, under the suzerainty of Austria. It was this latter country which demanded that Montenegro surrender the stronghold which had been won at such great cost and while Montenegro refused to give in to the Austrian demands it did surrender when all the big European powers joined with Austria and pledged that equal territory would be forthcoming for the withdrawal from the city which the Montenegrins so wished to retain. While all this is going on the Turk is being driven still further toward Asia, so that the present Balkan war bids fair to permanently rid Europe of "the unspeakable Turk" and all that he stands for.

PRESIDENT WILSON campaigned in New Jersey a couple of days last week endeavoring to bring about the jury reform which was one of those he had prominently in mind when he took up Jersey affairs as governor and to which he pledged his support when elected president, promising to return to his home state and campaign should the legislature fail to enact the desired law. What the president seeks is to have the power of drawing juries taken away from the sheriffs and placed in the hands of non-partisan commissions. He devoted the greater part of his recent tour to Essex county, the stronghold of "Jim" Essex, the radical democratic boss who has long been a political enemy of Wilson.

All nine assemblymen from that county are standing firmly against the jury reform and the president pleaded with the people to turn against the men who thus stood between them and self rule. President Wilson struck the keynote of his attitude, which has a national significance, when he said: "We want to redeem the jurisprudence of this state not only of the suspicion, but of the stain that men are not equally treated in these courts of law. The political machine of which it is misused in the state as in every other state of the Union is where the machine controls the sheriff's office. If you want to strike at the center and heart of corrupt politics, see to it that you put the control of grand juries into impartial and non-political hands. I am not of a sanguinary or a belligerent nature, but I got on the train today with a light heart, for if you tell me that there is something afoot to cheat the people in getting something for themselves, I am your man, enlisted for the battle." The president was cordially received and has high hopes that his stand will clear up the jury muddle not only in his home state, but elsewhere in the nation, where conditions are practically as bad as in New Jersey.

A MAMMOTH suffrage demonstration in New York was participated in by over 20,000 women, representing practically every state. The scenes of disorder which marred a similar demonstration in Washington were not in evidence in

The Power of Silent Service

If the crowd on the stock exchange kept quiet and let one man talk, that man could be heard in every corner of the room. But the shouting members produce a composite of sound, so that no one trader is understood except by a small group around a particular trading post.

If everyone were able to shout twice as loud, the result would be only a greater noise, and less intelligible.

For communication to be universal there must be silent transmission. In a noisy stock exchange where the voice, unaided, cannot be understood across the room, there are hundreds of telephones which carry speech half way across the continent.

The telephone converts the spoken words into silent electrical impulses.

In a single Bell telephone cable, a hundred conversations can be carried side by side without interference, and then distributed to as many different cities and towns throughout the land. Each conversation is led through a system of wire pathways to its proper destination, and whispers its message into a waiting ear.

Silent transmission and the interconnecting lines of the Bell System are indispensable for universal telephone service.

Without such service, our cities would be slow of speech and the States would be less closely knit together.

Cartercar The Most Practical Car!

You can drive and enjoy any Cartercar even if you do not know anything at all about mechanical construction. First, it will travel any roads you wish, even going up steep grades, and then it is really trouble-proof because of the gearless transmission, with only two unit parts. Unlimited speeds, double tire mileage, no jerks nor jars, and many other exclusive features. Simple speed control. No other car at any price can give better service—none as good for the price.

Big Catalog Ready

Even if you are not quite ready, send for this book now. It's mighty interesting and will give you some new ideas regarding motor car values.

Cartercar Company, Pontiac, Mich.

Model 5A—Five-passenger Touring Car, with electric starting and lighting system, complete equipment—Price f.o.b. Pontiac $1700
Model 5B—A big classy Roadster, with Electric starting and lighting system and complete equipment—Price f.o.b. Pontiac $1600

Shirley President Suspenders

The adjustable back overcomes every drawback common to ordinary suspenders. Light, Medium or Extra Heavy. Extra lengths for tall men. Satisfaction or money back.
Price 50 cents, any dealer or the factory.

SWP

Your farm is more valuable if your farm buildings look well and are well preserved

The way to keep them so is to keep them well painted, and the easiest best and most economical way to do this is with S W P (Sherwin-Williams Paint Prepared.)

Easiest because S W P comes ready to use—thoroughly ground, mixed and put up in sealed cans—and because it can be had from dealers everywhere, any time.

Best and most economical because it spreads over the largest possible surface and lasts for the longest possible time.

SWP takes hold of the surface and keeps its hold through sun-glare and snow and rain. It is made of pure lead, pure zinc and pure linseed oil, combined with the necessary driers and coloring matter. It is scientifically prepared to give the greatest possible satisfaction.

Before you do any painting, be sure to send for our booklet, "Paints and Varnishes for the Farm." It gives much valuable information in small space and will help you to decide what paint to use in different places. Write us for this booklet today.

SHERWIN-WILLIAMS PAINTS & VARNISHES

Best dealers everywhere. Address all inquiries to The Sherwin-Williams Co., 683 Canal Road, Cleveland, Ohio

New York, the police maintaining good order and the spectators being friendly, instead of inimical as in Washington. Theodore Roosevelt was the principal speaker at the rally which accompanied the demonstration, urging the women to continue their fight and pledging further progressive support. The New York legislature has adjourned without adding that state to the suffrage list, but the movement has undoubtedly gained great headway there. Already nine states of the forty-eight in the Union grant women unrestricted suffrage and a strenuous campaign is being waged at present in four others: New Jersey, Maryland, Connecticut, and Massachusetts. Suffrage leaders are confident that before two years more have passed equal suffrage will prevail in a fourth and possibly a third of all the states.

THE STALLION LAW GETS ANOTHER.

To the Editor of The Homestead:

I, too, read M. Smith's opinion of the Iowa stalion law, also Mr. Stire's and Mr. Trueblood's, and I believe the last-named gentleman sees the stallion question in its true light.

A few years ago The Homestead gave the horsemen in this community a big boost in the horse show at the institute held at Ankeny. At that show and all the others held in this community we have buyers from the east as well as our home buyers, paying big prices. They ransack the whole country; we don't have to take our horses to market, the market comes to us.

Who brought this market to our own barns at the highest prices ever paid for grade geldings and mares? Was it the Iowa stallion law? Surely not! It was undoubtedly the men who had the nerve to buy good pure-bred stallions and stand them at a reasonable fee so that all their neighbors could use them, doing their part to get better grades. When we get a new horse we get a good one, but we keep the old one until the new one is tested and proves to be O. K.

Now comes the stallion man's hard luck. All this time he has been taking chances with his horse. Today one of his horses gets kicked on the hind leg, tomorrow one gets thrown and causes a puff on the hock, next the horse gets hot from exertion and catches cold, and off goes his wind. Right here I will say that I have handled stallions for more than thirty years and I have only been able to take two stallions past ten years with sound wind, and I don't believe my neighbors will say I am careless.

Now the law requires that I get a veterinarian to examine my horse and tell my neighbors whether they can use him or not while I pay the bill. If that is not an imposition I do not know what is. In this community a year ago there were fifteen pure-bred stallions old enough for heavy work and they had plenty to do. At present there are eleven stallions and three two-year-old colts, two of which I know are for sale before they have any mishap. There are two grade stallions on the stand this year where there has not been a grade stallion here for ten years and I give the Iowa stallion law all the credit for the change. Most of the older horsemen prefer to step down and out rather than take the risk of having their horses condemned through a mishap.

Polk county, Iowa.

MUTTON AND ITS VALUE IN THE DIET.

Many experimental studies of the relative nutritive value of different kinds and cuts of meat, the losses sustained in cooking meat in different ways, the thoroughness of digestion of meat and the effect on palatability and economy of different methods of preparing it for the table, and similar questions have been studied in connection with the nutrition investigations of the department of agriculture, Washington, D. C.

Mutton and lamb have been widely used in many countries since early times as staple foods. In later years lamb has been more popular of the two in the United States, perhaps because special attention has been given to raising lamb for the market and to extending its season. The whole question is simply one of taste, and mutton in some form or other has always been a staple and a favorite food. That it is wholesome as well is generally believed, and this is borne out by inspection work of the department of agriculture, which shows that it is relatively seldom that mutton has to be rejected as unfit for food.

In composition and nutritive value mutton is practically the same as beef, and the average loss of weight in preparing the two kinds of meat for the table is also practically the same.

Buying in quantity is recognized as an economic procedure where the housewife has facilities for storage. There are many cases in which a side of mutton can be economically purchased for home use where a side of beef is too large for such a purpose, which implies an economy in the selection of mutton.

As regards digestibility, there is no practical difference in beef and mutton, both being very thoroughly assimilated. The characteristic flavor of mutton is commonly said to have its origin in the fat. It is generally relished, and may be developed or modified by various methods of cookery to meet the tastes of the family. That mutton fat can be used in the household in many ways has been demonstrated by experiments which have been made with it.

The ways in which mutton can be prepared for the table are very numerous. Some of these are well known to the housewife, and others are less familiar. All are worthy of a trial, since the ability to make many dishes with any given foodstuff is an easy way of securing variety in the diet, which is so desirable. The housewife who wishes to economize can make many savory dishes from the inexpensive cuts of mutton, which are palatable as well as wholesome.

Judged by its composition, palatability, wholesomeness, digestibility, relative cost, and the number of ways in which it can be prepared for the home table, mutton is an important foodstuff, which is well worth the attention of the housekeeper who wishes to provide her family with an attractive and palatable diet at a reasonable cost.—[United States Bulletin.

The Original Air Cooled Engine

R. E. Olds, President

It is a guaranteed Air-Cooled engine that has been on the market for over ten years. It is no experiment as it was designed and is manufactured by Mr. R. E. Olds, who has built more gasoline engines and automobiles than any other man in the United States.

This is a self-contained power plant for the farm that can be put in operation in the shortest possible time, no delay to thaw out or provide water for cooling.

It Is a Simple and Reliable Engine

Sold under guarantee to cool and give satisfaction.

Let us send you our catalogue which fully illustrates and describes the simplicity of this engine. *Write us today.*

The Original Gas Engine Co.
Dept. D
Lansing, Michigan

The Rat-Proof, Rain-Proof Bin

Protects grain from fire, water and vermin—saves insurance—keeps grain in perfect condition. You can hold grain for better prices, without fearing it will be damaged when you store it in a

BUSHNELL Galvanized Steel Grain Bin

This *portable* bin means *more economical handling* of grain. Costs no more than wood—is everlasting—can't rust or break. A *permanent money-maker.* Write now for descriptive booklet.

Bushnell Tank Works, 700 Dean St. Bushnell, Ill.

Get this Splendid SURREY for your Family

After all, there's no driving quite equal to a good carriage, behind a fine pair of horses. And remember, you *can't afford* to risk the safety of your wife and children in a cheaply-built carriage. Get a good, *reliable* surrey while you are at it; get a carriage that combines style and beauty with comfort and *absolute dependability*.

KRATZER Quality CARRIAGES

are best—and cheapest in the end. They are made right here in Des Moines, by men who know exactly how to build a carriage to stand hard travel on our Middle West roads. The tires are "*hot set*" by hand. The springs are very flexible yet capable of carrying the heaviest load. Only the finest seasoned hickory is used. Backs and cushions covered with all-wool broadcloth or genuine leather. An elegant, roomy, easy-riding, light-running surrey you will always be proud of.

Sold by best dealers

If there is no Kratzer dealer near you, write us direct for prices and important facts about carriages.

CONCRETE MACHINERY

Did you ever stop to consider that the secret of good, durable concrete is largely due to the mixing; that no matter how careful you may be in getting the proportions correct, if it is not properly mixed it is worthless?

The Iowa Line of Mixers All Mix Perfect.
Manufactured by
Iowa Foundry & Mfg. Co.
FORT DODGE, IOWA.
Everything in Concrete Machinery.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

HUSBAND AND WIFE—PROPERTY RIGHTS.

A Subscriber, Winterset, Iowa.—A and B are husband and wife, and have no children, but A has one child by a former marriage. They bought a farm with an estate of B's, going in debt for part of the price, and made money off the land to pay balance and improve the place which is now valuable. The deed to the farm is in the name of B. They also bought town property, the deed being to A and B. (1) If neither one makes a will or other disposition of the property and A survives B, can A hold the farm during his life, or if not how will it be divided? (2) If B survives A how will the farm be divided? (3) On the death of either how would the town property be divided? (4) Upon the death of either how would the household goods and furniture and musical instruments be divided?

Answer.—(1) Assuming that the wife has no children or descendants, A would be entitled to half the farm, and the wife's heirs to the other half. (2) It will not be divided at all. B will continue to own it, and it will go to her heirs at her death. (3) If A dies first, his heir will be entitled to one-third of the town property, and the widow to two-thirds of it, but if B dies first her husband will be entitled to three-fourths of the town property, and her heirs to one-fourth of it. (4) Assuming that A owns the household goods and musical instruments, and dies first, the widow must have the widow's allowance, and one-third of balance, and A's heir two-thirds of balance. If wife owns them and dies first A would be entitled to one-half of them, because B has no children.

PUBLIC SALE—DEFECTIVE ANIMALS.

A Subscriber, Carlisle, Iowa.—Where a man has a public sale of live stock and sells horses, saying nothing about them except to state their ages, and persons who purchase horses at the sale afterwards find them to be subject to sick spells, or moon eyed or having other defects, can they recover damages from the sell?

Answer.—They cannot recover damages. Where no misrepresentation is made by the seller of animals at a public sale, the purchaser buys at his own risk, as to quality and condition of the animals he buys.

RENTAL AGREEMENT—CLEARING LAND.

A Subscriber, Webster City, Iowa.—A leased B's farm for three years beginning March 1, 1913, and ending March 1, 1916. There is some timber and a large lot of hazel brush on the land. By the terms of the lease each party is to furnish a team to do the farm work. A is to do the work and B is to furnish the farm machinery, and each one is to bear half the expense. All hogs on the place are to be owned jointly by A and B, and all other stock is to be owned jointly. When the ownership of such stock becomes equal, the lease is to cover all pasture land, as well as farm land on the place. B now demands that A shall cut, pile up and burn the hazel brush on the place, without getting any compensation therefor. If A refuses to do so can B prevent him from using the pasture? Nothing was said in the contract about cutting or burning the brush.

Answer.—A is not required to cut and burn the brush, and if he refuses to do so, B cannot lawfully prevent him from using the pasture. The parties should make some further amicable agreement about disposing of the brush, and thus avoid landing themselves in a fool lawsuit about a comparatively trifling matter.

CORPORATION—CAPITAL STOCK.

A Subscriber, Grand River, Iowa.—In organizing a pure-bred cattle breeders' association does the law require all the capital stock to be fully paid and is the personal property of the members liable for the debts of the association?

Answer.—The law provides that no corporation organized under the laws of the state of Iowa, except building and loan associations, shall issue any capital stock or any certificate or certificates of shares of capital stock, or any substitute therefor, until the corporation has received the par value thereof, in either money or property, and if in property, the executive coun-

Regal

From Hundreds To Thousands

SOME six years ago we built our first hundred automobiles, but they were built with something more than brains and steel. We were determined to build into Regal cars a value that should be recognized in any and all competition—a value that would assure every Regal owner a good car, a dependable and long-lived car.

Now our yearly output totals thousands of Regal automobiles and our production is always oversold.

Just examine this REGAL—Ride in it—Test it.

REGAL MOTOR CAR CO.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

HOUSE FOR 150 HENS.

To the Editor of The Homestead:

A subscriber from Plymouth county, Iowa, asks for a plan of a poultry building suitable for 150 fowls, preferring to have it divided into three parts, one part in which to set hens, one for geese and the middle part for nests and to serve as a roosting room. Also a scratching pen.

Disposing of the goose question first, I would build a low, open-front shed as far removed from the chicken yards as possible. Geese need no elaborate quarters—just a shelter that is dry and kept well bedded with straw. Water fowl and chickens are not congenial companions or even neighbors. Chickens like and need clean water and clean quarters, while ducks and geese, as anyone experienced knows, seem to take a malicious satisfaction in producing reverse conditions. However, this is only a suggestion.

A score of years ago I dreamed of an ideal three-compartment poultry house. One part should be the roosting room, another the laying room, while between the two there would be a big room for scratching. To this latter room there would be sliding doors to close on stormy days and at night when the whole building would be as tight as a drum. Well, we live and learn—fortunately.

The first consideration in building a permanent house is the location. If there is a high, gravelly site available choose it. If not, create conditions as nearly like as possible. It will be time well spent to grade up a spot high enough to have good drainage. The south front is the best, the east next in line. If the house can be placed on the south side of barns or stacks they will prove a good windbreak, and I suggest a remote location from the hog pens. An old, long-nosed, yes, or short-nosed, sow can eat her head off in short order once she develops a taste for chickens. A building such as our correspondent is to erect will probably be "built" a long time.

The building material, whether wood, brick or concrete, is a proposition for the owner alone. Some authorities advise concrete and others would not "accept a concrete house as a gift." If in doubt lumber is a safe choice.

To satisfactorily house 150 hens under one roof requires 600 square feet of space. Three sides and the roof should positively be wind proof to avoid drafts. Always provide for ventilation to be on one side only. When the wind comes into the building from one direction and whistles through the house and out on the opposite side, then it is a draft. This sort of thing is a better starter for roup than if the fowls stayed in the trees all winter.

A building twelve by fifty feet should accommodate 150 hens. For that number it would be better to separate the flock at roosting time and also through the day if both hens and pullets are kept through the winter. A room at each end may be partitioned, each being twelve by ten feet. At the front of each of these rooms should be an opening fitted with a frame covered with muslin or burlap to be left open in mild weather and closed in cold, stormy weather. At each end and in front of the perches should be doors, but fitted so closely as to admit no draft.

In all plans for a poultry house always be on the alert to supply enough openings to admit the sun to every corner and crevice. The direct rays of the sun cause disease germs and mites to shrivel up. In the back of these rooms should be the perches and dropping boards—if you so desire. All minor particulars can best be worked out by the keeper, though a word of warning, I think, is admissible about avoiding complicated furnishings. Never have the fixtures of a poultry building stationary. Be able to throw it all out of doors on short order. If the mites ever get ahead of you, you will better understand.

Place the perches on a level and not more than three feet from the floor. If in a very cold climate or the large-combed breed of chickens is kept, a curtain is advisable to drop down in front of the perches at night. In this case the ventilator—the muslin-covered frame—could be left open except on stormy nights.

The middle room should be twelve by thirty feet and serve as a scratching, or dining room, sitting room and living room. This needs to be inclosed on the front with wire only, though curtains to lower in stormy weather will keep the litter from becoming wet. When our chickens must stay in damp houses we may expect anything that results from a cold.

If desired to separate the flock through the day a wire partition can be run through the middle room, thus practically keeping two flocks under one roof. This is desirable when keeping old fowls and pullets. The feed that is required to keep a pullet thrifty will make a two-year-old hen overfat and lazy.

I prefer the nests in the middle room. Insects do not multiply nearly so rapidly as if placed near the roosting quarters. A screen could be placed before the nests to give the privacy a hen desires. Flooring is desirable for the roosting rooms and if inclined will be easily cleaned. The best floor we have ever used in the roosting quarters was made from coal ashes. They were shoveled into the house while damp and tamped down solidly with an iron weight. This floor has dried hard and firm, and is very satisfactory. For the scratching room nothing equals a dry earth floor. Last, but not least, provide a great, big dust box in the warmest sunniest corner.

Minnie G. Stearns.

TUBERCULOSIS.

One of our Iowa subscribers, Mr. John H. Luth, writes as follows:

Will you please tell me what is the matter with my chickens? First they get lame in one leg, then in both, and their combs get pale. They eat, but mope around and get thin in flesh, dying within a week or ten days. They have been dying all winter, but today was the first time I opened one. Its liver was three times the ordinary size with large yellow spots all over it and the intestines were lined with small lumps. There were no spots on the heart, but great masses all around it. These chickens have been out doors every day this winter that the weather was fit, and have had access to a ventilated scratching shed when weather was too bad to be out and ventilated sleeping quarters. They were fed corn and oats in litter and sometimes sorghum seed. A bran mash mixed with boiled potatoes and milk was given at noon and corn at night, together with oyster shells and bran in hoppers. I suspect tuberculosis, but have not seen anything in your paper that covers all the symptoms.

All fowls sick with the same disease do not act alike. The outward appearance is manifested differently in different fowls and under different conditions. In this case the pale comb, loss of weight and general lassitude would indicate tuberculosis. The one that was cut open and the tubercles found on the internal organs settles any doubt about it being tuberculosis.

The direct cause is from a germ and they are getting uncomfortably numerous. Not every fowl that is exposed takes the disease, however. In this case there is a complication. The fowls have been weakened through mistaken kindness and enlargement of the liver was the result. They have been fed not wisely but too much, getting fat and flabby and, being debilitated, readily contracted tuberculosis. There is no cure for the latter once a fowl be comes affected. Kill every affected bird and burn the carcass. Admit sunshine to all parts of the building, burn the litter and spray with a disinfectant.

To improve the general condition of the flock feed very lightly of bulky food, cut out the corn and give an abundance of green stuff. Insist on less eating and more work. Give a teaspoonful of dissolved salts for each three fowls in the drinking water. As soon as a chicken is noticed to act as if it were out of sorts, give this one-half grain calomel and after twelve hours follow up with twenty grains epsom salts and two grains bicarbonate of soda.

POINTERS.

—The advertisement of E. E. Calvert, Shell Rock, Iowa, offering eggs from different varieties of land and water fowl appears elsewhere in this department.

—In a recent note concerning his Single Comb Rhode Island Red chickens, J. C. Porter, Ogden, Iowa, says: "My advertisement in The Homestead has been very satisfactory. I have been selling lots of eggs. For the remainder of the season I will furnish strictly fresh eggs at the rate of $4 per hundred." See announcement on page 12.

—J. E. Lewis, Brayton, Iowa, in sending copy for advertisement that appears elsewhere in this department, writes: "I am enjoying a good trade in Single Comb Rhode Island Red eggs and they are very fertile. The Fawn and White and Runner ducks are making a great laying record. They are of good color and are from prize-winning stock."

—Homestead readers in need of White Plymouth Rock eggs should read the advertisement of John W. Houselog, Bellevue, Iowa, that appears elsewhere in this department. He reports that his flock is in good, healthy condition. He is shipping nothing but fresh eggs, well packed and guarantees a fair hatch or eggs replaced at half price. He is also offering baby chicks at twenty cents each.

—With this issue Mrs. R. J. Hargleroad, Arapahoe, Neb., starts an advertisement in which she makes a great reduction in the price of eggs from her select Barred Rock flock. Mrs. Hargleroad has trap nested her hens for several years and today has one of the heaviest laying strains of the Barred Rocks to be found anywhere. Her entire flock run better than 200 eggs each per year. These rocks are also persistent prize winners and the prices of $1 per fifteen and $5 per hundred are distinctly bargain prices.

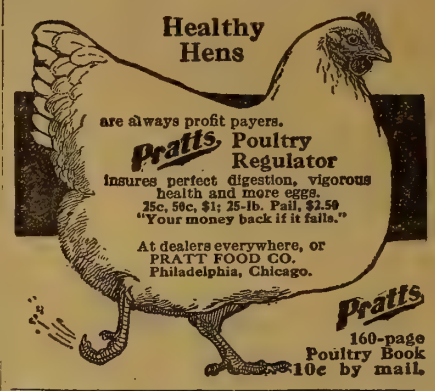
—M. V. Leeper, Redfield, Iowa, whose new advertisement offering Barred Plymouth Rock, Mammoth Bronze turkey and Indian Runner duck eggs for sale appears elsewhere in this department, writes: "After May 15th I will have only Pen No. 1 in special matings and will sell eggs two sittings for $3. Also eggs from farm range flock, thirty eggs for $1, $3 per hundred. Our eggs are practically all fertile this season. I have tested four incubators full, about 500 eggs, and they did not average over two clear eggs to the incubator."

An Ideal Orpington.

The accompanying engraving represents a White Orpington cockerel at the head of the yards of the Wonder strain of White Orpingtons owned by Frank Fortman, Dyersville, Iowa. Judges have pronounced this bird to

be one of the best living specimens of the breed. Mr. Fortman announces that from this date he will offer eggs for hatching at the rate of $2 for fifteen. These will be the run of ten different matings and will include as many eggs in each setting as is possible from the first pen headed by the above-mentioned cockerel. Special mating lists and other particulars may be had by writing to Frank Fortman, Box 23, Dyersville, Iowa.

—Rose Comb Rhode Island Red eggs from high-bred farm range stock are offered for sale by A. A. Worthington, Media, Ill., in his advertisement appearing elsewhere in this department.



LICE KILLER Liceci, strongest lice killing compound made. Works like magic. Simply put a few drops in nests and hang bottle in coop. Powerful evaporating vapors go into feathers, cracks and crevices. No painting, spraying or dusting. Easy to use. Circular free. Pound bottle prepaid 50c. Money back if it fails. Agents wanted. W. H. Metzger Co., No. 79, Quincy, Ill.

DOGS.

SCOTCH COLLIES

HOMESTEAD readers interested in the very best Collie should write us. Our stock is direct from the very best imported and of strains noted for their winnings and intelligence. Address A. A. Martin & Son, Route 4, Box 107, Lincoln, Nebraska.

SCOTCH Collies. Bright, intelligent workers. Airedale terriers for hunters, watch dogs and companions. Grown stock, puppies for sale at all times. Write for large list. W. R. Watson, Box 125, Oakland, Ia.

SCOTCH COLLIE PUPS for breeder and farmer. 1 litter sired by Imp. Billesley Brother, best collie ever sent to this country; pedigrees, eligible to register in the A. K. C. T. A. Gough, Bristow, Iowa.

GRAND S. & W. COLLIE Male puppies from natural heel drivers, S. & W. bred bitch. Instructions for training. Pairs not akin. Address E. J. Thomas, West McHenry, Illinois.

COLLIE PUPS Natural heelers, plenty grit, expert driving parents, pedigree; females, $5; males, $10. F. L. Reinhard & Son, Ottumwa, Ia.

FOR SALE SCOTCH COLLIE PUPS. All good ones. Address J. Ross Bachman, R. 3, Blakesburg, Iowa.

FOX TERRIER PUPPIES Also a few choice females, open or bred. Extra select stock. Address N. R. Rogers, Peru, Nebraska.

SCOTCH Collies—Bred females and young stock from imported and trained parents for sale. Also Airedale Terriers. Sunnyvale Kennels, Cumming, Ia.

TURKEYS

Mrs. J. E. Baxter, Walnut Grove, Minnesota
Will sell eggs from her Mammoth White Holland turkeys at $3.00 per ten. Write your wants.

M. B. TURKEYS, standard wt. and quality. 2 pens by 41-lb. old, 35-lb. young tom. Heavy boned. 10 eggs $4 and $3. Catalog. M. Henningsen, Dike, Ia.

EGGS AND TOMS—Large White Holland Turkeys
Mary Culver, R. 1, King City, Mo.

MAMMOTH BRONZE TURKEY EGGS
$2.50 per 11. Mrs. E. Millard, R. 3, Earlville, Iowa.

FOR SALE M. B. turkey eggs by express or parcel post, 30 cents each. Address F. J. Sexsmith, R. F. D. 2, Orient, Iowa.

GEESE.

WANTED. Eggs of Toulouse, Embden, G. African geese, Pekin ducks, B., W. Holland, Bourbon Red turkeys. State lowest price. Bx 613, Mankato, Minn.

S. S. HAMBURGS.

S. S. HAMBURG EGGS FOR HATCHING
Address H. C. SCHRAGE, BRISTOW, IOWA.

BELGIAN HARES.

BELGIAN HARES Easier raised than poultry, better meat, nice pets, very prolific. $1 to $10 each. Hawkeye Poultry Yards, Mt. Pleasant, Ia

HOUDANS.

HOUDAN EGGS from fine, large crested birds; 15 eggs $1.50; 30, $2.75; 50, $3.00; 100, $6.00. Satisfaction guaranteed. E. A. KAUFFMAN, Lockridge, Iowa.

CORNISH GAME.

EGGS "DARK CORNISH" EGGS
SETTINGS from 3 prize-winning pens. Range stock eggs by the hundred. Prices reasonable. Mrs. John E. Griffith, R. 9, Washington, Iowa.

LEGHORNS.

ROSE COMB BROWN LEGHORNS, large, vigorous stock, strictly pure bred, have true Leghorn type, from best strains of layers known to breed. Eggs high fertility, carefully packed, 15, $1; 50, $2.25; 100, $4. Write Geo. Boyce, R. 3, Newell, Ia.

SINGLE Comb Brown Leghorn eggs from 150 high scoring hens mated with large nicely marked cks. Heavy laying strain. A few choice cks., $10 ea. Eggs, $1 for 15, $2 for 50, $3.75 for 108. Satisfaction guaranteed. Address Edw. Dooley, Selma, Iowa.

TELLS WHY CHICKS DIE

J. C. Reefer, the poultry expert, of 1894 Main St., Kansas City, Mo., is giving away free a valuable book entitled "White Diarrhoea and How to Cure It." This wonderful book contains some new scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. Everyone interested in poultry should certainly write Mr. Reefer for one of these valuable FREE books.

LEGHORNS.

ROSE COMB BROWN LEGHORNS

EXCLUSIVELY. 15 YEARS WITH THIS VARIETY. Eggs, fresh and securely packed. Large flock of exceptional quality, having farm range. 15, $1; 50, $3; 100, $5; 200, $9. Pens, either cockerel or pullet matings, 15, $3; 30, $5; 50, $7.50. Address **R. R. STEWART, R. 2, Charles City, Iowa.**

Single Comb Brown Leghorns We will supply the egg trade this season from our flock of 500 vigorous, farm range birds, bred for vitality and heavy laying; 20 eggs $1.00; 50, $2.00; 100, $3.50; 200, $6.50. None but strictly fresh, nice shaped eggs shipped. Safe delivery and high fertility guaranteed. E. A. Kauffman, Lockridge, Iowa.

Rose Comb Brown Leghorns

EXCLUSIVELY, at Pike Timber Stock Farm. Eggs, single sitting of 15, $1.25; two or more sittings $1.00 each, 100 eggs $6.00; 200 for $9.00. Address **DAVENPORT & MACK, Belmond, Iowa.**

S. C. WHITE LEGHORNS Heavy layers. $1 for 15 eggs; $3 per 50; $5 per 100. Baby chicks, $12 per 100. S. C. Brown Leghorns. Silver cup winners. $1 per 15; $3 per 50; $5 per 100. Baby chicks, $12 per 100. Sterling Poultry Co., Box 10, Sterling Ill.

S. C. W. LEGHORNS

CHALK WHITE, six firsts at Des Moines, 1912. Eggs and baby chicks. Write your wants. **J. M. Williamson, R. 1, Des Moines, Iowa.**

NEWS OF THE SALE RING

The Omaha Association Angus Sale.

The sale of Aberdeen Angus bulls, held at Omaha, Neb., on April 29th under the auspices of the American Aberdeen Angus Association, was unusually well attended and this time they had a consignment that was a credit to the breed. It was an evenly balanced lot from beginning to end and was a credit to those men who consigned them to the sale. Sixty-two head were sold for $11,230, or an average of $181, and it is the best average for a strictly Angus bull sale of that number that has ever been held in the West. In the forenoon the association ribbons were awarded as follows: Bulls over eighteen months, No. 5, Sir Kildon 2d, consigned by C. D. & E. F. Caldwell, 1st; No. 6, Proud Prince C., same firm, 2d; No. 49, Baliric, J. S. Athen, 3d; No. 33, Queen's Eric Lad, Thos. Tyner & Sons, 4th; No. 48, Alcott, L. Goilinghorst, 5th, and No. 36, Heather's Lad M. 2d, N. M. Murphy, 6th. Bulls under eighteen months: No. 8, Barbara's Glen, C. D. & E. F. Caldwell, 1st; No. 1, Black Knight Eric, same firm, 2d; No. 13, Esmond Eric, M. A. Martin, 3d; No. 39, Minnie's Eric 2d, W. A. Holt, 4th; No. 63, Quiet Lad of Coon Creek, C. J. Hadley, 5th, and No. 19, Gay Windsor 5th, C. A. Martin, 6th. The top of the sale was Esmond Eric, consigned by M. A. Martin, Wall Lake, Iowa, and he went to Moore, Cannon & Bell, Silver Creek, Neb., at $350. The outcome of the sale was decidedly encouraging to the officers of the association and the Angus breeders in general and judging from the demand for bulls, the future looks particularly encouraging. Col. Igo did the selling assisted by Col. Judy in the ring, with Secretary Charles Gray as master of ceremonies. Below is a list of the entire offering:

Black Knight Eric, calved February, 1912; W. G. Tobin, Highland, Kan. $215
Eola's Black Lad, calved May, 1911; J. H. Smithson, Ellengsburg, Wash. 220

The Chicago Sale of Angus Bulls.

The sale of bulls at Chicago, May 1st, under the management of the American Aberdeen Angus Breeders' Association proved a very successful affair, and while prices did not rule as high as at Omaha two days previous, yet the fact that in the Chicago sale were a number of bulls too young to sell to good advantage was the reason for the average falling below the Omaha sale. As it was, sixty-seven bulls were sold at an average of $131, satisfactory figures to all concerned. At Omaha and Chicago together 130 bulls were sold for the excellent average of $155, denoting the stability of the cattle trade and the strong demand for Angus bulls. The Angus fraternity should feel much encouraged at the outcome of these sales. Coming at a time when the farmers are busy in the fields, the good attendance at both sales demonstrates very fully the demand that exists for bulls of this great beef breed, especially when one realizes that the majority of the bulls were not sold to breeders, but went to farmers for steer raising purposes. Secretary Charles Gray worked very hard to make these sales a success, and much credit is due to him for untiring efforts which were so largely responsible for the satisfactory outcome of the sales. The top of the Chicago sale was $400, paid by J. P. Cox, Boone, Iowa, for the yearling Trojan Erica, Earl of Botna, consigned by John S. Goodwin, Naperville, Ill. Blackcap King 5th, also consigned by Mr. Goodwin, went to L. W. Faeth, Fort Madison, Iowa, at $225, and the same price was paid by N. E. Franklin, Lexington, Ill., for the Blackbird bull BlackBotna, consigned by M. A. Judy, West Lebanon, Ind. The Blackbird bull Broadus Burnham 3d, consigned by Edwin A. Schwarm, Loogootee, Ill., was secured by C. W. Davis, Cedar Rapids, Iowa, at $280, and Frank Sherworth, Canton, Ill., paid $250 for the Trojan Erica Eric Manse, consigned by W. D. Merritt, Olin, Iowa. The association sales of last year and the ones the year before have clearly demonstrated that the plan is an excellent one for securing an outlet for the surplus bulls. The one thing that some breeders have yet to learn is that bulls must have the age and condition to sell satisfactorily. There was, however, a great improvement in the cattle consigned this year over those that were sent forward to the sales last year. The association sale method is fair alike to seller and buyer, giving the seller an outlet for his bulls at the minimum expense and offering buyers an opportunity to select from a larger number of bulls than they could otherwise find. Col. Silas Igo sold the cattle in his usual satisfactory manner, and the following is a list of all sales amounting to $100 or over:

Blackbird E. of Woodcote, calved 1912; Fred Yates, Watseka, Ill. .$145

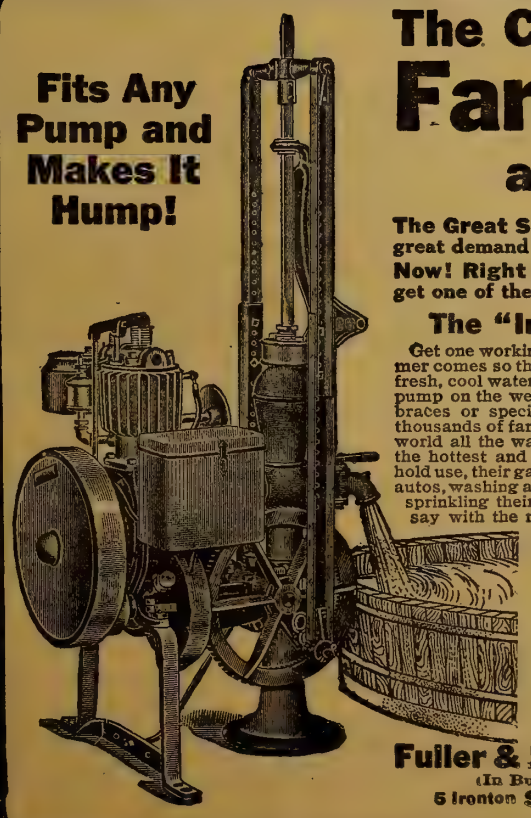
SOUTHEASTERN KANSAS IS the place to go for good homes, low prices and easy terms. Send for full information. Address The Allen County Investment Co., Iola, Kansas.

CENTRAL MISSOURI FARMS Write for descriptive price list of improved farms that will prove profitable and satisfactory as homes and investments. HAMILTON & CRENSHAW, Box 3, Fulton, Mo.

Fits Any Pump and Makes It Hump!



The Celebrated Fuller & Johnson Farm Pump Engine at the NEW LOW PRICE

The Great Success of the Farm Pump Engine the world over and the resulting great demand for it have enabled us to establish a new low-record price.

Now! Right Now!—is the time for you to take advantage of this opportunity to get one of these best of all pumping engines at a price so low it will surprise you.

The "Iron Hired Man"

Get one working on your well before the summer comes so that you may have plenty of clear, fresh, cool water. It sets right up close to the pump on the well platform, without any cleats, braces or special foundations. It has given thousands of farmers and ranchmen all over the world all the water they want for their stock, in the hottest and calmest days, for their household use, their garden, for washing their buggies, autos, washing and cooling off their porches and sprinkling their lawns. Get one and you will say with the rest, "It's the best and cheapest investment I've ever made."

270 to 2,450 Gallons Per Hour

It pumps constantly, day in and day out, for years to come, if you want it to. It is so simple and uses so little fuel that the cost is next to nothing. If you have a windmill you can attach it easily to the pump and use either the windmill or the pumper, but the pumper is always there ready to do the pumping at a moment's notice if for lack of wind, or any other reason, the mill doesn't work.

No Extras to Buy

This sturdy little engine comes complete, all in one crate, ready for immediate use. *No extras to buy.* It protects your home and buildings from fire. It runs the cream separator, washing machine, churn, grinder, or any other light machine.

Send tonight for big illustrated catalog. Get the new and reduced price on the celebrated Farm Pump Engine.

SHARPLES
MECHANICAL MILKER

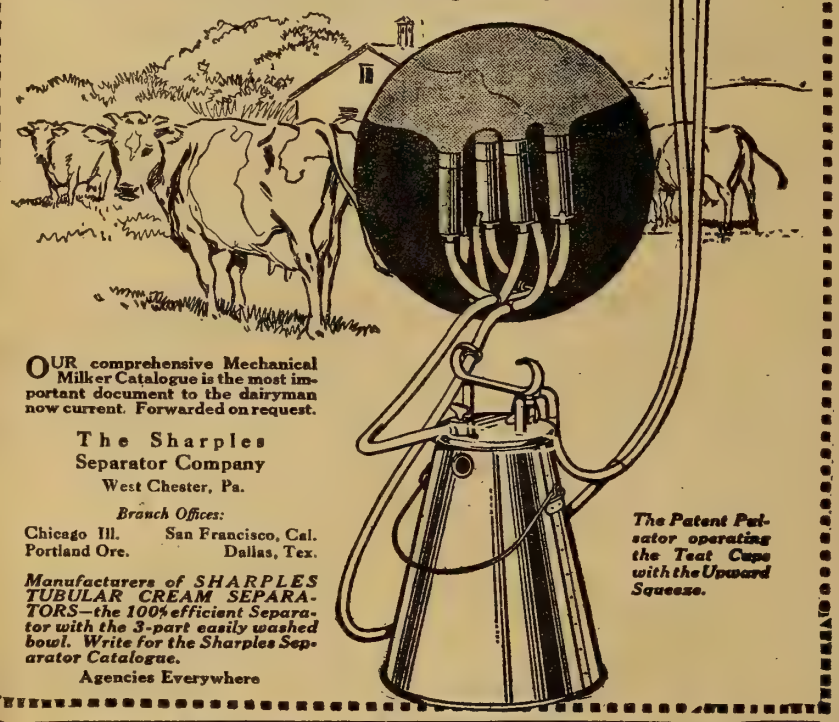
THIS equipment is revolutionizing modern dairy operation. During the four years since its perfection it has been installed with unqualified success in hundreds of the leading dairies throughout America and abroad.

The distinctive features of the SHARPLES MILKER, to which its complete success is due, are the Teat Cups with the Upward Squeeze and the Patent Pulsator operating them. This device reproduces nature's own method of milk extraction, which the most skillful hand-milking cannot do.

The cows are more contented. The teats and udder become far better conditioned. The milk product is absolutely uncontaminated—pure and more valuable. Labor cut to one third.

Sharples Mechanical Milking means the end of all drudgery of milking.

Practically every dairyman can visit installations of SHARPLES MILKERS within easy distance, where the actual operation of this equipment can be observed under conditions approximating his own. We shall be pleased to hear from dairymen with a view to their making such inspections.



OUR comprehensive Mechanical Milker Catalogue is the most important document to the dairyman now current. Forwarded on request.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

POINTERS ON RAISING THE DAIRY CALF.

In the proper raising of calves it is very much better for the mother and for the youngster that the two shall be separated very shortly after birth. In handling our herd, it is customary to leave the new-born calf with the mother for about twenty-four hours. The new milk of the mother is a very important factor in the beginning of the life of the small calf, and consequently men who are having decided success with dairy cows, as a rule, leave the calf with the mother as stated above. At the end of the first day, the calf should be removed to a clean, bright pen where, if possible, it is out of sight and hearing of the mother. By this method the calf is soon forgotten, and the next problem that arises is the raising of the calf by hand.

One of the serious difficulties that men encounter in raising the calf is teaching it to drink. Apparently each new-born calf is born with an instinct to butt, and we have all seen the feeder, after a struggle with the calf, come from the pen with the milk spilled and his person pretty much bespattered. We have found it a simple matter to back the calf into a corner, then by placing the left hand over the bridge of the nose and forcing the fingers and thumb into the calf's mouth to force it open. By scooping up a little milk with the other free hand it may easily be poured into the calf's mouth. It will only be necessary to do this three or four times until the calf begins to swallow and drink very nicely.

A point of great importance in raising the calf is to feed it regularly. We have known men who, in raising the calves, will feed them at a certain time in the morning, and then at any time it may be convenient in the evening. There should be a definite time as nearly as possible for the feeding of the calf. On most farms the usual practice is to feed in the morning and at night, and those two feeding periods should be as regular as possible.

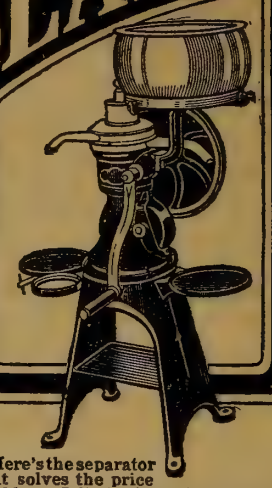
Our plan is to feed the young calf with whole milk for from four to six weeks. This will depend somewhat upon the growth of the calf and also upon its general codition, but when the time comes to change to skim milk, we are very careful not to do this abruptly. In fact, our plan is to take one week to change from whole milk to skim. One should begin by placing a very small quantity of skim milk with the whole milk, and gradually increase this until the calf is receiving the whole mess of skim milk. This is the critical time during the life of a calf, and it is very frequently at this time disorders may arise that may cause serious trouble. However, if the feeding is carried out carefully, and if the skim milk is also warmed to body heat for feeding, there need be no fear with regard to troubles that may arise.

In the winter the calf should be kept in a warm, clean pen, and if possible, should be also fastened at the time of feeding, so that a little ground oats may be fed immediately after milk. Thus the calf's mouth is dried up and there is no tendency to that objectionable feature of one calf sucking the other's ears, etc. In winter, care should be taken to keep the calves from any drafts and as far as possible they should be kept warm and sheltered during the time of any storm.

During the summer a greater latitude may be given to the calf, and if convenient it is a good plan to let it have the run of a small pasture where it may receive its milk conveniently, and also where it may roam at will. In all cases, shelter should be provided both from the sun and from any rain storms that may come. If there are clumps of willow or brush of any kind, it also adds to the comfort of the calf, particularly if flies are very bad.

It is a splendid idea in the raising of stock upon the farm to handle the calves frequently. It may seem foolish for one to spend considerable time in the petting and handling of calves,

BEATRICE CREAM SEPARATORS



Here's the separator that solves the price problem. Sells for $25 to $40 less than other standard machines. The connecting link between separator efficiency and reasonable price.

Another point: Our patented device cleans the machine *in less than 2 minutes.* Will save you time—will save you money—will save you cream. Skims close and clean. Easy to run—hard to wear out. Second to none.

Sold by dealers. Ask them or write us for free booklets and full particulars. Address nearest office below.

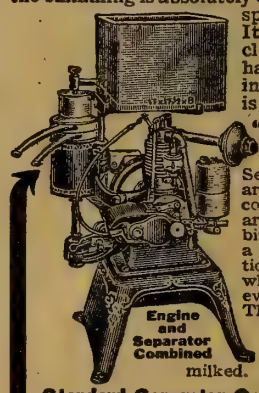
BEATRICE CREAMERY CO.

Chicago Lincoln, Neb. Des Moines, Ia. Dubuque, Ia.

Save $25 to $40.

No Butter Fat Lost
When You Use
"The 1913 ... " Cream
Automatic Separator

It skims faster than ten men can milk. And the skimming is absolutely even, because the speed is uniform. It therefore skims closer than any hand power machine. No butter fat is lost.



Engine and Separator Combined

"AUTOMATIC" Cream Separators

Self-powered. Separator and engine a compact unit. They are so solidly combined that there isn't a chance for vibration of the bowl which spins at high, even speed for hours. The "AUTOMATIC" is almost a necessity where eight cows or more are milked. Write for cat. 7.

KALAMAZOO TANK & SILO CO.
Kalamazoo, Mich. Kansas C'y, Mo. Minneapolis, Minn. Ft. Worth, Tex.

but right here is where many stock men make a serious mistake. They let the calves run almost wild until they are fully grown, and then comes the very great difficulty of controlling the animals sufficiently to get them into the barns or in "breaking them" later on at the time of freshening. All calves should be handled frequently, and while doing this the farmer should realize thoroughly that the future cow is in the process of making, because her temperament later on will very materially depend upon the fondling and handling that the animal has received as a calf and yearling. Besides, there is the intense satisfaction of having a very much quieter cow and an animal that will be very much gentler as a mother and milker.

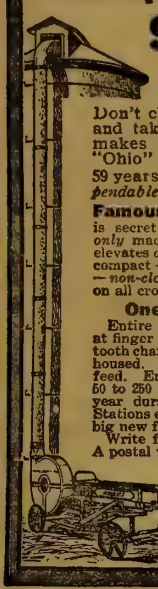
We have already mentioned that a very critical time in the calf's life is when the young animal is being changed from the whole to skim milk. There is frequently a trouble that arises at this time known to dairymen as scours. This is a malady that is very serious to young calves, and is one that needs to be avoided if possible. As a corrective, we have found that lime water placed in the skim milk is very effective. If a small quantity of lime is taken and slacked with water and allowed to stand until the clear water forms on top, this clear water may be skimmed off, and a teaspoonful of this placed in the skim milk has a very desirable effect. Of course, there is another thing that needs to be watched very carefully, particularly where a number of calves are kept together in a pen, and that is the appearance of lice. There is nothing that will hinder the growth and development of a calf so much as the presence of lice in large numbers upon the body. There is one simple remedy that will prove very effective. By taking a small bar of soap and dissolving some in a pail of water, and then by placing this in about a pint of kerosene, an emulsion may be made that, when rubbed well into the calf's hide, will act very promptly in the destruction of lice. There are other remedies that may be applied, such as Zenoleum and Creso, which are very good.—[Prof. W. J. Elliott in Canadian Farm.

HOW I INCREASED MY DAIRY PROFITS BY FEEDING.

We dairymen realized years ago that there were good cows born and good cows made, and, as I am a practical man, I believe that there are more poor cows made out of good cows born, by insufficient feeding than in any other way. In other words, I believe that many dairymen have cows today that they have unnecessarily condemned because the fault was with them, in not judiciously feeding and caring for those cows. The majority of us are in the dairy business for the dollars and cents that are in it, and those of us who are in it for that reason recognize two distinct propositions that we must ever hold before us if we are successful in our business. One is to feed them so that they will produce well, and the other is to feed them so that their production shall not be too expensive. Incidentally other things contribute to these, whether the feed which we give them is expensive to us or whether we by our own efforts produce it upon our farms at the least possible expense. But these are the two main propositions. Are we feeding our cows so as to produce the greatest number of pounds of milk or butter from them, and does that greatest number of pounds cost us as little as it is possible for them to cost us?

We have proven by experience that we must know the individual animal; that it is only by feeding for the individual cow, whether you have one cow or twenty-five cows, that you can gain the most success. With cows of the same size, standing side by side, as near alike as outward conditions could possibly make them, we may vary the feeding and obtain the best results. And the only way to know what these results are is to go right back to the teachings that have been presented. We must use the same business principles with the cow that every other business man uses in his business—know what we feed her, what it costs and what she produces. By using these business principles we are enabled from day to day to obtain the best results. This means much. It means that the average dairyman, when he changes in his barn, from one kind of hay to another, must change the grain or whatever else he is feeding that cow, to make her produce the most at the least expense; that we must not change too hastily from one to the other. When we change from silage to dry feed we must be a little careful, and when we change to silage we must be a little careful, to keep that cow in the best condition. We must use common sense and never subject her to any sudden change that will throw her system out of balance, for it is too delicately adjusted to conform to sudden changes. It is astonishing to note what a difference even a thunder shower coming up in the afternoon will make in the amount of milk

"Ohio" 1913 Model
The Improved Logical
Silo Filler



"Ohio" improvements for 1913 are radical—eclipse all previous efforts.

Don't close a deal for *any* Cutter and take chances with unknown makes until you see what the "Ohio" offers.

59 years' experience—*absolutely dependable quality.*

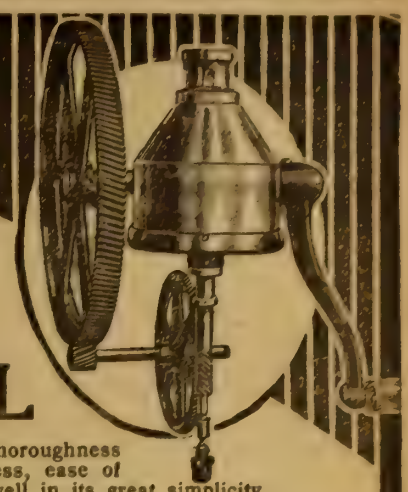
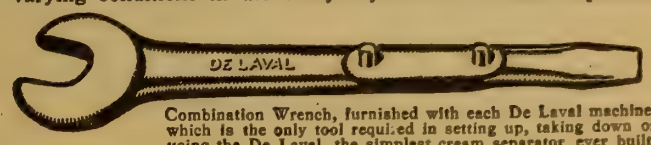
The Simplest CREAM SEPARATOR Ever Built — DE LAVAL



EXCELS ALL OTHERS not only in thoroughness of separation, sanitary cleanliness, ease of running and durability, but as well in its great simplicity.

THERE IS NOTHING ABOUT THE OPERATION, CLEANING, adjustment or repair of a modern De Laval Cream Separator which requires expert knowledge or special tools.

NOR ARE THERE ANY PARTS WHICH REQUIRE FREQUENT adjustment in order to maintain good running or to conform to varying conditions in the every-day use of a cream separator.



Combination Wrench, furnished with each De Laval machine, which is the only tool required in setting up, taking down or using the De Laval, the simplest cream separator ever built.

THERE IS NOTHING ABOUT THE MACHINE THAT CANNOT be taken apart, removed or replaced by any one who can use a wrench or screw driver. In fact, the only tool which is needed in the use or the operation of a De Laval Cream Separator is the combination wrench and screw driver illustrated above, which is furnished free with every machine. Visit the local De Laval agent and see for yourself its simplicity of construction.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

Clear Fir Silo at 40% to 60% Saving

Buy your silo of us, and you buy *direct,* not only from the *maker* but from the *lumber producer* as well.

We own forests, railroads and six big mills

There are thousands of acres of timber in our tracts. The fir is the finest in the land. Tall, straight and close of grain. Only the choicest goes into Seattle Silo Staves. They show no knots, sap or other defects. Do not warp, shrink or swell. The toughest, best wearing wood in existence. All the cutting, logging and manufacturing of this timber is handled by us. One continuous operation. One overhead expense. Hence the big saving that we effect in producing cost—and why we save you 40% to 60% on a silo of better quality. Mail the coupon for catalog.

Seattle Silos
have patented swinging doors

These are far the best silo doors ever devised.

Quick detachable with special iron cross-bar or hoop connection. The steel bars on the door provide a solid ladder from which hoops can be tightened—the result of a new invention. They close absolutely air-tight. Cannot stick or bind—never have to be lifted. They swing in or out readily on their hinges.

When silos are ordered without additional lumber to make full cars, we can usually arrange to ship with other cars to nearby points.

To one farmer in every township we offer the chance to get a silo, at a great saving, by helping get together a carload order.

Mail the coupon today.

Save 40% to 60%
on Lumber and Millwork

Five middlemen come between the mill and you when you buy of your local lumber dealer. All get a fat profit; no wonder lumber is high. We put an end to this hold-up game. Sell you direct. Give you better materials at our mill price. Save you 40% to 60%.

We make shipments within 24 to 48 hours after receiving orders. Our shipments get to destination within an average of two weeks. Write today for price list. Better still, send your list of materials for our prepaid prices. Money back unless satisfied. Mail coupon today.

HEWITT-LEA-FUNCK CO.,

HOLSTEIN CATTLE.

Pure-bred Registered
HOLSTEIN CATTLE

What dairyman is buying more land or putting up better buildings or placing money in the bank out of profits from scrub cattle?

You must have the best dairy blood in order to make a success out of dairying today. You must have good cows, cows that yield heavily enough to compensate for the high price of feed.

Pure-bred Holsteins fill this requirement. They are the most economical producers of milk and butter. They are large, healthy and easy to care for. They are the cattle for the man who plays the game to win.

Send for Free, Illustrated, Descriptive Booklets.

be sought is profit and, therefore, no unnecessary outlay need be made. It is best to have the house divided into separate pens, the least size of which should be thirty feet square for each calf. Double pens to hold two calves are objectionable for many reasons. It is important for the health of young stock that there should be plenty of light and fresh air in the pens provided for them and the partitions should be made of lathe so as to offer no impediment to perfect ventilation. The pens may be provided with feed and drinking troughs, or pails may be used. The latter are preferable, especially when the calves are young and are fed upon sweet milk, but it is always advisable to have the feeding utensils clean. Calves are very sensitive to the evil influences of food that has been allowed to ferment and sour, and though they may thrive upon sour milk, yet a high acidity is almost certain to produce bowel trouble and sickness. A small box in which a quantity of powdered chalk, or charcoal, to which has been added a bit of salt, which the calves may lick occasionally, would be a useful addition to the furniture of the pens. The front of the pens should be of open work similar to that of the sides. Calves that have been well sheltered and fed the previous winter will show the result of good treatment, and will be in good condition already when turned upon green pasture.

Johnson Co., Ill. J. T. McCoy.

The estimated production of cotton from the world's crop of 1912 is put at twenty million four hundred and two thousand bales of five hundred pounds each. To manufacture this quantity of goods required the operation of one hundred and forty million nine hundred and ninety-six thousand spindles. Last year's production of cotton in the United States was put at fourteen and one-half million bales. With the exception of a very small quantity this came from the states of Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee and Texas. The latter leads with a production of just a little less than four million bales.

Ask your neighbor to subscribe for The Homestead.

CARE OF CALVES.

To the Editor of The Homestead:

Just now when the warmth of the spring sun adds to the distressed appearance of last year's calves that have been wintered in a cold shed, or in a partly sheltered yard, their poor condition is made relatively worse by the sleeker state of the cows, which have had all the good treatment that could be afforded them. The proper care of young stock is sometimes neglected, and this neglect is more frequent and conspicuous in the case of calves than any other stock kept upon the farm. These young animals are those by which the dairy is, by and by, to be replenished

It is a mistaken idea that exposure to cold hardens the constitution of a young animal and by half starving a calf the good milking qualities of the future cow are materially lessened. The production of milk is a heavy drain upon the system of the cow, and a sound constitution, perfect digestion and vigorous health are needed to sustain it. Exposure and spare feeding of the heifer calves through the winter months do not tend toward these conditions. It will pay to treat a common calf well, as it will pay to treat a pure-blooded calf of any of the choice breeds well, and it is very important that the former secure equally as good care as the more costly and fortunate animals.

Few farms have a well-appointed calf house, but we are sure that nothing upon the farm pays a better profit on its cost than such a house. A good, comfortable house to accommodate twenty calves may be put up for one hundred dollars and upwards, according to its style or finish. The cheapest, if it is only substantial, is as useful as the most costly. The object to which the cow will give at night. It astonished us many times to find when a cold, windy day would come that many of our cows had fallen off one or two pounds on account of the sudden change in temperature. We dairymen who have been through a winter when the cows had to drink under different conditions from what they are accustomed to, know how it curtails our business. Four years ago I was obliged to drive my cows half a mile, through December, to give them water. They had never stepped on the snow before, and it made a difference of over $60 in the product of those cows for thirty days. These things show conclusively that only by individual attention, only by thorough knowledge of their wants and supplying those wants in the minutest detail, are we able to obtain the best results. Therefore the feeding is something that requires attention each day, and twice or three times a day, as our rule may be. It goes without saying that there is no part of our work which is of such vital importance as the feeding proposition. To my mind it has reduced itself to this: Raise everything that you can on your own farm for the cows, store it in the most palatable condition possible, and when you are feeding what you raised on your own farm purchase only that which is necessary to furnish the cow with the amount of protein she shows that she requires by the scales on which the milk is weighed.—[W. G. Hunston, in Fayette County, Iowa, Bulletin.

The above is a picture of the 1,027-pound Poland China boar, Chief Price Again II, now at the head of the Wigstone Bros.' herd, Stanton, Iowa. He was third-prize boar at the Iowa State Fair. See field notes.

The Kansas City Hereford Sale.

The sale of Hereford cattle held at Kansas City, Mo., on May 6th, was well attended, but the lack of support from range buyers was apparent from the start and it was not possible to sell the entire number of cattle listed in one afternoon. As a result the sale was continued until the afternoon of the 7th, but most of the buyers the day before had bought what they wanted and gone and the second day's selling was low. As is shown by the sale list buyers were for the most part corn-belt farmers who wanted good, useful bulls for steer raising, and on the better lots bidding was good. The thin and poorly conditioned sort were not wanted. Females out sold the bulls by about $40 per head which is a favorable sign of good times in the cattle business. The top of the sale was $500, at which price E. W. Wood, Clements, Kan., took the five-year-old cow, Miss You, consigned by the Kansas Agricultural College. The following breeders were contributors to the sale which was managed by R. T. Thornton, Kansas City, Mo.: Gudgell & Simpson, Independence, Mo.; Z. T Kinsell, Mt. Ayr, Iowa; E. E. Wall & Son, Leeton, Mo.; Samuel Drybread, Elk City, Kan.; John Schmitt, Tipton, Kan.; O. S. Gibbons & Son, Atlantic, Iowa; Mousel Bros., Cambridge, Neb.; Kansas Agricultural College, Manhattan, Kan.; J. I. McGinnis, Moulton, Iowa; E. D. Gorman, Lineville, Iowa; R. M. Fields & Son, Lees Summit, Mo.; E. W. Elliott, Montezuma, Iowa, and Ed Walton, Bowen, Ill. Cols. Reppert, Zaun and Drybread were the auctioneers. The sale is as follows:

IOWA BOYS ON THEIR METTLE.

The opportunity to compete in a prize essay contest with the prize a free trip to the Iowa State Fair is being taken advantage of by many ambitious farm boys all over the state. The success of the boys' camp last year has served to stimulate interest and confidence this year, not only among the boys but with the teachers and parents as well.

The contest is limited to Iowa farm boys between the ages of fifteen and nineteen years who are actually engaged in farm work. Those who won the free trip to the fair last year are not eligible to compete this year. In most of the counties the county superintendent of schools, the secretary of the county fair and the secretary of the farmers' institute make up the local committee with the county superintendent as chairman. Where these cannot serve others are appointed. The chairman is provided with circulars so that in every county the boys who wish to contest can obtain all of the information by securing one of these circulars from their county chairman who in most of the counties of the state is the county superintendent of schools. If unable to get in touch with the county chairman the information regarding the contest can be obtained by addressing A. R. Corey, secretary of the Iowa Department of Agriculture, Des Moines, Iowa.

The subject for the essay is "Farming in Iowa as an Occupation; Its Possibilities as Compared to Other Vocations." All applications must be in the hands of the chairman of the county committee in the county in which the applicant resides on or before June 10th. The essays should not be less than 500 or more than 700 words and should be in the hands of the local committee not later than June 30th.

Letters received in the office of the Department of Agriculture last year told of some of the boys thinking their essays out as they were plowing in the fields during the day and writing their compositions in the evening after the days' work was done. Scores of splendid essays were written, the judges often finding it hard to choose between them.

The camp will be under the direction of Fred Hansen, of the state Y. M. C. A., again this year. He has had much experience in conducting boys' camps. He will be assisted by competent adult leaders from the Y. M. C. A. The plans somewhat similar to that of a military camp. Last year a regular schedule was followed out each day. This not only made it possible to maintain the best of discipline and organization, but also conserved the boys' time and energy, so that they were able to get the most out of it. Short assemblies were held each morning just after breakfast and brief addresses were given either on agriculture or character making, integrity, etc. Groups from the camp went out daily under the supervision of men from the Ames Extension Department to inspect the exhibits. Much the same plan will be followed this year.

Mr. Hansen is a great believer in the fellowship, good time and friendship which a camp like this can promote. On this phase of the state fair camp he says:

The fellowship, good time and friendship which camp life like this can promote is not an unimportant part of such a venture. We tried through a daily camp newspaper, through games and through emphasis upon getting acquainted with each other to make these features a part of the camp. I think that, judging by what the boys said when they went home and from many letters which I have received since, they not only learned a lot of things, but that the friendship and fellowship and the good time which they had will forever be a part of their lives.

Boys who wish to enter the contest should write to their county superintendent for circulars explaining the contest and for entry blanks or to A. R. Corey, Iowa Department of Agriculture.

E. W. Howe, of Atchison, Kansas, who is globe trotting again, writes from Melbourne: "In the wash room of the sleeping car, early this morning, I met an American, a Boston man, who has been a gentleman farmer in Australia for twelve years. He told me he owned fifty-two thousand acres of land, and that, whereas he came here with nothing twelve years ago, he would not take $1,500,000 for what he owns now. He originally visited the country on business, thought he detected great possibilities, and came here to live. He didn't know corn from barley when he began, but applied business rules to farming, and has succeeded. I expressed surprise as to his large holding, whereupon he told me that in the interior there are sheep farms five hundred miles square, or as big as the state of Kansas. This land is leased from the government at a penny an acre. Artesian wells three thousand feet deep are being bored, and these wells are greatly benefiting the arid districts."

Give the boy an acre of good ground this season, and let him "spread" himself trying to produce a big crop of corn. Let him have all he can raise on that acre, and even if he doesn't take some prizes in the boys' corn-growing contests or at some fair or farmers' institute, his heavy yield will encourage him in the production of corn, thus linking him closer to the farm.

The World's Greatest Power Washer

Direct from Our Factory to You. No jobbers' or dealers' profit to pay. It will cost you only a little more than half of what inferior machines cost. The NEWTON POWER WASHER, with reversible five-year guaranteed wringer complete, shortens the hours of wash days to minutes. Dirtiest clothes washed in six to fifteen minutes. Saves time, labor and money. Save $3.50 to $25 depending on the kind of machine you buy. The Newton Washer is made for either hand power, gasoline engine or electric motor. Get Our Free Circular Showing Styles. Try it in your home for thirty days, you to be sole judge. If the machine is not satisfactory, ship it back to us and we will pay the freight both ways and give your money back with six per cent interest. A postal from you will bring quick proof to you of our reliability and our free circular.

IOWA WEATHER AND CROP BULLETIN.

The following climate and crop bulletin is issued by the Iowa Weather and Crop service from the central station at Des Moines, for the week ending May 11, 1913:

The past week was cold, and over the southern and eastern counties unusually wet. Showers were general on Thursday and Friday, and in many localities on Monday. The average temperature was about 4 degrees below the normal, and light frost occured in many sections on two or three mornings, but no material damage was done to fruit, which is still in good condition. Where the rainfall was not too heavy rapid progress was made in preparing ground for corn, and considerable corn was planted especially in the northwestern counties. Corn planting will be general during the coming week. The rains were beneficial to small grain, grass and potatoes, and in the eastern counties, where the soil had been dry, it put the ground in good condition for plowing. Most of the live stock is now in pasture.

The following report by the secretary of the Iowa State Horticultural Society shows the average condition of fruit on May 1st: Apples, 93 per cent; pears, 90; American plums, 90; domestic plums, 75; Japanese plums, 80; cherries, 89; peaches, 79; red raspberries, 77; black raspberries, 88; blackberries, 89; currants, 94; gooseberries, 90; strawberries, 84 per cent of a full crop. The average for all crops is 85.5 per cent, the highest since 1901 when it was 4.5 per cent higher.

A SQUARE DEAL FOR THE WORK HORSE.

Are you anxiously waiting to get that colt onto the plow? Somehow there is a fascination about breaking a colt and we are all anxious to try them out. I wonder how many of us really know how to handle a colt. Our first few attempts at "breaking" colts make or ruin them. There should not be such a thing as "breaking" a colt. We should train him. When we once gain his confidence he is easily brought to understand what we want of him. They may be just a trifle awkward at first, so just be easy and have patience with them. These colts should have been worked lightly all winter to have them accustomed to the harness and ways of handling before putting them at heavy work.

Even though they are big, husky fellows they can't stand the heavy work that a mature horse can do. Do not make the mistake of ruining a fine horse by heavy work the first season, and above all things take care of his shoulders, for the marks of sore shoulders will stay with him for some time, and a little care will prevent it.

Always be sure to see that the traces are hooked evenly, that there will be no side draft. Always be sure that the horse obeys you, for if he does not heed the "whoa" and "back" he can never be relied upon. A great many runaways are prevented because the horse knows the meaning of "whoa" and "back."

If a horse of any kind has been compelled to rustle he will be in no fit condition for the heavy spring rush of work.

Another important feature not to be neglected is the fitting of the horse's collar. Take him to your harness man and have him fitted properly and use that collar for no other horse but the one it was fitted on. After the collar has been fitted, thoroughly soak the outside of it and it will adjust itself to the shape of the horse's neck. The collar of a working horse should be thoroughly cleaned each time it is removed from the horse. Never buy a cheap collar. It doesn't pay.

Some prefer to let their horses run out at night to grass while doing the spring work, but for my part I prefer feeding them dry feed. I find they can stand the work much better. It will do no harm to turn them out in a dry lot for the night with a little hay in a rack.

A work horse can have as much hay as he will eat at the evening feed, but so many make the mistake of feeding too much hay at the morning and noon feed.

My policy, and I think a very good one, is to feed one pound of grain to every 100 pounds of horse; thus if a horse weighs 1,200 pounds give him twelve pounds of grain and a trifle more of hay. A hay-stuffed horse cannot perform good work. Above all things give your faithful beast a good rest at noon. You had much better arise a little earlier in the day, than to cheat the horse from his noon rest. Do not rush him from one end of the field to the other then stopping for a half hour's rest occasionally. Let him have reasonable time with a little rest at the end of each round, and you will accomplish much more. It is not a good idea to allow the same horse to follow the furrow, change them around occasionally. If you are obliged to work old horses you will find they will keep up in flesh much better if you feed them ground grain, a mixture of ground oats and corn. Always water the horse before feeding and feed the same amount of grain at all times and you will have little or no trouble with colicky horses.

Nebraska L. Gardner.

Central Illinois farmers indorse the bill introduced in the Illinois legislature by Rep, W. B. Elliott, of the Knox county district, providing that quail be protected for five years. The Knox County Boys' Club petitioned Representative Elliott to introduce the bill. The farmers assert that the quail are invaluable to agriculture in their destruction of insect pests and that adoption of a law providing for a closed season of five years will give the birds an opportunity to increase and multiply. Many hunters will take exception to the proposition. The quail season is brief, and but a small proportion of the birds are killed each fall. It is believed that the protection of the quail, as proposed, will greatly curtail the demand for hunting licenses. It is further argued that the five-year protection for prairie chickens had small effect in relation to their increase. Sportsmen will argue that the prairie chicken case will likely have a parallel in the suggestion protection for quail.

HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

THE STRAWBERRY FALSE WORM.

A subscriber sends the following communication:

Last spring a little green worm about a half inch long and perhaps a little thicker than a wire shingle nail got in our strawberry patch and ate the leaves. We had them by the thousand and I want to know what and when to spray to keep them away this year.

This pest is very destructive when once it gets a foothold and it follows that old berry beds suffer especially. The principle of spraying is that any leaf-eating insect must have a poison administered. We have found nothing better than Paris green for this worm. Of course, this can only be used very early in the spring, as it would be dangerous to use it after the berries are formed, for there might not be rains enough to wash it away before picking and marketing.

Burning over the beds in early spring is a method sometimes advised. And if there is a good crop of rubbish it certainly will destroy immense numbers of the eggs. But the burning must be done with discretion in order that no harm be done to the plants. It should be done with a high wind, so as to make a surface burn, and not a deep burn. It will now perhaps be too late for you to burn this spring, for that must be done before strong growth begins.

Probably the best course for you to take now is the poison route as indicated above. But to guard against future trouble, and to secure fruit and have no trouble with this enemy, take the plan usually followed by experienced strawberry men. Plant a new bed this spring at some distance from the old bed. And as soon as you are done picking fruit from the old patch, plow it down. This will destroy the worms, and you will not have enough to bother upon the new bed for two years. It is well and we strongly advise you to go over the new beds and hand pick and destroy all the worms you can find. Should there be some you will forestall the next worm crop and save a vast amount of labor and loss in the coming years. And this hand picking is not very laborious when there is but one plant to the hill.

ASPARAGUS AND RHUBARB FROM SEED.

To the Editor of The Homestead:

The reason that I have thus mentioned these two garden plants in this connection is that they are usually propagated from roots bought from the seedsman or secured from a neighbor's garden. There are several advantages in propagating from seed. In the first place you may more readily get the desired variety since one is not likely to be able to get roots from more than one or two standard kinds of either pieplant or asparagus. If a hundred or more of the roots are needed, the cost will be considerable, and results are not always more sure or quickly realized with roots.

Asparagus or rhubarb seed may be sown in the spring in an outdoor bed or in a window box, and the young plants transplanted where they will have more room, later on as the weather becomes warm.

Asparagus may also be sown in rows where it is to stand. In this case lay off rows three feet apart, and make the soil very fertile. Sow the seed thinly and in quantity sufficient to insure a plant every foot. The seed are very slow to come up, and in most instances it will be fifteen to twenty days before all are through. Give them clean culture throughout the summer, thinning so as to stand a foot apart in the row. Asparagus is a gross feeder, and the ground should be top dressed with a coating of rich manure, preferably from the hog pen. Compost which contains ashes is also an ideal fertilizer. When the seed are thus sown where the plants are to stand, there will be some more labor the first year, but the results will be more satisfactory. You will have larger and thriftier plants, with a fair crop the next spring.

If the plants are grown in a seed bed and later transplanted to the row,

Are You Paying This Bill?

Nearly every soil contains enough plant food for many hundred years; yet those who add plant food to the soil get larger crops than those who do not.

WHY?

Because there is only a small part of the soil plant food available. It can support only a small crop. A larger crop requires a large amount of plant food. It cannot get enough from the soil's natural supply, and those who supply it in available ready-to-use form reap the benefit. The amount required is small, but it is as necessary as the twelfth inch in the foot. If the crop has to wait for its plant food **remember, it waits at your expense.**—To avoid this,

LET THE
EMPIRE FERTILIZERS
DO IT

These fertilizers supply to growing crops in available form the plant food elements required which in connection with good seed, cultivation and weather, and the plant food supplied by the soil and air, are producing good crops of profitable size and quality. Farmers depend upon them as upon other old friends, and have done so for years.

Agents wanted where we have none. Address early for prices and terms,

EMPIRE CARBON WORKS
429 Locust Street, St. Louis, Mo.

A New "Quick-Hitch" Harness From Sears, Roebuck and Co.

DESCRIPTION

Breast collar style. Bridle, 5/8-inch, overcheck or round side reins. Lines, 7/8-inch fronts, 1 1/8-inch hand parts. Breast collar 2¾ inches wide, V shaped. Traces, 1¼-inch. Gig saddle, harness leather skirts, flexible tree, 1-inch bearers, 1-inch wrap straps. Breeching, 1 5/8-inch harness leather body, 7/8-inch split hip straps, 7/8-inch side straps, 7/8-inch turnback, crupper to buckle on.

No. 101J3581 With nickel buckles, solid nickel hook and terrets..... $16.95

Enables you to hitch or unhitch in less time than it now takes to place the shafts in the loops. Only **one** place on each side to hitch, instead of three or four.

All parts of the harness are securely united, they all work together and there is no jerking, which means less strain on the parts.

Either tug, when hitched, unites two complete circuits of harness, one for draft, one for holding back, and makes certain the movement of the vehicle, forward or backward, as the horse moves. This avoids accidents caused by failing to unhitch one or more of the straps in old style harness.

Works automatically in hitching and is just as quickly unhitched by pressure of thumb.

Women and boys—and busy men, will appreciate this new "Quick-Hitch" Harness. Our **low prices** tell the best story of **big values.**

Send for Our Big Harness Catalog

Contains over seventy pages of bargains in fine Harness, Saddles, Bridles, Collars, Whips, Pads, Trimmings, Blankets, Etc. Should be in the hands of every horse owner. Write postal now. Please ask for Harness Catalog No. 65147

"I've Used My Adriance Mower for Over 40 Years—It's in Excellent Condition Today"

Hundreds of farmers who bought **Adriance Mowers** forty to fifty years ago are still using the same machines, with excellent results.

Could you find any more convincing evidence of superior construction?

From the ground up, every piece of material entering into the construction of the **Adriance** is most carefully selected and is the best that money and skill can produce.

It is very simple in construction. The main frame is a single piece—wonderfully strong and rigid, insuring perfect alignment of shafts and mesh of gears. It is the easiest to handle. The levers are handy and easily operated from a comfortable position in seat. One easy forward acting foot lever in front of the driver does the work with natural movement of the leg.

It is the lightest draft Mower on the market. The patented **Adriance** Spring Draft Device lightens the draft and completely overcomes shock or any danger to the driver, team or mower should any obstruction be struck.

Built for one or two horses—3½ to 6-ft. cut.

ADRIANCE MOWERS GIVE THE BEST SERVICE FOR THE LONGEST TIME AT THE LEAST EXPENSE

BUG DEATH

Kills all bugs and worms that eat the leaves of any plant or vine: also prevents blight.

CONTAINS NO ARSENICAL POISON AND WILL NOT INJURE THE FOLIAGE.

Give it a trial this year.

If your local merchant does not sell it, write us. Our booklet, Crop Insurance, mailed free.

Danforth Chemical Co., Leominster, Mass.

the preparation of the ground will be different. In this case the plants will remain in the seedbed standing eight or ten inches apart, and receiving careful cultivation through the season. In the South these plants will be ready to transplant to the row in the fall, but farther north it is well to wait till the next spring. Prepare the ground by furrowing out deep, making a trench say a foot deep. Asparagus has enormous roots, and will need plenty of room. In digging them up be careful to get all the root possible, and set them in the bottom of the trench; fill the dirt about them and pack well. Do not fill the trench entirely, but as the plants are cultivated work the dirt around them till the ground is level. Thus the crowns are several inches under the ground. These year-old crowns are superior to any you can buy, and you run no risk, since they are transplanted without becoming dry, something very important with asparagus.

Rhubarb plants are grown much in the same way as asparagus, except they are not to be set in a deep trench, but with the crown level with the surface. This distance to set them will be about a foot, and if in rows they should be three feet or more apart. For the larger kinds, a foot will not be far enough apart, some of the bunches being two feet across. Rhubarb should never be planted where it is to stand, but grown in a bed and transplanted to the row the next spring, very early.

H. F. Grinsted.

FAVORS STALLION LAW.

To the Editor of The Homestead:

As I glance over the pages of The Homestead and many other farm and stock papers, and see the criticism of the new stallion and jack law I feel like "butting in," as I have made the horse business a study for thirty years. In 1884 when I was but fourteen years of age my father owned a young stallion. I had this horse to care for and have had a stalion every year since, at one time owning three stallions and a jack.

I only claim to know a small portion of what there is to be known about the horse, but I expect to continue to study and take all the horse literature obtainable. I am a breeder of pure-bred horses on a small scale and see nothing to criticise in the new law only that it should be made a little more severe and then the county attorney should see that the law is enforced.

One correspondent thinks the new law is a "slap in the face" of every man who owns a stallion. I think that many of the stallion owners deserve a slap also. The new law is not going to drive any of the good horses out of business in this locality, but the grade horse is. Near here is a man who has purchased his fourth imported Belgian stallion, all of them the best he could find at the time and many of them good enough to win first at several state fairs, worth $1,500 or $2,000. Many of his neighbors refuse to patronize this man's horse on account of the service fee, $15.00, preferring to use a grade horse that recently sold for $96.00 because the service fee was only $10.00. They claim that his colts are equally as good, which in most instances is true, for if a man is not a breeder he will not be a feeder, and if a man is a scrub breeder and feeder he will never raise good draft horses. But there is little to encourage a man to purchase a first-class horse and stand him in a locality where not one man in 100 ever raised a draft horse in his life. A horse to classify as a drafter must have quality, conformation, style and action, and weigh better than 1,600 pounds in fair flesh.

If we had a mare law similar to the stallion law it would be another step in the right direction and it might be well to add a man law to prohibit the scrub breeder from placing all the blame on the stalion.

Butler Co., Iowa J. A. Bell.

Someone has conservatively estimated that around 6,000,000 calves are annually slaughtered in this country, including those slaughtered on the farm. There thousands of calves are annually slaughtered that are of good beef type. Their owners' slaughter and market them at a tender age to rid the cow of her charge and put her into the dairy service again. The dairy cow is a short road to profit, but her steer calf, if kept on the farm until he has attained the yearling age and then sold to a beef cattle feeder, should in the long run net more profit. It might not all be represented in dollars and cents, but that calf, having the run of the farm for a year, would help enrich the soil fertility enough to well pay its keep.

1 Man 2 Row 3 Horse Bailor Cultivators Are Money Makers and Time Savers

TESTED SEED CORN

Guaranteed To Satisfy Or Your Money Back.

EVERY ear of our corn is tested for germination and we ship it in the ear, in the crate, so you can see just what it is. Our corn is adapted to your locality, no matter what part of the corn belt. Our growers are among the leading prize-winning exhibitors at the best corn shows, and our seed is especially selected and tested. Our price is extremely low when you consider that it only costs you less than 80c per acre for this specially selected and thoroughly tested seed. Tell us whether you want the Yellow Dent or the White Dent and we will guarantee the seed we send you will entirely satisfy or your money back. Price, shipped in the ear, in bushel crates, seed tested, $5 per bushel. A bushel will plant six to seven acres. Can you make a better investment? Order today. Address

GALLOWAY BROS.-BOWMAN CO., Box S. C. H., Waterloo, Iowa.

BARGAIN SEED

LEAMING Yellow Corn. Bred up in oil and protein, yields up to 100 bushels of grain and from two to five tons more ensilage per acre than most varieties. To close out we are making a price of $2 per bushel in less than 5-bushel lots. Over 5 bushels $1.75 per bushel. All shelled and graded and guaranteed to test 97 per cent germination. Address

WOODLAWN FARM, STERLING, ILLINOIS

SWEET CORN

For Fodder. Splendid feed for dairy cows and young stock. Drill it in, half-bushel per acre, and raise the best forage at low cost. Extra value for silage. Choicest quality evergreen fodder corn per bushel, $2.50; 10 bushels, $22.50; bags free. Address

IOWA SEED COMPANY, Dept. D 1, Des Moines, Iowa.

LEGAL DEPARTMENT

(Continued from page 9.)

oil shall fit the value of such property. Provision may be made in the articles of incorporation, exempting the private property of the stockholders from liability for the debts of the corporation.

SALE OF LAND—LOGS NOT FIXTURES.

A Subscriber, Chariton, Iowa.—A bought a farm last November, and took possession the first of March, 1913. Since I moved on the place the former owner has come and split all the logs which he had previously cut on the place and made them into fence posts. Had he a right to do this, and can he lawfully continue to do so?

Answer.—The logs cut by the former owner of the land, before you bought it, were not part of the land nor fixtures to it. They had been severed from the land, and constituted personal property, and the seller of the land had a right to remove them. He has no right to split them on your land, but he has a right to remove the logs and he is required by law to do it without delay in a reasonable time.

SALE OF ORIGINAL—DAMAGES.

A Subscriber, Donnellson, Iowa.—A traded a mule to B for a horse and about two months afterwards A found that the horse was an original. B is a regular horse buyer and he said nothing to A about the horse being an original when the trade was made. Can A recover damages from B, and if so to what amount?

Answer.—A cannot recover damages from B, unless B made false representations to A about the horse when the trade was made. As B said nothing at all about the condition of the horse, A has no legal cause of action for damages.

DEFECTIVE INCLINE—DAMAGES.

A subscriber, Mt. Zion, Iowa.—When delivering seed to a grain house D was required to haul his load of seed up an incline to the second story. This incline is very old, the sides being protected only by banisters of one-inch decayed pine boards and a couple of wires. This afforded no protection to D's team, and when the team was about half way up the incline the horses became frightened and crowded off, falling about six feet. One of the horses had its leg broken by the fall. Can D recover damages from the owner of the grain house?

Answer.—If D can prove to the satisfaction of the court, or jury, trying his cause, that the accident occurred by reason of the defective or dangerous nature of the incline, he can recover damages from the owner or operator of the grain house.

TRANSFER OF AUTO—REGISTRATION.

A Subscriber, Valeria, Iowa.—In the last part of December, 1912, I bought from a dealer a second-hand, crippled automobile, which had been used by the dealer as a demonstrator. Not being able to use it I did not get a transfer of registration, but the first part of the year 1913 I applied for number and registration. Does the law require me to pay for transfer of registration of 1912 before I can get my machine registered in 1913?

Answer.—Under the auto registration law of Iowa your machine will not be registered anew, but re-registered. You will have to pay to the secretary of state $1 and file the usual statement provided for in Sec. 10, page 71, Session Laws of 1911, to have change of ownership noted on registration book in office of secretary of state. The machines, if used, must be re-registered for the year 1913.

DIVISION LINE—ADVERSE POSSESSION.

A Subscriber, Timothy, Wis.—The owners of adjoining lands joined together and built a partition fence between their land twenty-seven years ago. The fence has been repaired a few times and remained where originally constructed till recently, when it gave way and became useless and a new fence must now be constructed. One of the landowners sold his place five years ago, and the purchaser contends that the old fence was not on the true line, and wants the new fence to be built on the true line. What is the law about the matter in Wisconsin?

Answer.—The old fence having been built by the owners of adjoining lands, and by them recognized as the line between their lands for more than twenty years, would be considered in law as fixing the division line, and it cannot now be changed by C, who purchased one of the farms. Where a division or boundary line has been acquiesced in for more than twenty years, it becomes the lawful division line by what is called adverse possession.

TIMBER LAND—PARTITION FENCE.

A Subscriber, Dudley, Iowa.—A and B own adjoining tracts of timber land. A's tract is unused by him. It is fenced on three sides by neighbors, A not owning any of the fence, and it is not fenced on the side along the public road. B pastures his tract and it is fenced with wire, but he wants to fence it hog tight. Can he compel A to pay for half the partition fence?

Answer.—He cannot compel A to construct or pay for half the partition fence. The owner of timber land, not used except for the timber thereon, and from which the owner derives no revenue or benefit, is not required by law to construct or contribute to a partition fence; besides, where a land owner chooses to let his land lie open, as A's land does to the public road, he is not required to build or pay for any part of a partition fence.

SUBTERRANEAN WATERS—WELLS.

A Subscriber, Goldfield, Iowa.—A has a flowing well curbed by two-inch gas pipe, to which he has attached a hydraulic ram to supply water to his house. The well is on high ground and the water rises about a foot and a half above the surface, furnishing twelve gallons per minute. B is about to sink a five-inch well on lower ground, that may raise water fifteen feet above the surface and will attach a ram to pump water to his residence, not on the same lot, but in another part of town. On account of the large pipe and being on lower ground B's well will stop or weaken A's well so that it will not operate his ram and thus make his expensive water system useless. If B would take only what water he actually needs, reducing the leakage at his well, it would not seriously interfere with A's well. What is the law in regard to this matter and how can injury to A's well be prevented?

Answer.—If the subterranean water supplying these wells is percolating, and not flowing in a crevice or channel, A cannot prevent B from fully operating his well, but if the water flows in a clearly defined underground channel, then A may obtain an injunction from the district court, restraining B from so using his well, or take more water than he actually needs, to the injury of A's well.

PAY ONLY THE HOLDER OF A NOTE.

A Subscriber, Hazleton, Iowa.—A gave his note for $1,000 to B who sold the note to C for full face value without A's knowledge. Afterwards A paid B $500 on the note, getting a receipt stating that it was applied on $1,000 note, giving date, also date when applied and name of holder, but in fact no indorsement was made on the note. Later A paid B another $100 to apply on note, but took no receipt and afterwards he paid B $380 to apply on note, but took no receipt. B noted amount down in a book and said he would endorse it on note. Finally A paid B the balance of the note six days before it was due and asked for the note. Then B said he had sold the note to C and could not get it just then and to call in a few days, but A has not got the note and C still holds it, believing it is not paid. (1) What must A do to recover the note? (2) Did B violate the law?

Answer.—(1) C can sue A for the full amount of the note, principal and interest, and recover judgment against him for the same. A will have to look to B for the money he paid B. A can recover the same by law if B is financially responsible. Payments of money on a note should never be made to a person who does not hold the note. (2) B rendered himself liable to a civil action, but it is doubtful whether he can be prosecuted criminally.

SILO AND HOG HOUSE—FIXTURES.

An Iowa Subscriber.—A rented a farm from B and has lived on it about five years. He built a silo on cement foundation, with guy wires running from the top of the silo to posts set in the ground. He also built a good hog house with posts set in the ground. The silo and hog house were built without the knowledge of B, but he now knows about them. Suppose he should sell the farm to C without saying anything about silo and hog house can A remove them when he vacates the premises?

Answer.—This is a very close and doubtful matter, but it is our opinion that the silo and the hog house are fixtures to the real estate, and in case B should sell the farm to C without reserving the silo and hog house, they would go to C as fixtures, and A would have no lawful right to remove them.

Cattle buyers must have a good opinion of the future cattle market; at any rate, the price of stockers and feeders remains high, regardless of the downcast condition of the fat stock market in comparison with the feeder price. There may be money in feeding cattle now, but it certainly is being done on a small margin between feeders and fat stuff.

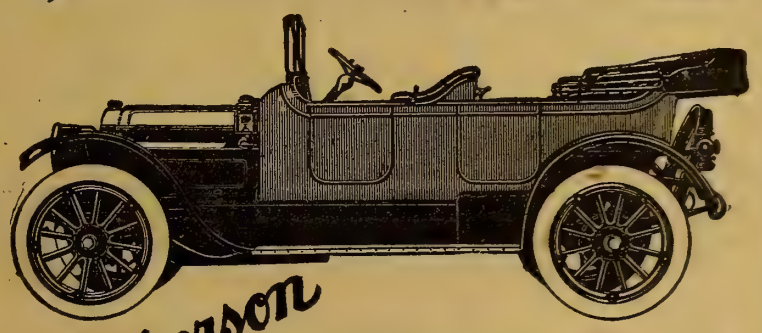
Now—and 20 Years from Now

This Is a
Lifetime Car



Apperson
"Jack Rabbit"

You can safely invest the hard-earned savings of many years in a "Jack Rabbit" Car.

No reason why you should ever need buy another car.

There are still in use Apperson-made cars that are very nearly a score of years old. We brought out the first American-made gasoline car in 1893, and have been years ahead of other builders ever since.

The average age of the 17,000 "Jack Rabbit" cars on the roads is 8 years.

No "Jack Rabbit" car has ever worn out. So far as durability is concerned, you are certain of a lifetime's service in the "Jack Rabbit."

No More Season Models

Now about style. There has been practically no change necessary in the mechanical design or construction of the "Jack Rabbit" for eight years. Accordingly, we have abandoned the policy of bringing out new models each season.

Your 20th Anniversary "Jack Rabbit" will be up-to-the-minute for many years to come. It will give you satisfactory service as long as you can run a car.

Cheapest to Maintain

Mechanical upkeep is almost nothing for "Jack Rabbit" owners. They are **built** to stand the most severe abuse of inexperienced drivers.

The chassis is strong enough to carry a truck, yet light and speedy. The "Jack Rabbit" is easy on tires. low in fuel cost—economical in every respect. Many a man with an income of $500 a year owns an Apperson and is not burdened with upkeep expense.

Investigate the Apperson
The Car With the Powerful Engine

This oldest car is the most distinctive on the market. Absolutely different—20 years' proof back of it. Write today for catalog and all the facts.

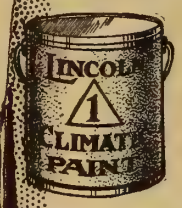
TWENTIETH ANNIVERSARY 1893 1913

Paint that Suits Another Climate Is Very Inferior Here

Why? Simply because climatic conditions affect the *lasting* qualities of paint, and paint made just *one* way—to meet *all* conditions—cannot give satisfactory service. The only paint manufactured on four different formulas to meet the four climatic conditions of the country is

Lincoln Climatic Paint



When you buy it you are absolutely *certain* of getting a paint to suit your climate—so it will not check, crack or peel off. Write us today for the

Lincoln Climatic Paint Book—Free

telling how we discovered the greatest of all paint truths. We'll also send a free copy of our helpful new booklet, "Home Painting Jobs—How to Do Them," filled with valuable advice on home beautifying, showing how to make the house more attractive with small labor and little expense.

Ask your dealer for Lincoln Climatic Paint, Lincoln Floor Paints, Lincoln Enamels, Lin-co-Lac for interior finish and furniture, Lincoln Walamo for giving walls a flat, washable finish. All these are superior for their particular uses. Be sure to say "Lincoln" when you want anything in the paint line.

WITH THE EDITOR.

MOTHER O' MINE.

If I were drowned in the deepest sea,
I know whose tears would come down to me:
Mother o' mine.

If I were hanged on the highest hill,
I know whose love would follow me still:
Mother o' mine.

If I were damned of body and soul,
I know whose prayers would make me whole:
Mother o' mine.
Rudyard Kipling.

It is not without reason that we say one of the sweetest, dearest words in the world is mother—that we link it with "home" and "heaven"—or that we have that saying, "What is home without a mother?" or that there are so many stories of men, great because they had great mothers. Mothers are, in a sense, the pivot upon which life turns as well as the center from which life springs.

We have all seen a little child gazing anxiously out of a window and asking every few moments, "Why don't mama come? I want mama." Every one in the family is like that child. Big brother may be less outspoken than little brother, who runs to her when he cuts his finger or stubs his toe or wants a cooky, but he wants her none the less; big sister makes no secret of her dependence on mother, and little sister is so devoted to her that she frets if she is not allowed to sit next her at table or is scolded for cuddling down beside her in church. Father may sometimes be thoughtless, or even a little unkind, but when he comes into the house and does not see her his first question invariably is, "Where is your mother?"

The family is woven about mother; the life, comfort and happiness of the members depend upon mother. What does the family do to make life comfortable and happy for mother?

HOME AND HOME MAKING.

LIFE'S COMMON THINGS.

The things of every day are all so sweet—
The morning meadows wet with dew,
The dance of daisies in the noon, the blue
Of far-off hills where twilight shadows lie,
The night, with all its tender mystery of sound
And silence, and God's starry sky!
Oh, life—the whole of life—is far too fleet,
The things of every day are all so sweet.

The common things of life are all so dear—
The waking in the soft half gloom
To find again the old familiar room,
The scents and sights and sounds that never tire,
The homely work, the plans, the lilt of baby's laugh,
The crackling of the open fire,
The waiting, then the footsteps coming near,
The opening door, the handclasp, and the kiss.
Is heaven not, after all, the Now and Here?
The common things of life are all so dear.

—Alice E. Allen.

LAUNDRY HINTS.

Washing Flannels—If washed with soap, flannels usually turn yellow and are not so nice as when new. If you wish to cleanse them without any bad results, put some wheat flour into soft water and stir well so that balls will not form. Wash the flannels in this just as in soapy water, then rinse in cold water and hang out to dry.

To Wash Quilts Easily—When making quilts or comfortables, cover the cotton batting with mosquito netting and sew firmly in place. Then sew the outsides together in the shape of a pillow case and slip the pad inside. Tack it sufficiently to hold the pad in place. When soiled, the outside may be very easily removed and washed.

To Wash a White Wool Sweater—Wash in lukewarm suds until it is clean. Then rinse in clear water. Squeeze out the water; spread the sweater upon a clean Turkish towel and roll the two up tightly together. When the towel is wet through, exchange for a dry one and roll up in this as before. Repeat until the garment is dry. It will look like new.

To Make A Good Washing Fluid—Put one can of lye, five cents' worth each of salts of tartar and crystal ammonia, and two tablespoonfuls of powdered borax into a gallon crock or jug. Pour one quart of boiling rain water over them and after it has ceased bubbling pour enough rain water in to fill the jar. It is then ready for use. One quart cup of the fluid should be added to a boilerful of white clothes.

FROM THE HOME COOK BOOK.

Walnut Bread—If a variety is desired proceed as follows: When the creamed mass has been added to sponge, divide the sponge evenly, take half into another mixing bowl; to one-half add one-half cupful of currants, one and one-half cupfuls of the flour and knead as usual. Into the other half stir one-half cupful of ground walnuts, the rest of flour, and when raised a second time each can be molded into a loaf; this gives two kinds of bread from one sponge.

Pieplant Tapioca—Soak one cup of tapioca over night and in the morning cook it until clear, and of the consistency of warm blanc mange. In a buttered dish put one pint of pieplant, add one cup or more of sugar, enough to sweeten well, flavor with a little cinnamon or ginger root, pour over it the tapioca, cover and bake until the pieplant is done.

Pieplant Snowballs—Boil one cup of rice until soft in well-salted water. Wring small pudding cloths from hot water, spread the rice about one-half inch thick on them, add about one-half cup of finely chopped pieplant to each, draw up the cloth until the rice covers the pieplant all around, tie up tightly, and steam for twenty minutes. Remove the cloths carefully and turn out the balls on a plate, and serve with any preferred sauce.

Tomato Soup—A delicious and nutritious soup is made in this way by Bettina, a Finnish maid, whose cooking is something to remember. Cook a quart can of tomatoes for twenty minutes, then rub through a fine sieve. Season with salt and pepper and a few drops of onion juice. Cook a quart of milk in the double boiler, adding when at the boiling point, two tablespoonfuls of flour stirred smooth in a little cold milk. Add two tablespoonfuls of butter, now beat the yolks of two or three eggs in a tureen, pour the milk into the tomatoes and the mixture into the tureen over the eggs, beating vigorously so they will not curdle. Sprinkle finely-cut parsley over the top and serve very hot with croutons or bread sticks.

AMONG OURSELVES.

I think I must tell the friends of two interesting little things in connection with the picture we recently had of Mrs. C. W. Soesbe.

A few days after her picture was published Mrs. Soesbe had a letter from Oklahoma, asking if she were the Clara Stuart, with whom the writer had been cabin mate en route from Montreal to Liverpool in 1900. Then, in my mail bag, comes a letter from Iowa from a woman to whom I referred Mrs. Soesbe for club information. She writes: "Naturally we were all

"RANGER" BICYCLES

Are equipped with **puncture-proof tires, imported roller chains,** imported English flanged sprockets, English featherweight steel mud guards, imported Brampton pedals, motor style saddles, bars and grips, and other distinctive features possessed by no other bicycle. No effort or expense has been spared to make the **"Ranger" the World's Best Bicycle.** Improved factory methods and greatly increased output for 1913 enable us to make a *marvelous new price offer.* Something *very special* to the first purchasers of 1913 models in each town. Write us *today.*

WE SHIP ON APPROVAL *without a cent in advance,* to any person, anywhere in the United States, and *prepay the freight.* We only ask you to examine and try the "Ranger" *without a cent expense to yourself* before you think of buying any other bicycle.

10 DAYS FREE TRIAL is allowed on every "Ranger" bicycle. *Not a cent cost* to you if you do not wish to keep it after riding it for 10 days and putting it to every test. Our "Ranger" bicycles are of such high quality, handsome appearance and low price that we are willing to ship to you, *prepaid,* for your examination and trial, and leave it entirely to you whether you wish to keep it or not.

LOW FACTORY PRICES Our great output, perfected methods and machinery enable us to offer you direct from the factory the best bicycle ever produced at a price that will be a *revelation to you.* **Do not buy** a Bicycle or a pair of Tires until you receive our large complete catalog and learn our direct factory price and *remarkable special offer.*

SECOND-HAND BICYCLES—a limited number taken in trade by our Chicago retail stores will be closed out at once, at $3 to $8 each. Descriptive bargain list free.

RIDER AGENTS WANTED in every town and locality to ride and exhibit a sample 1913 "Ranger" bicycle furnished by us. In your spare time you can take many orders for our bicycles, tires and sundries. Write at once for our large Catalog and a remarkable *special proposition* we will make you on the first 1913 models going to your town.

TIRES, rear wheels with coaster brake, inner tubes, lamps, cyclometers, parts, repairs and everything in the bicycle line at **half usual prices. Do not wait**—write today for large catalog containing a great fund of interesting, useful bicycle information. It only costs a postal to get everything. **Write it now.**

MEAD CYCLE CO., Dept. W 184, CHICAGO

interested in the picture you gave us of Mrs. Soesbe and in her interesting letter. Mrs. Soesbe gave us much assistance; we now have our organization complete and enthusiasm runs high." This friend adds: "All who write for Among Ourselves seem to be personally near, for it is the great common woman's heart of us all that responds one to the other."

And now for our program whose first number is something about walls and papering, by Mrs. Unionville:

Spring, the most beautiful time of the year, has come at last. The flowers are in bloom and the woodlands are ringing with the songs of birds. It seems as if the world is putting on a new coat of beauty. Now is the time when we busy housewives are trying to make our houses look as if they too were putting on a new coat. Our hardest job in cleaning house is the paper hanging. Our first words are, "I don't know which color to choose." Most of us want our rooms to be light. If we choose a light paper the light will be greatly increased, but hanging the paper is more trouble than the choosing, as we all are aware. Many times after we have finished papering the paper will begin to peel off. This may be prevented by putting a dime's worth of glue (melted) and about a quart of sugar (just common granulated sugar) into the paste. Sometimes when the paper peels off it is caused by the wind blowing through the cracks in the wall. A strip of cloth (muslin is best) should be pasted over the cracks, for when the paper once gets broken it is soon ruined. If you do not have brushes for paper you can make one. Take an old clothes brush and nail it to the end of a smooth board about two or three inches wide and as long as you want it.

It is good to have this talk at this time and we thank "Mrs. Unionville," as we do "A Farmer's Wife," who comes to give us of her experience in decorating and freshening the home:

I will give some of my experience on fixing rooms cozy and cheap, especially bed rooms that have never been papered. On one side of each room the ceiling slopes down with the roof, so I measured off twenty inches all around for drop ceiling; for one I used cream-colored tinting. The side walls were light turquoise blue, with narrow border or divider of gold with turquoise figures. Curtains of unbleached muslin, five cents per yard, bordered at bottom with wide stripe of blue and white cretonne; the top which hangs over the pole about a foot has a narrow stripe. The blue matches walls. I repainted an old bed with white enamel paint, putting matting on floor with rugs. The bed could have a spread to match curtains, over blue. I have not made mine yet. Room No. 2, white ceiling, also drop with blue, blue walls, divider of narrow paper border in silver and blue, also repainted the bed, old-fashioned, four poster, with casters inserted in legs. I gave the dresser and the commode several coats of white enamel and used white Swiss for curtains, etc. Room No. 3, has pink and white walls and oak furniture. Down stairs bed room, blue ceiling like walls of front room of turquoise mixed with a little white to make shade lighter, tan walls, no drop ceiling. In this room border of six-inch paper, landscape effect, blue sky and water, light brown trees, cream cheese-cloth curtains stenciled in blue and green, dark oak furniture, plain colored matting, cover for dresser and commode half-bleached crash stenciled in blue and green.

It is wonderful and most gratifying what can be accomplished at slight expense by a woman with ingenuity and perseverance. The idea of giving the various rooms a predominating color, as "A Farmer's Wife" has done, is very good and does not cost any more than the old way. Try it, friends, and see how satisfying it is to live in a room of this kind.

Two timely hints connected with the more prosaic side of spring house freshening will be presented by Mrs. M. H. and "A Colorado Reader:"

I wish to warn your readers to be careful in the use of corrosive sublimate in cleaning beds. Lack of care in this respect has caused me to lose the use of my right hand for the past six weeks. I wish that instead of it I had applied the following mixture, my former remedy for bugs, which always proved effective: First wash the beds with cold water and apply turpentine with a small oil can. Slightly beat the white of one egg and stir in five cents' worth of quicksilver, rubbing the mixture on with a quill or brush. One application completely exterminates them. I wish I had used it again instead of the corrosive sublimate.

A good insect pest remedy is: Put enough painter's glue in a pail of water and wash the walls and wood work, and furniture, being sure it gets well into all cracks. This will paste all insects and eggs into the crack. If walls are papered the paper should be removed.

It is so necessary to know about these things, what are efficacious and what dangerous, that the friends have served us effectively in what they have brought us along this line.

"Sister Nell" has a question to ask:

Will the lady who wrote several weeks ago for the Home Department about the soup beans kindly tell the name and where they can be purchased, as I have always wanted some, but did not known where to get them or what to ask for?

As the season of little meat is upon us there may be others who would be glad to know of these beans. We shall hope for a prompt reply to "Sister Nell's" inquiry. How would it be if some one of our housewives would give us experience and recipes along the line of meat substitutes?

THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Aunt Mary, Hawley, Minn.

WHAT CAN WE DO?

(First Prize.)

(Spoken to the Young People of our Literary.—April 4, 1913.)

I am neither a brilliant writer nor an excellent talker, but out of my fullness of heart I find it possible to say a few words to you all today, and because you are all my friends I shall try and be simple and direct in what I have to say.

This is the anniversary of the day when we organized our young people's Literary, and it is a fitting day to sum up, and think of what we have accomplished and I am glad to say I think it is a great deal, considering the short time we have had. But we must also think, and think seriously, of what we can do during the future, individually, as well as in a body, for the betterment of ourselves and fellowmen. I think, and am sure that each one of you has thought seriously of the many topics we have discussed during the past year. But is it not time for action?

We are young and strong, and capable of bringing to the light and

Trojan Steel Gates Are Real Gates.

K-R-I-T

The K-r-i-t-Farmer drives a low-priced car of high-priced efficiency

That's what 4000 K-r-i-t-Farmers tell us. They satisfied themselves on the power of the K-r-i-t motor, the durability of the K-r-i-t transmission and the strength of the K-r-i-t axle.

They have proved for themselves that the motor is the heart, the lungs, the very life of any motor car; the transmission, its muscles and nerves; the axle its backbone and legs.

No farmer would buy a horse with weak legs or a weak back. The K-r-i-t-Farmer knows the strength and safety of the K-r-i-t Axle. He enjoys that feeling of security afforded by the knowledge of extra braking surface. Here's how intrinsically good the K-r-i-t Axle really is:

The K-r-i-t axle is of the semi-floating, split housing type.

The malleable iron and tube construction give a rigid support to the gear bearings, maintaining an exact alignment of the gears at all times which is essential to quiet running and long life.

The centre housing casting is so constructed that the metal required for the bearing supports also carries the stresses of the load on the axle.

This construction is actually lighter in weight than a corresponding pressed steel full floating axle and is used by most of the higher priced cars and almost universally on the best foreign cars.

Once the gears are set and are satisfactory and quiet under test it is impossible for them to get out of alignment.

It requires great accuracy to make axles of this type so they can be assembled economically.

This we are enabled to do as we make our own gears within our own organization.

We have used this type of axle on K-r-i-t cars for the past three years and never have we had returned to us a broken axle shaft and repairs are practically nil.

The spring suspension on the K-r-i-t car helps the axle in that it is flexible and does not bind the axle or put any undue strain upon it.

Let us tell you what 4000 K-r-i-t-Farmers say of the K-r-i-t axle.

Send for the name and address of the nearest K-r-i-t dealer and he will be glad to bring the K-r-i-t to your farm.

Write us today—now.

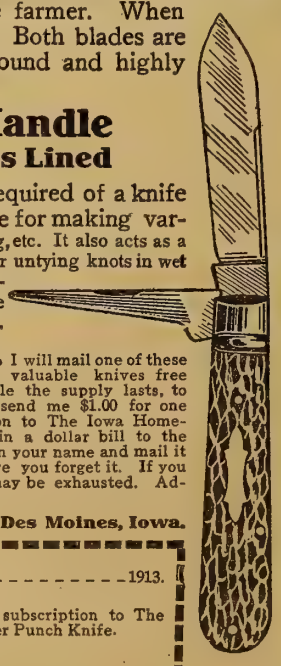
THIS KNIFE COSTS MY READERS NOTHING

You have read about the famous Leather Punch Pocket Knife—the knife that is called the "Marvel of Mechanical Ingenuity"—the only knife that was ever made especially for the farmer. When opened it is six and one-half inches long. Both blades are of finest tempered tool steel, perfectly ground and highly polished. The knife is complete with

Best Quality Stag Handle
Securely Riveted and Brass Lined

The large blade fills every common use required of a knife while the leather punch blade is indispensable for making various sized holes in leather for buckles, rivets, belt lacing, etc. It also acts as a swedging awl or marlin spike when turned to the left. For untying knots in wet rope and hard leather this blade has no equal. While possessing all these valuable features, the knife is no more clumsy or awkward to carry than an ordinary pocket knife.



My Guarantee I am so sure that this knife is all I claim for it that I am going to place a gilt edge guarantee on it. Send me $1.00 for one year's subscription to The Iowa Homestead. I will mail you a knife free. Try it for ten days. If it is not just what I claim it to be, you can return it to me and I will refund your money. You take no chances.

My Offer I will mail one of these valuable knives free and prepaid, while the supply lasts, to anyone who will send me $1.00 for one year's subscription to The Iowa Homestead. Simply pin a dollar bill to the coupon below, sign your name and mail it to me today before you forget it. If you wait my supply may be exhausted. Address all orders to

denouncing the things that are impure, and to uphold the truth, and the beautiful things of life. Of course, we think in a small neighborhood there is nothing to be done, and yet—the small things, those that underlie the beautiful, truthful soul everyone has in their keeping, are circulating everywhere.

Take gossip, for instance. It is not an uncommon thing to hear particularly personal affairs of people discussed in public, and is it not true that it is often magnified until it becomes an absolute untruth? Not only older people, but younger members of the family "spread the news," regardless of the feelings of the person concerned. This could easily be remedied, individually, if each person made up his mind, sincerely, never to repeat any unpleasant things.

Another is the profuse use of profane language commonly called "slang." It is rather jarring to hear an otherwise refined boy or girl repeat, "Oh, gee!" twenty times in as many minutes during a conversation. In this unrestrained country of ours where the young people can nearly always talk and act to their own liking without particular restraint from parents or friends, it is up to them to carefully restrain themselves that people may know that Americanism does not mean vulgarity, but capability of conducting themselves in a manner that is an honor to that trust. Don't you think so?

And another thing: are we broadening our minds beyond the sphere where we live in the quietness and seclusion of our own neighborhood, or work? Of course. Have we not discussed during the past few months, any number of questions pertaining to the things of vital importance to the welfare of people in general, political, as well as industrial?

Some of the ideas given were well worth distinct approval. But what can we do to improve these things? By beginning at home! Does that not strike some of you as strange? I have studied long, as no doubt a great many of you have, because I know your ideals are high, and your greatest ambition is to do the most good. Individually, we can consider and weigh this matter and I think you will all come to the conclusion that if you make your own life just as good as possible it is going to do more good than trying to reform others first. And altogether, what can we do? Rather say, what can't we do? But that would be rash impetuousness of youth as father says. But, we really can do a great deal together. What do Sunday school classes, women's clubs, civic leagues, etc., do? And are we not an organization? There are seventeen earnest workers here. With health, ambition and high ideals to guide us. Why should we not do as the parable says, "Go forth together," and think over the needs of our neighborhood and our ability, and then "Do!"

May we ever keep up our ideals, and look to God for strength and I am sure our work will not be in vain.

Bedouin.

Our Friends, The Birds.

(Second Prize.)

He must be very dull indeed who is not inspired by the plaintive notes of a spring songster. To my notion there is no music sweeter than that of birds. It thrills the heart with joy and makes the heart move with love when these gay little friends of nature first visit our clime. We may watch their habits and learn many lessons from them. They teach us cheerfulness and perseverance. They sing praises continually, their praises to their maker. There are many kinds of birds. They come as soon as the frost has left and stay with us until the frost comes in fall. Some birds destroy many harmful insects; there are few that do harm; the numbers of useful ones are greater than the ones that do harm. Birds are company to old and young. Try to tame birds and you will have good friends. They soon learn our voices and will even distinguish between persons. Most birds are clean in their habits and teach cleanliness. Birds are sympathetic, often showing great feeling for one another. A mother bird will show much grief for her young ones and will sacrifice much for them. Do not kill birds, but let them live to enjoy life.

Phylla, age 13.

My Bantam Hen.

(Third Prize.)

I had one little bantam rooster and I wanted a little hen, so I got eight eggs. Mama put the eggs under a chicken hen. Six of them hatched and were as pert as they could be. But every night the hen mashed one till there was only one left. I took it away from the hen and raised it by hand. Mama and I thought it was a hen. One day Mama came in and said to come and see the bantam. I went, and there on the fence sat the bantam hen crowing with all her might!

Belma, age 10.

PLEASANT FIELDS OF HOLY WRIT

Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON

2d Quar. Lesson 7, Gen. 42. May 18, 1913.

JOSEPH MEETS HIS BRETHREN—THE STORY.

That inimitable story teller, Edward Everett Hale, runs an imaginative parallel to the authentic history of Joseph. It is to the effect that once the Hebrew lad is on the point of escaping by night from the camp of the slave traders, when a yellow dog barks, his keepers are awakened, and he is retaken. An onlooker wants to kill the dog before he barks, and thus help Joseph to escape. But the guardian angel cries, "Hands off!" And just to show him what would happen if he were to interfere in this way, he lets him try it out in an ideal world. The dog is killed. Joseph escapes; his father is happy; his brothers comforted. But the famine comes, and there has been no Joseph to store the corn in Egypt. All the Orient famishes. Great civilizations perish; others remain undeveloped because a yellow dog was not allowed to bark. It is a clever way of showing how great events may turn on small hinges and the suffering of many be saved by the suffering of one. Never were tables turned more completely. The brothers futilely scanned the faces of passing slaves, thinking they might possibly see in transit the brother they had sold into bondage twenty years before; but they looked straight into the face of Pharaoh's secretary of state, wearing the king's purple and signet ring without the slightest suspicion that their own blood ran in his veins. "They knew him not." Joseph naturally had no such difficulty. His brothers were grown men when he was parted from them. They had changed little, if any. They were in their own native shepherd garb. "Joseph knew his brethren," but he could not know their feeling and attitude toward himself, and was perfectly justified in putting them to the test, severe though it was. Joseph equaled, if he did not surpass, his kingly descendant in the judicial expedient he used to try out his brothers. It was not until they were actually in their brother's sorry plight that they felt the pangs of conscience and said to each other: "We are guilty. We saw his anguish. Yet we would not hear him. Now his distress is ours." Little did they dream that the prince around whose neck hung Pharaoh's golden chain, and at whose door stood a chariot second only to that of the king, understood every syllable of the native dialect in which they talked. Joseph showed how fit he was to wear the purple by not immediately disclosing his identity and thus magnifying himself. Again, he loves his brothers, in spite of their unkindness, far too well to simply condone their offense. He felt his moral obligation to reform his brothers before he forgave them.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

2144 Ladies' Bust Supporter.—The brassiere is a boon for the stout or full-busted woman. This is a good model. It crosses at the back so as to fit well down over the figure in front. The center seam and darts may be boned to assist in holding the figure smoothly. The pattern 2144 is cut in sizes 32 to 48 inches bust measure. Medium size requires ¾ yard of 36-inch material. Price of pattern ten cents.

6021 Ladies' Shirt Waist.—A pretty and fashionable shirt waist is here offered. The garment is made with front and collar in one and may have long or short sleeves. The short sleeves are finished with pointed turn-back cuffs. Silk, linen, madras, poplin or serge may be used to make this waist with the collar and cuffs of contrasting material.

The pattern 6021 is cut in sizes 34 to 42 inches bust measure. Medium size requires 2¼ yards of 36-inch material with ¾ yard of 24-inch contrasting goods. Price of pattern ten cents.

2882 Ladies' Apron.—This apron is made in sack style. It can be made with either the high neck and rolling collar or it can be made with the round or square neck. Gingham, percale, linen or chambray can be used to make this apron.

The pattern 2882 is cut in sizes 32, 36, 40 and 44 inches bust measure. Medium size requires 5⅛ yards of 36-inch material. Price of pattern ten cents.

4036 Girls' Apron.—This apron is made in one piece. It may be made of gingham, lawn or chambray and trimmed with edging and insertion.

The pattern 4036 is cut in sizes 6, 8, 10 and 12 years. Medium size requires 1½ yards of 36-inch material, 3¾ yards of edging. Price of pattern ten cents.

6061 Misses' Dress.—This dress is for the miss and small woman. The pattern provides for two styles of collar and the three-gored skirt may be with either the empire or regulation waistline. The closing is at the front.

The pattern 6061 is cut in sizes 14, 16 and 18 years. Medium size requires 4⅜ yards of 36-inch material with ¾ yard of 27-inch goods to trim. Price of pattern ten cents.

Schmelzer Arms Co.

KANSAS CITY, MO.

AGRICULTURAL FAIRS.

According to a bulletin of the department of agriculture, the first full-fledged agricultural fair, primarily for competitive exhibits instead of for marketing, was held at the Columbian Agricultural Society, which was organized in 1809 by a number of gentlemen interested in agriculture residing in Maryland, Virginia and the District of Columbia.

Its first exhibition was held in Georgetown, May 10, 1809, and the National Intelligencer of that day reported that it was "attended by a numerous assemblage of members of the society, among whom we noticed the president and his lady, the secretary of state, the secretary of the treasury, the secretary of war, the comptroller, register, etc., and many other ladies and gentlemen of respectability."

This fair was mainly devoted to domestic animals and manufactures. Semi-annual fairs were held until the spring of 1812, when the war with England and the expiration of the time for which the society was organized caused its discontinuance.

The oldest existing agricultural society that holds fairs is the Berkshire Agricultural Society, Pittsfield, Mass., which held its first fair in the autumn of 1810 or only one and one-half years after the first fair of the Columbian Agricultural Society.

FLY APHORISMS.

Flies in the dining room usually precede nurses in the sick room.

Screens in the windows prevent crepe on the door.

Flies, as well as bad water, spread typhoid.

A fly in the milk may mean a member of a family in the grave.

A fly has natural enemies; the most persistent and most effective should be man.

It costs less to buy a screen door than to get sick and lay off for a month.

It's a short haul from the garbage can to the dining table via the fly route.

If at first you don't succeed, swat, swat, swat again.—Kansas City Star.

THE SUCCESS OF ROAD DRAG DAY.

(Continued from page 3.)

of the farmer and of the local merchant. The Iowa farmers entered into the matter in the proper spirit, being careful not to pick out the best and smoothest parts of the roadway, but dragging the rough and impassable parts so as to put the roads in good condition and thus fulfil the exact spirit of the occasion. Practically every one of the farmers who entered Stuart was an enthusiastic dragger and declared that the road drag is as indispensable a piece of farm machinery as anything they know. Many of the road drags were simple, homemade, split-log affairs, but few being purchased ones, showing that road dragging is not dependent upon expensive machinery, but that enthusiasm and time are the main factors, the expense of dragging being of minor consideration.

Other towns have followed the Stuart example with good success and many miles of highway have been put in first-class condition. Co-operation between the small-town merchants and farmers is all that is necessary, the merchandise prizes being sufficient to give the proper incentive, the farmers being only too glad to do actual work. The amount of merchandise pledged by the town merchants to each farmer approximated $5, so that the entire outlay for this successful Stuart Road Drag Day was only $125, distributed among practically every merchant of the town, a small individual outlay considering the benefit to trade from the improved roads and from the winning of the friendship of a score of prosperous farmers.

Plans are being laid already for similar celebrations, not only throughout Iowa generally, but throughout the entire grain belt. Notwithstanding the fact that the farmers are busy in their fields there is a general realization that a half day spent in as good a cause as road dragging is time well invested, with monetary returns forthcoming not far in the future.

—a double investment

At the price of ordinary silver, you can also secure the long-wearing quality of

ROCKFORD Silverware

heavier than standard

Your jeweler will gladly show you the beautiful patterns that we make and tell you why our ware is a double investment. Each piece is uniform in wearing quality, and a half dozen knives and forks starts the assembly of a beautiful addition to your table.

HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

THE LIVE STOCK MARKET

Union Stock Yards, Chicago, Ill. May 10th—Demoralization with a big "D." has again overtaken the beef cattle trade. Closing prices this week are down on most all classes to the lowest point of the year to date and if further declines are to be side stepped next week it will be up to the country to do some heroic work in checking the marketward movement. It has been a week of adversity for the selling side in all departments of the live stock trade. Instead of following the advice sent broadcast against overloading the cattle and sheep markets this week, 10,000 more cattle have reached the six leading western markets than the week previous and the local sheep run has been the second largest for any week since February. Hog receipts have also been heavier than expected at this busy corn-planting period and although swine values have recovred fairly from mid-week declines the trend of prices will doubtless be downward during the latter half of May and through June.

TEXAS GRASS CATTLE RUNNING.

Chicago has received 48,000 cattle this week and thousands of them had no place in market circles at this juncture. Six western points have had an aggregate crop of about 120,000. Texas is shipping grass and caked stuff freely to St. Louis, Kansas City and southwestern markets and they have been a factor, and promise to be a bigger one for the immediate future in the declines registered, particularly for the medium and low-grade native steers and the native butcher stock with which they compete. Texas cattle will be run right along now and the half-fat and medium natives should be held back. Far-sighted traders are looking forward to light receipts in July and August and those who are now rushing half-fat cattle to market will doubtless then realize their mistake.

AS TO FREE MEATS.

Causes for the premature lequidation of cattle that has been runing riot for the last fortnight or more have been previously pointed out in these columns. The assurance by traders here that free beef cannot possibly affect cattle to be marketed within the next few months is worthy of reiteration, although it seems to be falling on deaf ears. If liquidation involved only finished cattle the matter would be less serious, as their place now is at market, but the furore is dumping into the market hopper thousands of light cattle that ought to have been given a good corn-crib cross and to make matters worse the country has ceased buying fleshy feeding cattle, although feed is abundant.

STILLER CATTLE RUNNING.

Distellery cattle from Kentucky and other southern points are now moving out to eastern markets at the rate of around 6,000 a week and in thier wake hovers the crop of Illinois and Indiana slop-fed stuff. This reduces the demand for the shipping classes of steers at this market and is a factor that must be taken into account for the next six weeks or more.

Hard and fast statements as to the amount of the decline effected since the best time of the latter half of April cannot be made with any degree of accruacy, but that the rank and file of the beef steers grading below strictly choice and most of the good to choice fat cows and heifers have slumped off fifty to seventy-five cents per hundredweight within the last three weeks admits of no dispute. In extreme cases declines of eighty-five cents to $1.00 on yearlings of both sexes and plain to medium beef steers are quoted. Same steers are fifty cents lower than on Monday of this week. The nine-cent bullock is out of commission. Although a $9.10 top was made last Monday by a two-car drove of ripe heavy beeves, it is doubtful if the same kind could not beat $8.80 and $8.25 to $8.60 is buying very choice cattle, while the class of steers selling within this range at the start this week is now going at $7.75 to $8.25. Good dressed beef bulloks, a lot of them are now selling under $8.00, in fact, the $7.50 cattle at weekend have not been of a class to be sneezed at as they have been decent dressers. Quite a sprinkling of 850 to 1,100-pound steers, in the abscure of a feeder outlet for many of them have dropped to $7.00 to $7.40 into killing channels. The market has been glutted with yearlings and the kinds which are neither finished or thin have been as hard hit as anything.

FEEDER DEMAND SLUMPS.

Country buyers of stock and feeding cattle are backing away from buying the fleshy kinds in a manner that betokens a fear of future market development, while tight money, the evident certainty to the minds of feeders that meats will go on the free list and the fact that corn planting has engaged the attention of many prospective buyers have been factors of depression in the trade. Most feeding steers are twenty-five cents lower this week than last, though some of the qualitied lighter-fleshed kinds have escaped with a ten to fifteen-cent decline and some of the top notch stockers averaging under 700 pounds have held fairly steady. Demand, however, has fallen far short of expectations from all sources since the free meat bugaboo and consequent liquidation and declines in beef cattle became operative and thousands upon thousands of acres of good pastures, now ripe and ready to entertain and convert their juicy spring grasses into beef remain unstocked. A local stock cattle dealer takes this view of the situation: "Those who have plenty of grass I would advise to lay in their cattle now instead of waiting until midsummer. Cattle bought to graze now are frozen out and dried out and weigh light for the size of the bullock. Big gains can be expected in the next ninety days on grass, and considering the condition of cattle for flesh now as to flesh in midsummer, and gains that can be made the first half of the grazing season, I think that cattle bought now would prove cheaper than those bought later on, even if prices, for any reason, prove to be substntially lower later. It is also my experience that cattle started on pasture with the grass graze better and do better than when turned in on the heavy grass in midsummer right at fly time."

WILL SWAT BUTCHER STOCK.

More breakers are seen ahead in the butcher cattle market. Although most of the good to choice fat cows are fifty to seventy-five cents lower and the bulk of the yearling heifer stuff seventy-five cents lower than the April high spot, prices are still relatively higher than steers and a continuance of liberal marketings of Texas stuff for the next few weeks, which is logically expected, can have but one effect, that of pulling all native she stock values from canners up to the best to still lower levels in case receipts of native butcher and beef cattle closely approach their recent volume. Bulls are closing mostly twenty-five cents lower than last week and largely seventy-five cents lower than the high time two weeks ago. Calves are holding last week's closing prices, but the market, too, looks top heavy just at this time.

Quotations for all classes of cattle follow:

BEEF STEERS.	
Prime steers, 1,300-1,700 lbs.	$8.60@8.80
Choice steers, 1,250-1,500 lbs	8.25@8.50
Choice steers, 1,100-1,250 lbs.	8.20@8.50
Good to prime yearlings	8.00@8.65
Medium to good yearlings	7.50@8.00
Common to fair yearlings	7.10@7.50
Good steers, 1,100-1,400 lbs	7.65@8.15
Good steers, 1,000-1,200 lbs	7.60@8.00
Fair steers, 900-1,200 lbs	7.10@7.50
Medium steers, 850-950 lbs	7.00@7.35
Inferior steers, 800-850 lbs	6.50@6.90
STOCKERS AND FEEDERS.	
Selected, 900-1,150 lbs	7.60@7.85
Selected, 650-900 lbs	7.50@7.85
Fair to good, 600-900 lbs	7.00@7.40
Common to fair, 500-800 lbs	6.50@7.00
Inferior, 500-650 lbs	6.00@6.35
Stock and feeding heifers	5.50@6.50
Stock and feeding cows	5.25@6.00
BEEF COWS.	
Choice to prime fed cows	6.65@7.60
Good to choice cows	6.00@6.65
Fair to good cows	5.40@6.00
Com. to fair butcher cows	5.00@5.40
CANNERS AND CUTTERS.	
Good to ch. heavy cutters	4.75@5.00
Fair to good light cutters	4.50@4.75
Fair to good canners	4.15@4.40
Poor to fair canners	3.80@4.15
Old, thin, weak shells	3.25@3.75
HEIFERS.	
Choice to prime heifers	7.25@8.25
Good to chice heifers	6.65@7.25
Fair to good heifers	6.00@6.75
Common to fair heifers	5.25@6.00
BULLS.	
Good to choice bolognas	6.15@6.35
Light and medium bolognas	5.75@6.10
Canenr and poor light	5.25@5.60
Fair to good butchers	6.40@6.75
Choice to fancy	6.85@7.50
VEAL CALVES.	
Good to prime vealers	8.50@9.00
Fair to good light vealers	8.25@8.50
Good to choice stock calves	7.00@7.65
Inferior to fair hvy. calves	4.75@6.00
Good to ch. heavy calves	6.25@7.00

MORE HOGS THAN EXPECTED.

Considering corn-planting activities, hog receipts have been liberal this week, the local supply having been within 8,000 of the preceding week's marketing and eleven points having had an aggregate supply during the first five days of the week of 406,000, or only 16,000 less than the like period of the week previous and 43,000 more than a year ago. Shipping demand has fallen off sharply, less than 11,000 hogs having gone East from Chicago during the first five days of the week, against practically 25,000 like period last week. Thursday was the low day of the week with a top of $8.42 and the average price down to $8.33, against an $8.60 top and $8.45 average on the closing day last week. Friday's trade, however, reacted to within about five cents of last week's closing basis, with sales ranging from $7.90 to $8.55 and the bulk going at $8.35 to $8.50.

FAT STEERS TO BE MARKETED.

Packers figure that feed abundance means a heavier summer run of hogs than generally forcasted. Several marketing of fat sows is a certainty and cheap corn means that every possible pound of weight will be piled on their backs before they are started to market. Pigs were farrowed late this year, consequently the big movement of fat sows will be behind the time schedule of former years, but that it will materialize admits of no doubt. Packers are relying on this run to fill their lard kettles, replentish depleated stocks and to enable them to work prices down rather sharply between now and July 1st. Today's closing quotations:

Bulk of sales	$8.35@8.50
Mixed, 215 to 250 lbs	8.25@8.40
Mixed, 170 to 220 lbs	8.35@8.50
Medium weights	8.35@8.45
Light butchers	8.40@8.50
Heavy butchers	8.40@8.45
Light shipping	8.40@8.45
Heavy shipping	8.35@8.45
Heavy packing	8.00@8.25
Rough heavy packing	7.80@8.00
Throwout packing sows	7.50@7.90
Fair to choice light	8.25@8.45
Light-light, 125 to 165 lbs.	8.20@8.35
Pigs, good to fancy	7.25@8.30
Pigs, inferior to fair	6.40@7.20
Boars, poor to good	3.50@4.50
Stags, subject to dockage	8.35@8.30
Government throwouts	4.50@6.20
Government pigs	2.00@3.50

SHEEP VALES BUMPED.

Sheep and lamb values have had a twenty-five to fifty-cent break this week, depressing influences being semi-demoralized eastern dressed mutton markets, a run of over 85,000 here, the second largest week's supply since February, and heavy marketings at Fort Work, Kansas City and St. Louis of Texas grass sheep. Aged sheep of medium and plain class have borne the brunt of the decline, while choice handy weight shorn lambs and the prime high-dressing wooled Colorado lambs have been least affected. Next week's supply is expected to prove lighter and it will need be if further declines are averted, although any market decrease in receipts will probably restore some of the market's lost bloom. Colorado are nearly all in and prime heandy lambs should do a relatively good stunt between now and June 1st. The van guard of the southern spring lamb crop is, however, showing up, and lambs from that source are coming good which will make the growing scarcity of finished dry-fed yearling lambs less actutely felt. Quotations:

SHORN STOCK.	
Lambs, good to prime handy.	$7.25@7.60
Lambs, god to ch. hvy	675.@7.15
Lambs, fair to good handy	6.75@7.15
Lambs, clls	5.25@6.00
Wethers, good to choice	6.00@6.40
Wethers, plain to good	5.50@6.00
Yearlings, fair to choice	6.25@6.85
Ewes, good to choice	5.85@6.25
Ewes, plain to good	5.25@5.85
Ewes, culls	3.50@4.75
Bucks, fair to choice	4.50@5.50
WOOLED STOCK.	
Lambs, good to prime hdy.	8.15@8.65
Lams, fair to good	7.65@8.15
Lambs, fair to ch. heavy	7.50@8.25
Lambs, common to fair	7.40@7.75
Lambs, culls	6.00@7.25
Lambs, feeders and shearers	6.00@7.25

Wethers, plain to good	6.00@6.50
Ewes, fair to best	6.00@6.75
Ewes, culls	4.00@5.25
Bucks	5.00@6.00

BLACKSMITHS AND AUTOMOBILES.

To the Editor of The Homestead:

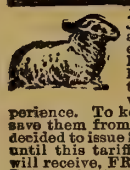
It seems that a reader of this paper who is a blacksmith has taken exceptions to what I wrote about taking automobiles to blacksmiths for repair, possibly, in the brief paragraph, I did not use the space to explain that there are blacksmiths and blacksmiths, and that some of them are fully competent to repair any machine that is brough to them, whether it be an automobile or a drag harrow. Of course, I have no word of objection against the work of any blacksmith. The average smiths works hard for what he earns and often does not get as much as he earns, but the particular point I wished to make—and I still wish it to stick—is the practice now quite common throughout the country of any and all blacksmiths, regardless of their ability, to set themselves up as automobile repairers. I know of any number of great failures and needless expenses piled upon auto owners by blacksmiths who have attempted to work on machines that were needed of repairs, and who knew not what they were doing when they took the machine down in an effort to remedy some supposed wrong. It is the great number of blacksmiths who pretend to know all about automobiles, but who really know very little about them, that I am speaking against. The auto owner cannot afford to let such men experiment at his expense, not only as regards his pocketbook, but his machine as well.

I can remember that a friend of mine once had his auto "go dead." He had not driven a machine long and did not pretend to know anything about it, but a blacksmith was handy, and he knew exactly how to fix it—to hear him tell it. The magneto needed attention, he said, so after the magneto he went. He took it off the machine, put it in such shape that it had to be sent to factory for repairs, when it came back in good shape and was just put on the car by a competent repairman it was found that still the motor would not run. A broken wire under the insulation was found, and this was the only trouble in the first place. I can relate a number of other instances of blacksmiths doing experimental work on autos that has proven mighty costly to the auto owner, such as the breakage of cylinders by rough work, getting carburetors entirely out of adjustment, etc. My friend speaks of blacksmiths making springs, of tempering steel and all that sort of thing. A good blacksmith can do all these things, but how many of the common country town blacksmiths are prepared to make a spring and temper it in oil, as the spring of an auto should be tempered to withstand crystallization for the longest possible time? How many of them really know steel, particularly of the various kinds found in even the medium-priced automobile? Some do, and I am glad that more are learning since the general advent of the auto, but what I would warn against is turning over a thousand or a two thousand dollar car to a blacksmith who really does not know what an auto repairman should know. I would rather they would go to school where the necessary knowledge can be obtained, instead of getting it a little at a time by experimenting on my car, at the rate of fifty cents an hour, and I stand the expense of all missteps.

Henry Hatch.

It is not exactly right that any one should drag the roads without pay, but no one is likely to make a complaint against the wrongdoer who commits the wrongful act.

How Will the Tariff Affect Your Wool?



Just now, as new tariff laws are about to be enacted, wool growers everywhere are asking us what will happen to the price of wool. Market conditions are so uncertain that these men want our advice. They want the benefit of our 47 years experience. To keep our 50,000 customers posted and save them from selling at the wrong time, we have decided to issue Special Market Reports right along, until this tariff agitation is over. Each customer will receive, FREE, a copy of each Special Report. But we aim to print, each time, only as many Reports as are wanted. If you, reader, want our Special Reports, we will be glad to send them to you free of charge, provided you let us know now, in advance. Please don't get the idea that this puts you under obligations to us. You are welcome to this service, whether you sell your wool to the Mills, through us, or whether you sell to wool buyers.

This is certainly a remarkable wool season, and no man with 200 pounds or more should agree to sell his clip until he knows "inside" market conditions.

WRITE! Merely send name on postal. That puts you on mailing list all season. Our next Special Report is just ready for mailing. If you rush your postal in today, you'll get it. (11)

S. SILBERMAN & SONS

Aug. 12, H. Fesenmeyer, Clarinda, Ia.
Aug. 13, J. W. Pfander & Sons, Clarinda, Iowa.
Aug. 20, Williams Bros., Villisca, Ia.
Sept. 3, W. E. Zimmerman, Neola, Iowa.
Sept. 17, L. R. McClarnon, Braddyville, Iowa.
Oct. 1, D. C. Lonergan, Florence, Neb.
Oct. 7, W. H. Cooper, Hedrick, Iowa.
Oct. 10, Williams Bros., Villisca, Iowa.
Oct. 11, Wigstone Bros., Stanton, Iowa.
Oct. 16, Harry Dodds, Florence, Neb.
Oct. 23, Ed. Seckington, North English, Iowa.
Feb. 4, W. H. Cooper, Hedrick, Iowa.

FIELD MEN.

M. T. White, western Iowa and Nebraska (north of the Platte river). Address 4015 Izard St., Omaha, Neb.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

A. T. Cole, Missouri, Kansas and Oklahoma. Address 3900 Holmes St., Kansas City, Mo.

John C. Halderman, Kansas. Address 4347 Harrison St., Kansas City, Mo.

A. W. Hopkins, Wisconsin. Address 201-202 Washington Block, Madison, Wis.

J. C. Price, southern and western Nebraska. Address 145 So. 23th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

Some good young Aberdeen Angus bulls are advertised for sale by H. R. Davis, Corning, Iowa, on page 31.

S. A. Wolcott, Gilmore City, Iowa, has two Shetland pony stallions, one two and the other one year old, that he is offering for sale in his advertisement on page 32 of this issue.

A. C. Orme, Nodaway, Iowa, advertises four Chester White fall boars and one July boar for sale on page 29. He also offers ten head of fall sows and he is pricing both boars and sows at $25 each if taken soon.

J. C. Porter, Ogden, Iowa, writes us that his fall pigs which he is now offering for sale are doing well. They are large, growthy, have lots of length, good bone and excellent quality. In order to get them out of the way for the crop of spring pigs, Mr. Porter is making some exceedingly low prices to quick buyers.

F. Bowman, Eldora, Iowa, recently advertised that he had for sale two Morgan stallions. Under date of May 9th he writes: "I sold one of the colts to Henry F. Townsend, Wilton Junction, Iowa, and the other to W. H. McClune, Dolliver, Iowa. I received inquiries from twenty-four parties in regard to them and from several different states."

In an advertisement on page 29 H. D. Clore presents the information that he has for sale a number of double standard Polled Hereford bulls. They are good yearlings sired by Polled King Le Roy, one of the best bulls of the breed. They are of the beefy type and have quality enough to suit discriminating buyers. Address inquiries to H. D. Clore, Norwood, Iowa.

L. L. De Young, Sheldon, Iowa, breeds Duroc Jersey hogs and advertises fall boars on page 29. He writes us that these boars are not fat, but that they are coming right along and in shape to do well for buyers. Most of them are sired by Crimson Advance 120601 and their dams are all gilt-edged breeders. He has also for sale a number of gilts and a few sows bred for fall litters. Mention this paper when writing for further information.

The advertisement of Joseph H. Dehner, Cascade, Iowa, offering some choice one and two-year-old Short-horn bulls for sale appears on page 30 of this issue. Mr. Dehner writes: "I have been breeding Short-horns for twenty-one years and never had a better lot of bulls than now. They belong to Generosity, Miss Ramsden, Mary Ann and Fashion families. They are sired by Beauty Baron 25081 and Victoria's Duke 351736. I will price them so as to move them."

Menaugh Bros., Gardner, Ill., are offering for sale several choice Polled Durham bulls as well as Duroc Jersey boars and gilts of any age. This farm can please you in either cattle or hogs of extra quality at reasonable prices. See page 31.

W. E. Prichard & Sons, Ottawa, Ill., report the sale to Alfred E. White, Bangor, Wis., of the imported Percheron stallion Konscrit. While not yet three years old this stallion weighed right at a ton at shipment, and is one of the big growthy kind, with the best of feet and legs. They consider him a very valuable horse in every way. Prichard & Sons still have some excellent bargains in Percheron stallions.

Gus Davisson, West Liberty, Iowa, is offering for sale four Duroc Jersey boars of August farrow that are of the heavy boned, lengthy kind and they are priced where any farmer can use them. These boars are sired by Col. Tyler, by W. K.'s Model, dam Miss Col. 2d, by W. T. Col. They are out of extra well-bred sows and for $30 each are bargains. See page 29 and write Mr. Davisson for any information you want mentioning The Homestead.

C. F. Adams, Owasa, Iowa, owner of one of the best herds of big-type Poland Chinas in the corn belt has over 100 spring pigs sired by some of the most noted boars of the breed. Mr. Adams has a herd of sows for size and smoothness and quality that are hard to equal. Mr. Adams will start an advertisement in The Homestead shortly and at that time we will give our readers more information regarding the good Poland Chinas to be found in his herd.

J. H. Nissen, Lyons, Iowa, the Hampshire breeder who won many important prizes last year at the leading state fairs, has a fine lot of spring pigs that will be in good shape for the trade this fall. Mr. Nissen has six July and August boars and some gilts of the same age, all of which are sired by Joe, first at the International, 1912, now owned by C. A. Brook, Washington, Iowa, and we want to say that these boars and gilts are the equal of anything in a long time and there is no question but what Joe is going to prove a great sire of show hogs.

Any breeder of Jersey cattle or farmer who wants to improve his dairy herd will be interested in the advertisement of the Mount Pleasant Jersey Farm on page 16 offering for sale a very fine two-months-old Jersey bull calf for the first check of $50. The animal is recorded and pedigree will be furnished upon application. He traces directly to Pogis 9th of Hood Farm and to Ch. Flying Fox. His dam is an excellent milker with a record of 500 pounds of butter. If further information be required write to Mount Pleasant Jersey Farm, Mount Pleasant, Iowa.

John Krebs, Riverside, Iowa, a Duroc breeder who has been making rapid strides in the improvement of his herd during the past three years has 110 fine pigs sired by Joe's Col., one of the very best sons of Proud Col. The pigs sired by this boar are showing up in fine shape and the writer believes Joe's Col. will prove equally as good a breeder as his noted sire. Mr. Krebs has two litters by Wonder's Model, the Iowa State Fair winner of 1912, and one litter by I Am A Crimson Wonder 2d, the great breeding boar owned by Swan & Ellis, Indianola, Iowa. Mr. Krebs will start an advertisement in this journal shortly when we will have more to say of his herd.

Carl A. Rosenfeld, Kelley, Iowa, has this season a fairly good crop of Poland China pigs and one which promises to develop into something fully as good as the sale consignment which was so remarkably successful last February. Mr. Rosenfeld has been unusually successful in the selection of breeding stock. He has used judgment in the strains involved and has had the faculty of retaining animals of the proper conformity that carry also quality and finish. The Rosenfeld farm is also the home of a herd of Aberdeen Angus cattle that would surprise many breeders of greater pretension. He has very quietly been gathering up and growing a herd which now produces twenty-five or thirty calves and they are a handsome lot. The herd will be represented at the Iowa State Fair this fall and the representation will be one that will wake up competition to the fact that Rosenfeld is in the ring. In particular he has one young bull that is going to push hard for high honors. A fat steer is also coming along in a gratifying way and will no doubt make a stir both at Des Moines and Chicago. Additional facts with reference to breeding will be given in later issues of this paper.

A. D. Freed, Kelley, Iowa, breeds Duroc Jersey hogs, and although he was one of those who last year suffered seriously from the attacks of disease, he has now a bunch of good pigs from matured sires and dams that make excellent promise for the future. They are the get of Royal Muncie and Research. Royal Muncie is a magnificent fellow by Muncie Chief. His dam was a daughter of the noted show sow, Violet Blossom. Research was by Muncie Chief and out of an Ohio Chief dam. The latter hog Mr. Freed would part with to someone who could appreciate a sire of his merit. Research is a big hog. He has a strong, widely arched back that would be striking in any show ring. He stands well on his feet, has big bone and every evidence of vitality and forceful breeding merit. He is just about two years old. As a herd-boar proposition this hog cannot well be beaten and while he might possibly not be classed as a show hog, he would certainly be able to take care of himself in any ordinary company. Mr. Freed will be glad to give our readers any further information that may be required concerning this animal. He has a right in any herd and many litters of his pigs may be seen on the farm.

The 1914 annual sale of Holstein cattle at the Idle Hour Place Farm of T. H. Russell, Geneva, Ohio, will be held April 29th and 30th, when 175 head will be offered to the public.

Can't Sag gates are built for use and ease of operation. They will turn any stock, can be handled by a small boy and are so cheap that no farmer should be without them. Read the advertisement carefully and write for their catalog and their prepaid offer. Address A. V. Rowe, president Rowe Mfg. Co., 496 Adams St., Galesburg, Ill. See page 23.

In an advertisement on page 20 Clark, the improved corn husker man, offers to send five samples of huskers, postpaid, at the low rate of $1.10. The Clark line includes an ordinary husking pin, a palm hook, a half glove husker, thumb hook and several other varieties, which include about all there is in the way of betterment of the husking peg idea. Send orders to Clark, 54 W. Lake St., Chicago, Ill.

The question of economical buying is one which is responsible for savings in most cases. In an announcement on page 15 the statement is made that in the ordinary purchase of lumber five middlemen obtain profits amounting to from 40 to 60 per cent of the cost. The Hewitt-Lea-Funck Company in their advertisement advise our readers that they are prepared to furnish lumber, mill work and Seattle silos direct from the forest with no middleman intervention and at a cost which eliminates all their profits. The Seattle silo, by the way, is a good one. It is made from clear fir, than which there is no better silo timber, has patent swinging, detachable doors and all the latest improvements. The manufacturers ask the privilege of quoting prices delivered at the railroad station of the buyer. They also want to give figures on their lumber and mill work. These may be secured by filling out the coupon in the advertisement and forwarding to the Hewitt-Lea-Funck Co., 480 Union Ave., Seattle, Wash.

Holstein Sale.

One of the big fall events in Holstein-Friesian cattle circles will be a combination sale at Painesville, Ohio, October 1st and 2d under the management of the Holstein Breeder Company, recently established at Geneva, Ohio. This concern which was organized for the purpose of conducting Holstein sales, compiling and printing catalogs, tabulating pedigrees, etc., is under the management of S. T. Wood, one of the best posted experts in the country, who knows practically all there is to know regarding Holsteins, and it goes without saying that the fall sale under his management will be a complete success in every way. If there is any information regarding Holstein cattle that is desired by any reader of this paper we advise them to write to Mr. Wood at Geneva, Ohio, and the information will be forthcoming.

James' Sensational Pig Bargain.

On page 29 J. O. James, Braddyville, Iowa, begins his advertisement announcing his sensational pig bargain campaign. He is now booking orders up to 100 head of spring pigs of both sexes from his noted big-type Poland China herd, which is one of the most noted in western Iowa. These pigs are sired by the half-ton boar, Big Orange, Ott's Big Orange, who weighed 700 pounds at nineteen months old, Big Sensation, Big Orange's King, A Wonder Giant and Gritter's Best. These pigs are out of 700 and 800-pound sows sired by Big Orange, Big Sensation, Pawnee Nelson, Long King's Equal, Big Ex and Longfellow Jr. Some of the most sensational herd boars throughout the East and the West today are out of the James herd and as he says in his announcement you can save from $100 to $150 by buying these pigs now. He is pricing these pigs at $25 to $35. He is booking orders for pigs of both sexes and the sooner you send your order the better. Send your description of pig at once, accompanied by draft and he will make the selection and he guarantees description as represented. Here is the opportunity for you to buy and save money. Write J. O. James at once as the early bird always catches the worm. When writing him kindly mention The Homestead.

Double Champion Duroc Jersey Blood.

A representative of The Homestead last week called on S. P. Freed, Ames, Iowa, whose herd of Duroc Jersey hogs has nearly every year shown its merit by winning championship or other prominent prizes at the Iowa State Fair. Mr. Freed still maintains at the head of his herd Freed's Col., a hog which has to his credit championship and grand championship honors at the Iowa State Fair and which has also developed into a breeder of more than ordinary prepotency. Freed's Col. is a healthy, thrifty, husky fellow now and really better than ever before. Mr. Freed has also in service Wonderful Crimson Again, a son of the grand champion Crimson Wonder Again and carrying, therefore, a strain of blood which has been dominant in many state fair champion winners. Mr. Freed's crop of pigs, while lacking perhaps a little from his usual number, is of good character and needs only time for splendid development. The dams of these pigs are also of choice breeding. A number of them are by Freed's Col. and quite a number of the other sows are by Manley Orion, a hog of great size that had to his credit five successive years as a prize winner at the Iowa State Fair. At the present time Mr. Freed has on hand and for sale several extra good fall boars, three or four of them by Freed's Col. He has also a fall boar by Golden Model 2d that he would dispose of to an appreciative buyer. This fellow has some show yard promise as he is strong at those points which made his sire a noted character. Any farmer or breeder who is interested in fall boars would do well to write to S. P. Freed, Ames, Iowa, for further information.

The Jack Rabbit Car.

For twenty years the good, old Apperson Jack Rabbit car has been in service and in all that time it has rendered absolute satisfaction to users. This car is advertised on page 21 as the life-time car, and that is what car buyers who want service are looking for. It is withal a good looker with its durability and other good qualities. Read the advertisement carefully and then write for additional particulars to Apperson Bros. Auto Co., 319 Main St., Kokomo, Ind.

Aberdeen Angus Bull Sale.

G. W. Dalgetty announces in an advertisement on page 29 that on May 17th at Corning, Iowa, he will make a public sale to include six choice young Aberdeen Angus bulls and one herd bull. The latter is Coldbrook Eric 138785, a proven breeder of excellent character and a desirable bull for anyone. The young bulls are sired by Coldbrook Eric and belong to the Nosegay, Queen Mother and other families. They are coming yearlings. Don't forget that the sale takes place on next Saturday, May 17th.

Bay's Short-horn Sale.

Wednesday, June 4th, John M. Bay will make his first public sale offering from his Sunny Slope herd of Short-horns at Aledo, Ill. Forty head, thirty females and ten bulls have been cataloged for this event, and the cattle are a class that will please the buyer. Mr. Bay is a thoroughly capable cattleman of many years experience, has been a judicious buyer and in the coming sale will present a lot of cattle that will be a credit to him. One-half the offering is of straight Scotch breeding and the balance Scotch topped in the best American foundations. The sale will be held in Aledo, so it will be easy of access and further particulars will be given next week. Application for catalog should be filed with John M. Bay, Aledo, Ill. Kindly mention The Homestead when you write.

O. C. Cowel's Polands.

A Poland China breeder that is assembling a lot of good stuff is O. C. Cowel, Hebron, Neb. Mr. Cowel the past season purchased some of the very top sows sold in Nebraska and his herd was already made up of choice stuff. One sow added to the herd was a daughter of the great Centennial and was bred to Big Victor when purchased. Her dam was one of the very best of the Higgin's herd and was sired by Blue Valley Exception. Another big sow and one of the tops of Kuhl's sale was Bess by Chieftian by Chief Tec. 4th and out of F.'s Giantess by Big Price. Mr. Cowel has a herd boar that is sure the making of a big one. He is O'Columbus by the many times champion, Columbus, and out of the grand breeding sow Peter's Lady by Peter the Great by Big Bone. This line of breeding should show up something very choice and there is no line of stuff any bigger.

Wigstone Bros.' Big-Type Polands.

Among the many good big-type Poland China herds today in the West, one that stands out prominently among the rest, is that of Wigstone Bros., Stanton, Iowa. For many years these gentlemen have been building up a strictly big-type herd, and two years ago they showed at the Iowa State Fair where they made a sensational killing with their big hogs. Theirs was one of the first of the big-type herds shown at Des Moines and they came away with their share of the ribbons. The boar at the head of their herd at that time was Prospector 2d, and he stood at the head of their winning herd at Des Moines. He sired them some splendid things and many good herd boars today in well-known herds are sired by him. Later came Big Jones 3d, a Mouw-bred boar, and he also proved a great breeding boar. Last fall they secured at a long price the noted boar, Chief Price Again 2d, that won third prize at Des Moines and he weighed 1,027 pounds at that show. He is one of the largest and best boars today in the West, and he is proving a splendid sire. He is a son of old Chief Price Again and he is out of Lady Jumbo, by old Long Chief, and he therefore descends from the most noted large--type breeding on both sire and dam side. They have 100 head of spring pigs this year sired by Chief Price Again 2d, Big Jones 3d and W.'s Wonder. They look well at this time of the year, have all kinds of size and if nothing happens they are going to be right for the trade the coming fall. Among their many good litters is one of seven pigs out of Mammoth Lady that were farrowed January 25th. This sow was in their second-prize herd at Des Moines in 1911 and she is not only the largest, but she is one of the best sows in their herd. There are three boars and four sows in this litter and they were sired by Big Jones 3d. The best young sow on the farm is out of this sow and no one has a better one. These pigs are large and are splendid prospects for the fall trade. Giantess B., a daughter of old Major Nelson, out of Giantess A., fourth-prize Iowa State Fair sow, has twelve good pigs by Chief Price Again 2d. Another splendid litter by Chief Price Again 2d out of Mastodon Lady 2d, are looking fine. This is an April litter and she is raising eight and while they are not as early as some of the others, they are nevertheless very good. They have other splendid litters and a lot of good pigs, and they are going to have a lot of good things for the trade the coming season. They will make a sale October 11th, at which time they will offer a great lot of boars and some of their best sows, and they expect to make this one of the greatest offerings that have ever come from their herd. When visiting western Iowa herds this summer breeders should make it a point to see the Wigstone Bros.' herd

and we will assure you you will see one of the best herds in western Iowa.

Insull Buys Trumans' Hackneys.

Manager J. G. Truman of the Pioneer Stud Farm, Bushnell, Ill., writes: "We are pleased to report the sale to Samuel Insull, Hawthorn Farm, Lake county, Ill., of the imported Hackney stallion Tollington, and the imported Hackney mares, Nene Lady Gay, Lyndhurst Peggy and Sthoreen Bawn, together with an outstanding young imported Hackney pony stallion. Tollington will be remembered as one of the greatest Hackney stallions in America, having won first and champion prizes at the leading state fairs and shows of the West. Nene Lady Gay has also been a very noted prize winner, having won first and champion prizes at practically the same shows as Tollington. She has the same sire as Tollington in Middleton King, a horse that was imported to this country and shipped back to England, where he is proving one of the greatest sires in that country. Sthoreen Bawn will be remembered as the black and white pony shown by us for several years. She is also a noted prize winner on both sides of the ocean and is considered one of the most beautiful specimens of the Hackney pony in the country today. Lyndhurst Peggy was shown by us at the last International. She was shown with great success in harness classes at the Olympia (London) show and is an outstanding high-class pony. The breeders in the vicinity of Lake Forest and Libertyville are to be congratulated upon having Tollington at their disposal." See page 32.

John Lawson's Poland Chinas.

The other day we visited the herd of John B. Lawson, Clarinda, Iowa, and we saw there one of the best crops of spring pigs that he has ever had at this season of the year. He has 154 head and they are sired by old Long King's Equal, the boar that weighed 965 pounds on the scales in the presence of forty breeders a year or more ago, and A Wonder's Jumbo. It is unnecessary to say much about the former boar as everybody knows of him, but we want to say a word for the latter hog at this time. He is a son of old A Wonder and he is out of that grand brood sow, Lady Jumbo 1st. This boar has made a remarkable improvement the past year, and he now takes his place among the right top herd boars in western Iowa. His pigs have always been good, both in the Lawson herd and in other herds where sows have gone, and it now looks like Mr. Lawson is going to have another great breeding boar in this hog. One of the best sows he has is a full sister to this boar and she has a splendid litter by Long King's Equal. He has a litter of ten by old A Wonder out of Nelson Superior 4th that are looking good and he is going to make these go some before the season is ended. He has eight head of A Wonder sows in his herd, and most of these have litters this spring by Long King's Equal and here is a cross that has always proved out right. A selection of a spring boar from some of these matings would be the right thing now for the man that is going to want to buy a boar this fall. You can buy them cheaper now than you can later in the season. He has an August boar now on the place that he is growing out for himself and he is a good one. He is sired by Long King's Equal and he is out of an A Wonder dam, and he is bred practically the same as that sensational young boar, King of Wonders, in the Pfander herd. Mr. Lawson has a great outlay for this season and he will have something to say to readers of this paper a little later in the season. If you write him about a boar pig now kindly mention this paper.

Pfander's Poland Chinas.

Last week we visited the herd of J. W. Pfander & Sons, Clarinda, Iowa, and found them caring for 120 spring pigs together with a lot of fall sows. They have three or four good A. Wonder fall boars on hand and these are the only things they are caring to sell just now. Their spring crop is sired by old A. Wonder, King of Wonders, Big Ben, Big Jumbo 2d and Big Defender. That young boar, King of Wonders, is one of the really great young big-type boars of the breed today. If you do not believe it just make it a point to visit the Pfander herd and you will say he is one of the greatest young boars you have ever seen. He weighed 622 pounds at fourteen months and he should make one of the largest boars of the breed. While looking him over and at the same time get your eye on Big Ben and you will say he is some boar too. They have a great litter of nine by old A Wonder and these are out of Lady Giantess 2d by Long King. They will sell five of the boars in their August sale and they will make sale toppers. Another great litter they have is sired by Big Ben and they are out of Mammoth Giantess Equal, one of the largest and one of the greatest big-type sows now living. The dam of King of Wonders, that great young boar referred to above. This litter came February 10th and they will sell two of her boars and one of her sows in their August sale. They certainly ought be some competition on these pigs at that time. This sow weighed 700 pounds at two years of age. They have other very choice litters that they are growing out well, and they will have a choice offering for their August sale. They just received a letter from Richard Burns, Saxon, Mo., saying that the sow Pawnee Belle that was No. 2 of last years sale, farrowed him ten pigs and is raising eight and he says this is the best litter he ever saw in any herd. This sow sold for $330 and was the top of their sale and they are pleased to learn that she has done so well for him. Just another word about King of Wonders and that is his pigs are showing up fine and he is going to make an excellent breeding boar. We will tell you more about their herd later in the season, and remember their August sale when the tops of these are going to be sold.

McCandless' Hampshires.

Anyone wanting a fall boar should write E. S. McCandless, Thurman, Iowa, as he has four good fall boars that he is offering for sale and they are all sired by Signet, the first-prize boar pig at the International in 1910. He will sell these at any time. His spring pigs are all sired by Signet and Pat Brady, the latter being a Messenger-bred boar. Later in the season he will have some good spring boars to offer the trade and also some sows. If you want one of these boars write him at once and kindly mention The Homestead.

Martin's Scotch Collies.

One of the greatest aids to the modern farmer and stockman is a good Scotch Collie. It is a dog of this kind that will perform quickly and intelligently hundreds of little chores about the farm or ranch that would otherwise place an increased burden on the owner. This is an age of eliminating unnecessary cost of operation to any businss enterprise and a factor of no small importance along this line is the good Collie. Stockmen that are making a success of the business would consider it sheer folly to keep other than the best horses, cattle or hogs, yet they are content to keep the worst kind of a cur dog about the place. Interested parties will find good Collies on the farm of A. A. Martin & Son, R. F. D. 4, Box 107, Lincoln, Neb. Mention The Homestead when you write.

Williams Bros.' Poland Chinas.

One of the firms that is right this spring with a good crop of pigs is Williams Bros., Villisca, Iowa, and they now have 300 head on hand. Many of these are sired by old Pawnee Nelson and others by their Sampson boar. Their pigs are doing well and the boys are going to have something out of the ordinary for their fall trade. They have several litters by the young boars they are now using, so that they have pigs that are not related to those they have sold befo e. Later in the season we will have more to say about the Williams Bros.' herd, and we will now say to those who may visit southern Iowa herds that they should not overlook the Williams Bros., as they will show you some of the best boars and as good a bunch of brood sows as you will find in the state.

Geo. Hassler & Son's Red Polls.

It is no small honor to anyone to breed up a good herd of any kind of live stock, but when it comes to building up as good a herd of cattle as is the herd of Red Polls owned by Geo. Hassler & Son, Holbrook, Neb., we must say the builders are not very plentiful. These gentlemen have been showing these cattle the past three or four years and have been persistent winners at all the state fairs of the West. The great breeding and show bull, Teddy's Best, is doing service in the herd today. He has sired much of the best of this and other herds and is a winner of champion honors himself. One of the best yearling bulls the writer has seen in a long time is in this herd. He is by Teddy's Best and out of the great breeding cow, Juniata. This bull will probably be seen at the fair this fall and he is going to make some one some mighty interesting competition for the head of the yearling class. A full brother to him will be seen in the calf class. A few very choice bulls and a limited number of females are for sale. When you write kindly mention The Homestead.

A Necessary Household Article.

The Enterprise meat and food chopper has been advertised in these columns from time to time for many years. It has merits which justify its use in every farm kitchen. The engraving which appears herewith shows an Enterprise chopper as used in the preparation of New York hash. This hash is made as follows: To every cupful of chopped cooked meat, take two cupfuls of cold boiled potatoes, chopped medium fine; one-half cupful of boiling water or stock; two tablespoonfuls of butter; season to taste. Put the water and butter over the fire and when the water is boiling again, add the meat and potatoes. Use an iron saucepan or

spider. The difficulty of making good hash lies in the cooking, for it must be stirred, yet not too much, or it will be pasty. The water should boil away, yet the hash must not be dry, nor yet watery. Let it cook, stirring occasionally, until there is a coating on the bottom of the pan from which the hash can be freed without sticking. The recipe is taken from a new edition of "The Enterprising Housekeeper," a book which includes more than 200 recipes of like value. The book is ordinarily sold at twenty-five cents, but readers of this paper may obtain it by sending four cents to pay postage. Address all requests to Enterprise Mfg. Co., Philadelphia, Pa.

Harris & Sons Sell Herefords October 22d.

O. Harris & Sons, Harris, Mo., claim October 22d for their annual sale of Hereford cattle. These gentlemen will this year put up an offering superior to any they have ever made. Their noted show bulls, sires of the young herds that were undefeated in 1912 are the sires of a string of cattle Harris & Sons are pleased to say are the best they have ever produced, and in this sale they will sell cattle bred as were the winners.

High-Class Fall Boars.

On page 29 A. H. Windom, Nodaway, Iowa, begins an advertisement for twelve high-class Poland China fall boars and these are good enough to head any herd. In fact, these are among the best Poland China fall boars we have seen on our travels this season and they are all sired by the 950-pound boar, Pawnee Nelson. Few boars in the West have a better reputation as individuals or as sires than has Pawnee Nelson. This boar is a son of old Pawnee Lad and he is out of that famous old brood sow, Anna Price II. He has been one of the remarkable breeding boars of the West and these fall boars that Mr. Windom is offering are good enough to go anywhere. If you want one he is pricing them at $40 and $50 and the first man that gets his checks there will get the pick. Write him at once and mention The Homestead.

Entries Wanted for Angus Sale.

M. A. Judy, West Lebanon, Ind., wants some more entries for the combination sale of Aberdeen Angus cattle that he proposes to hold at Chicago, June 18th. There could be no better time than the present to sell cattle. The successful outcome of the spring bull sales held recently under the management of the Aberdeen Angus Association gave striking evidence of the strong demand for this great beef breed, and those with a surplus of cattle to sell will do well to correspond with Mr. Judy who has wide experience both as a breeder and a sale manager. He reports that he has nearly enough cattle to fill the sale list, but would like a few more entries. Some of the best breeders in the country are contributing cattle to this sale. Mr. Judy will be glad to send full particulars to those who will write him at once at West Lebanon, Ind.

Dispersion of Sayer Short-horn.

As previously announced in these columns the entire herd of Short-horns owned by George J. Sayer, McHenry, Ill., has been purchased by Thos. Stanton, who will offer fifty head of the tops at public sale at his Sittyton Grove Stock Farm, Wheaton, Ill., Friday, June 3d. In many respects this will be one of the most remarkable lot of Short-horns offered at a public sale in years. Six bulls are listed, including the International champion, Roan Sultan and White Star, in addition to which Mr. Stanton has decided to sell his bull Browndale Sultan. The female partion of the offering includes the show cows, Fair Start, with bull calf at foot by Roan Sultan; Queen Mildred, the two-year-old show heifer Sayer's Georgia, by Roan Sultan 78th; Duchess of Gloster by True Cumberland, Sittyton Fashion by Leader of Fashion, the senior yearling Sittyton Anna and some junior yearlings. In addition there will be the top breeding cows of the Sayer herd, six choicely bred Augustas, one to six years old. Fifteen cows will sell with calves at foot. More particulars regarding this sale will appear in the next issue. In the meantime write for a copy of the catalog to Thos. Stanton, Wheaton, Ill., mentioning The Homestead.

Windom's Poland Chinas.

One of Iowa's breeders who has a lot of good pigs this spring is A. H. Windom, Nodaway, and the most of these are sired by old Pawnee Nelson and Progression, the latter boar being a son of old Panorama, a boar that won renown in the West. Quite a few of these pigs are out of Pawnee Nelson sows, in fact, the most of those that are sired by Progression. Mr. Windom has a new boar this spring that he is growing out for his own use in case that the others go wrong or get too old to breed. He calls him Windom's A Wonder and he is a son of Fesenmeyer's old A Wonder and he is out of a grandam of Ellerbroeck's A Wonder on the dam's side. He is, therefore, a line-bred A Wonder and he has all the characteristics of a big boar when matured. He bought this boar from Art Stanley, Sheridan, Mo., and he in turn bought a sow bred from Henry Fesenmeyer. Mr. Windom will make a public sale of forty head of boars and sows on August 19th, and he will list quite a number of his very best Pawnee Nelson boars and sows for this occasion. Just now he is offering twelve head of good fall boars for sale and these are all sired by Pawnee Nelson. Some of them are out of old Columbia, a Harvey Johnson-bred sow, others are out of Giantess May, a Giantess sow, and others are out of a Mouw-bred sow and a Memorandum sow. Another good fall boar is sired by Progression and he is out of a Mayflower sow. Any of these boars are good enough to head herds and he is pricing them at $40 and $50. When writing him kindly mention The Homestead.

Choice Shetland Ponies.

One of the best lots of Shetland ponies that the writer has seen for some little time we saw a few days ago on the farm of C. S. Bratt, Arapahoe, Neb. An imported stallion that is thirty-four inches high and weighs 2,250 pounds is one of the very best stallions we have seen in a long time. He is good and thick and with extra good hocks and feet. He is a breeder of the right sort as shown by his colts now on the place. One extra good stallion is by this imported horse and out of one of the best thirty-eight-inch mares anywhere in the country. He is priced well worth the money as are several others. For full prices address mentioning this paper, C. S. Bratt, Arapahoe, Neb.

Stallion Bargains at Watseka.

Oltmanns Bros., Watseka, Ill., still have some outstanding Percheron and Belgian stallions in their barns, and buyers who have not yet secured their horses for the coming season will do well to look over what they are offering. These horses all came over early in the winter, so that they are thorough acclimated and conditioned, are the rugged, growthy, cordy legged kind, bred in the best blood known to the breed, and will be priced at figures that should move them at once. Oltmanns Bros. have a reputation for giving customers excellent values for their money, and always live up to the letter of their agreement. Get in touch with them at once if you are in the market for a reliable horse. Their advertisement will be found in next week's issue.

Dunlap's Mule-foot Hogs.

Mr. John H. Dunlap, Williamsport, Ohio, owner of the Ohio Blue Ribbon herd, was not affected by the recent disastrous flood in Ohio which caused so much loss of of life and property. He reports a big demand for mule-foot hogs. While this breed has not been before the public as long as the other breeds, it has been in existence for centuries, and is very prepotent, as well as being able to resist disease. Mr. Dunlap reports tests made in many different states with stock from his herd, in which the mule-foots lived and the other hogs were lost. Mr. Dunlap has always been able to sell all the good mule-foots he can raise. He now has over sixty brood sows on his farms that farrow twice a year. These sows were selected on account of their size, hardiness, and because they have farrowed and raised large litters. Many of the spring pigs are now weaned, and are being shipped nearly every day all over the land to form new herds. There are ten big prize-winning herd boars in the Ohio Blue Ribbon herd, and anyone wanting to make a start with this great breed which Mr. Dunlap has so successfully brought to the notice of the swine breeders of the country, can do so without getting inbred stock. No other breeder in the land has made such a record at the state fairs as has Mr. Dunlap, who has won nearly every prize he has ever compete for in the show ring.

McClarnon's Poland Chinas.

The spring crop of pigs looks good this season on the farm of L. R. McClarnon, Braddyville, Iowa, and he has 135 head. If nothing goes wrong he will be in right for the fall trade and he will have a right choice offering for his September sale. The McClarnon herd has long since been regarded as one of the best in southern Iowa and he has sent out a lot of good hogs from his herd. His present crop is mostly sired by Big Orange and Colossal. He has a lot of good fall sows on the place and these are being grown out for future sales. Mr. McClarnon has a high-class lot of brood sows and they are doing well by him this spring. He has a good litter by old Big Orange and these are out of a Peter Mouw sow. The dam of this litter was the top gilt in Mouw's last sale and the pigs should be sought after by breeders later on. A litter of eleven by Colossal out of a Big Orange sow is among the oldest pigs he has. These came January 14th and are doing fine. He has three good litters by Colossal out of A Wonder sows and three good Colossal litters out of daughters of Big King. He has a litter of eleven by Colossal out of Beauty's Jumbo, one of his largest and best sows, and he expects to make them good by fall. Mr. McClarnon will make a September sale at which time he will offer the tops of his herd and you can put it down he will have something good to offer the boys. Later in the season we will tell you more about his herd.

The Holbrook Angus Sale.

P. J. Donohoe, Holbrook, Iowa, and Wm. Cash, Williamsburg, Iowa, will hold a sale of sixty high-class Aberdeen Angus cattle at the Holbrook sale pavilion on May 27th. There will be about ten bulls and fifty cows and heifers. This is a very important event to Aberdeen Angus breeders as the men who are making the sale have enviable reputations as breeders and feeders of the highest type of Aberdeen Angus. The high average of prices that bulls have been bringing this year, both publicly and privately, should serve to make high-class females bring good prices during the next few years. The best indication of continued high prices in pure-bred beef cattle is the fact that there is such a strong demand for good bulls at prices which prove profitable to the breeders. No better bred lot of cattle could be gotten together than those to be sold at Holbrook on May 27th. Blackbirds, Ericas, Queen Mothers and Prides make up the offering. The sires represented are many of the greatest bulls the breed has produced in recent years such as Black Woodlawn, Prince Ito, Erwin C., Black King of Homedale, Black King of Woodlawn and many others that are well known as great sires and show bulls. Just as this season of the year is a most opportune time to buy breeding cattle as pastures are at their best and cattle require very little care until snow flies This offering is in excellent condition for their future usefulness as breeders. Many are the prize winners that have been produced in the vicinity of Holbrook and to the man who is just starting in the pure-bred Aberdeen Angus business we can strongly recommend this sale as an excellent place to buy high-class females for a founda-

J. O. JAMES' SENSATIONAL PIG BARGAINS

I WILL book orders up to 100 head of spring pigs sired by my half-ton, **Big Orange, Ott's Big Orange,** who weighed 700 pound on the scales just turned 19 months. **Big Sensation, Big Orange's King, A Wonder Giant** and **Gritters' Best.** All strictly big-type boars and out of extra big, long, heavy-boned matchless sows, many of them weighing from 700 to 800 pounds. These sows averaged 9½ pigs to the sow, many of them 10 to 13 pigs. I want you to write, describing just what you want. It makes it easier to pick the pig that will suit. I am pricing these pigs low for quick sale for June delivery, or at weaning time, for orders booked during May, or while they last, **$25 to $35.** Must be bought during this month to get this price on them. Many of these pigs will be worth $100 to $150 by October. You can save from $75 to $100 by buying now. The early buyer catches the bargains. The dams of these pigs are sired by Big Orange, Big Sensation, Pawnee Nelson, Long King's Equal, Big Ex and Longfellow Jr. You can't beat sires, dams, pigs or prices. We guarantee our pigs to be as represented. Let me hear from you at once as orders are coming fast. Mention Homestead when writing. **J. O. James, Braddyville, Iowa.**

tion of a good herd. When you buy the class of cattle to be sold in this sale you will not need to start in the business the second time in order to get what the public demands, namely, good cattle and good pedigree. See the advertisement on page 30 and arrange to attend the sale. Write Mr. Donohoe for a catalog, mentioning The Homestead.

Mrs. Stickel Iceless Refrigerators.

Some time ago the editor of the Home Department of this paper offered a prize for the best article on a household necessity. The reward was given to Mrs. Mary J. M. Stickel, who wrote with reference to the iceless refrigerator she was using in her home. We have since learned this iceless refrigerator is the one manufacturered by the Iceless Refrigerator Company, 6981 W. Ohio St., Chicago, Ill. An advertisement for this company appears on page 25 of this issue. We would suggest that our readers who want such convenience as was described by Mrs. Stickel look up the advertisement and write for a catalog. We can recommend this machine to be made of good material and the company to be honest and reliable.

Killing Lice and Mites.

Now that warm weather is approaching lice and mites may certainly be looked for with their usual devastating effect on chickens. Science and investigation have been busy in the preparation of lice killers, with the effect that some highly effective preparations are now in the market. The latest of these is Licecil Compound, an advertisement of which will be found on page 10. This is simplicity itself in its application, as all that is necessary is to hang the bottle in the coop, when the vapors leaving it settle in a misty form, penetrating feathers, cracks and crevices and proving sure death to lice and mites. There is no spraying, painting or dusting. A free circular which tells all about it may be obtained by writing to Metzger Company, No. 79, Quincy, Ill.

Fesenmeyer and His A. Wonders.

The other day when we visited the herd of Henry Fesenmeyer, Clarinda, Iowa, and he had 110 spring pigs, and nearly every one of them wa ssired by old A. Wonder and Big Joe. Old A. Wonder is possibly the best advertised big-type Poland China boar living today and he certainly has been a great boar in his time and he looks good for many years to come yet. That boar Big Joe is a comer and he is as large as any of them for his age and we never saw a big-type hog that stood on better feet. His get in the last Fesenmeyer sale were of the sensational order and the way breeders went after them was a caution. Old A. Wonder weighed 984 pounds last winter the day of his sale and that is certainly some boar. He was weighed in the presence of the breeders attending the sale, and it is seldom indeed that you see a boar tip the scales at that weight. Mr. Fesenmeyer is going to make a sale on August 12th, at which time he is going to sell his very best boars and at the same time he will sell a number of A. Wonder sows bred to Big Joe and vice versa. That he will have an offering that is worth going to see you will all admit, and he never fails to put them up right when sale time rolls around. His last winter's sale was the sensational sale of the winter, and he says his forthcoming offering will be another that will make all the boys sit up and take notice. Just put it down that you are going to attend his sale on August 12th, and if you want to get into the bandwagon buy one of those A. Wonder sows bred to Big Joe, or buy a Big Joe sow bred to A. Wonder. He just received a letter from a man while we were there in which he told of a Big Joe litter that he had and he thought them the best in his state. So you can see his Big Joe boar is coming right to the front as one of the great breeding boars in western Iowa.

THE HORSE HOLDS ITS OWN.

James King, dealer in horses, who started in life without a penny and who today conducts one of the largest business of its kind in the country, believes Charles Dickens and the author of "David Harum" did a grave injustice to men of his calling, says the Baltimore Sun.

"There is no place that I know of where a man can go and get fairer treatment than at a horse auction," Mr. King says. "All the old-time tricks and methods that the public has been led to believe by such writers as Dickens are looked upon as jokes by the present-day dealer in horses. There is no class of men who decorate their goods less than dealers in horses. Their goods are sold in the rough with all the good or bad points described and pointed out the time of sale.

"The motor car has not injured one feature of the horse inasmuch as the coach horse business was never a very profitable one. Makers of coaches and coach harness have been hit hard, but they have gone into the motor car business in most cases. I was in New York the other day and I noticed at least 15 per cent more coach horses on Fifth Avenue than I have seen in the last five years, and I am a regular visitor there.

"I am satisfied, however, that the coach horse will never come back to where he was in numbers. When I say coach horse I mean a coach horse and all that goes with it, not a bakery or milk wagon horse, or what should have been a street car horse, with its tail cut off. The coach horse is scarcer and is bringing more money today than ever before.

"I am not alarmed about the motor truck, because I look upon it as an assistance to the horse. When I was a boy all work was done by hand, now it is most all done by machinery, and farm labor is harder to get and more expensive than ever.

"The steamship, the engine, the telegraph and the telephone have not reduced the necessity for help one iota. To the contrary, it has increased the demand. So it is with the horse. He is constantly on the increase for the number of uses that are arising. Some folks lead themselves to believe that the horse is passing. That's true, he is passing to the front every day.

"Here's my toast to that noblest of animals—the horse:

Here's to that bundle of sentient nerves, with the heart of a woman,
The eye of a gazelle, the courage of a gladiator, the docility of a slave,
The proud carriage of a king and the blind obedience of a soldier,
The companion of the desert plain, that turns the moist furrows,
In the spring, in order that all the world may have abundant harvests,
That furnishes the sport of kings, that with blazing eye and distended nostrils
Fearlessly leads our greatest general through carnage and the smoke of battle,
To glory and renown, whose blood forms one of the ingredients that go
To make the ink in which all history is written,
And who, finally, mutely and sadly in black trappings pulls the humblest
Of us all to the newly sodded threshold of Eternity.

NEBRASKA LIVE STOCK MEN MEET.

On May 29th the Live Stock Producers of Nebraska will meet at the State Agricultural College Farm, Lincoln, Nebraska, to discuss the beef-producing situation and inspect the experimental cattle.

The cattle used in experimental work during the past winter were common range cattle purchased in the Omaha yards the first of last November. The first forty-five days, or until December 15th, the steers were fed a light feed of corn along with silage and alfalfa hay for roughage. On December 15th they were put on the following rations:

Lot 1—Corn, prairie hay and cottonseed meal.
Lot 2—Corn, silage and cottonseed meal.
Lot 3—Corn, silage and priairie hay.
Lot 4—Corn, silage, heavy, and alfalfa.
Lot 5—Corn, silage, medium, and alfalfa.
Lot 6—Corn and alfalfa.

After years of experimenting, the Nebraska station feels certain that on the average and under Nebraska conditions alfalfa hay furnishes the cheapest source of protein when fed with corn along with limited quantities of corn stover, straw or prairie hay. The advent of silage as a prominent fattening feed raises a question as to the cheapest source of protein when silage forms a considerable part of the ration, and also raises a question as to the right amounts of silage and alfalfa to feed along with corn for best results. The foregoing experiment was planned for the purpose of determining these points. Everyone, whether living in Nebraska or elsewhere, interested in beef production is cordially invited to be present at this meeting.

Ask your neighbor to subscribe for The Homestead.

W. H. COOPER, LIVE STOCK AUCTIONEER

WE maintain one of America's greatest herds of strictly big-type Polands with big-type blood lines. We have in connection with it, one of the most complete plants for the business known. Twenty sows in our herd average over 650 pounds each including several yearlings.

50 HEAD OF BRED SOWS AVERAGED $65.00 in our February 4th sale, mostly gilts. We are booking orders now for June delivery, gilts and boars of this spring's farrow, at $20.00 and $25.00 each, out of these sows, which are of the biggest blood lines known, and sired by our big herd boars, including the great Big Expansion, weighing 800 pounds at two year old, and Big Bone 2d, and other boars of like breeding. Can furnish boars and gilts unrelated. Guarantee everything as represented or it may be returned and money refunded. Everything recorded free to purchaser.

W. H. COOPER, HEDRICK, IOWA.

BIG BONE 2d 161497.

TO ABERDEEN ANGUS BREEDERS AND FARMERS:

REALIZING that there is a strong demand for really high-class Aberdeen Angus cattle, Wm. Cash, of Williamsburg, Iowa, and I are listing some of the very best bulls and females we own for our sale at the Holbrook Sale Pavilion, Holbrook, Iowa, Tuesday, May 27, 1913. The female end of the offering is especially strong and no man can say we are not listing cattle as good as can be bred. The offering consists of Blackbirds, Trojan Ericas, Queen Mothers and Prides sired by such bulls as Black Woodlawn, Prince Ito, Black King of Homedale 2d, Erwin C, Black King of Woodlawn and others. We appeal to new breeders to attend this sale and get some of this good seed. Come to Parnell, Iowa, (Located on Marion-Ottumwa branch of C. M. & St. Paul R. R.) where you will find free transportation to Holbrook. Write me for a catalog at once mentioning The Homestead.

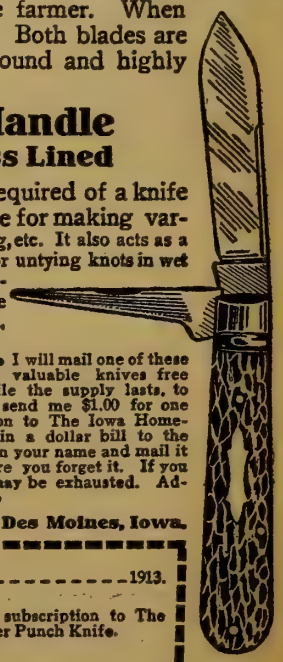
THIS KNIFE COSTS MY READERS NOTHING

You have read about the famous Leather Punch Pocket Knife—the knife that is called the "Marvel of Mechanical Ingenuity"—the only knife that was ever made especially for the farmer. When opened it is six and one-half inches long. Both blades are of finest tempered tool steel, perfectly ground and highly polished. The knife is complete with



Best Quality Stag Handle
Securely Riveted and Brass Lined

The large blade fills every common use required of a knife while the leather punch blade is indispensable for making various sized holes in leather for buckles, rivets, belt lacing, etc. It also acts as a swedging awl or marlin spike when turned to the left. For untying knots in wet rope and hard leather this blade has no equal. While possessing all these valuable features, the knife is no more clumsy or awkward to carry than an ordinary pocket knife.

My Guarantee I am so sure that this knife is all I claim for it that I am going to place a gilt edge guarantee on it. Send me $1.00 for one year's subscription to The Iowa Homestead. I will mail you a knife free. Try it for ten days. If it is not just what I claim it to be, you can return it to me and I will refund your money. You take no chances.

My Offer I will mail one of these valuable knives free and prepaid, while the supply lasts, to anyone who will send me $1.00 for one year's subscription to The Iowa Homestead. Simply pin a dollar bill to the coupon below, sign your name and mail it to me today before you forget it. If you wait my supply may be exhausted. Address all orders to

HOG FARM EQUIPMENT AND METHODS

Housing of Brood Sows at Farrowing Time—Letting the Pig Do the Work of Feeding Himself—Combining the Pure-Bred Branch With That of the Pork Producer—Making the Farm Better.

THE hog has and always will have a stable standing in the live stock end of progressive agriculture. The hog has been a potent factor in paying off the mortgages on hundreds of corn-belt farms. Therefore the methods employed by a successful swine breeder should be of interest to the majority of our readers.

CHEAP, COMFORTABLE FARROWING PEN.

Among practical swine breeders there is a wide difference of opinion as to the relative merits of the individual farrowing house as compared with the up-to-date artificially heated hog house. Many breeders use each successfully. The period covering the months of March and April is the critical period, future profits considered, for the swine breeder, as the largest number of pigs are farrowed during those two months. The man who succeeds in saving the largest percentage of pigs farrowed at this time will have the largest net profits from this particular branch of his live stock business at the end of the year. In this article we will give the plans of work in practice at Sunny Slope Farm, in Washington county, Iowa, the manager of which is an enthusiastic advocate of the individual farrowing pen. That method is used exclusively in raising pure-bred Hampshires on Sunny Slope Farm. Four or five hundred hogs are annually produced, and with a minimum mortality rate among the young pigs at farrowing time. There are various types of individual pens, but the kind used on Sunny Slope Farm is that shown in the accompanying illustration. The base is five feet ten inches by six feet. The sides are made of 1x12 boards sixteen feet long. These are sawed into three pieces, making them five feet and four inches in length. The ends are boarded up with drop siding. A door is made in the end about twenty by thirty inches and a two-inch hole bored above it for the purpose of ventilation. The advantage of a small house is the increased warmth from the conservation of the animal heat in the sow. An enclosure about 16x16 is made around the pen in which the sows and pigs may take exercise. They are kept in these pens until the pigs are four weeks old and then two or more litters are allowed to run together.

The exact breeding date is an important consideration. The sow should not be confined in the small pen longer than three days before she farrows. At Sunny Slope no one loses sleep sitting up with sows at farrowing time, as it has been learned from experience that, if sows have had plenty of range, and if they have been forced to take an abundance of exercise along with having been properly fed, it is a rare exception for one to have any difficulty in farrowing. Nature is allowed to have full sway, and the sow is not molested for from twenty-four to thirty-six hours after farrowing except to remove the placenta and any dead pigs that may be in the pen. Dry bedding that has been used in the barn for other animals is disinfected with coal oil and placed in the pen before turning in the sow.

Neither pigs nor hogs of age are given slop. The pigs are given dry feed, consisting of a mixture of 60 per cent ground oats, 30 per cent ground corn, 5 per cent each of linseed meal and germ oil meal. Plenty of fresh water is always kept in the lots so that the pigs can have free access to it. This practice is followed on the theory that the dry feed and water will be better mixed and in better proportions for the pig's benefit if the mixing be left to nature than if done by human hands. Making and carrying slop to 200 or 300 hogs is no small item of labor, and by the above method all this is avoided.

Raising such a large number of hogs gives an opportunity to cull out all inferior animals and send them to market, and still have a large number to sell for breeding purposes. A show herd is exhibited at the leading shows each year and championships have been won at the International Stock Show on hogs bred at Sunny Slope. Part of the surplus is sold in annual bred sow sales at very satisfactory prices. From five to eight car loads of steers are always on feed at this farm and incidentally we might add that they have been good enough to win in the car lot division of the International Stock Show. Hogs are always allowed to follow cattle, and thus some cheap growth is obtained. The plan of farm operation is an ideal one in the objects attained. The number of animals kept is greater than the capacity of the farm to produce feed. The situation demands the purchase of several thousand bushels of corn an-

COMPETING WITH THE ENSILAGE FEEDER.

Attention has frequently been called to the fact that the cattle feeder gets his largest profit not directly from feeding operations, but rather from the increased productiveness of his land. However, the average man likes to see a profit on every branch of his operations. Unless live stock farming can be carried on so that by and for itself it pays well for the time occupied in carrying it on, then no amount of screaming from the house top will ever make the live stock industry take permanent root on the farms of the corn belt.

One of the experiment stations recently finished up a bunch of steers that were fed shelled corn, cottonseed meal and clover hay. These steers were purchased at $5.55 per hundred pounds and they were sold for $8.25, but in spite of this good spread in value the net profit per steer was $3.37. It cost $14.23 to make a hundred pounds of gain on these steers, computing the feed at regular market prices. In an adjoining feed-lot a similar number of steers were fed the same length of time, but in this case corn silage was used in place of clover hay. These steers, were bought at same price, namely, $5.55 per hundred pounds, and they sold ten cents per pound higher than the steers fed on hay, or for $8.35 per hundred pounds. Their gains were made at a cost of $9.88 per hundred pounds and the net profit per steer in this case was $20.96.

These results are worth pondering over by those who propose to follow along the same old-fashioned route in feeding cattle. The cheap gains in this case were due to the fact that a given acreage produces a larger amount of good fattening food in the form of ensilage than can be produced in any other way. The man who tries to finish cattle on dry feed alone must in the future compete with those who take this short cut to cheap gains. There can be only one outcome of a situation like this, namely, that the practice of those who use the cheapest meat-making foods will be the basis of cost in the future. Those who cannot bring the cost down to this minimum point by the use of this comparatively inexpensive food will be eliminated from the business or they must continue to carry it on at a loss, relying wholly for their profit upon the effect of feeding operations on the productiveness of their land. As said before, this profit will not suffice in the case of the average man. If dry feed cannot be fed at a profit then quit feeding dry feed. If ensilage reduces the cost of making gains anywhere from two to four cents a pound, then how is this competition to be met by those who do not feed ensilage?

WARNING TO FRUIT MEN.

From Kansas comes the report that in their efforts to stop the incursions of worms and caterpillars, farmers are killing their fruit trees by misapplying axle grease and white paints. The warning issued by Walter Wellhouse, secretary of the horticultural society of that state, may well be heeded by farmers everywhere:

Sticky fly paper is one of the finest things there is to prevent worms or caterpillars getting up into the trees. If this is not available take some cotton batting and tie it around the tree and then coat it over with axle grease or a solution of castor oil and rosin, which makes a sticky substance that catches the bugs and worms as they attempt to crawl up the trees to get at the foliage and fruits. The only thing to do is to be careful that all the cracks and holes made by rough places in the bark of the trees are filled up with the cotton.

Axle grease or other petroleum greases are all right and do the work if applied properly, but they must not be put directly on the trees or it will kill the trees. Wrap the trees in cloth and then coat the cloth and see that the cracks in the bark are stopped up. Either an adhesive or a greasy substance will do the work of preventing the bugs getting into the trees or of preventing rabbits eating the bark. Either plan will work all right, but do not apply the grease to the bark itself and do not put the fly paper on the trees, sticky side in. Put the fly paper on and tie it fast with the stickiness outside so the bugs will get into it and die.

The abuse of useful curative remedies is well illustrated by the experience of the Kansas fruit growers. There is fully as much in knowing how to apply cures as there is in knowing what to use. A little attention to the advice given by Mr. Wellhouse may save many farmers of the grain belt from much fruit loss.

MAKING FARMING WORTH WHILE.

Addressing the Kansas State Bankers' Association Governor Hodges raised the interesting point that while all social progress and welfare depend upon the prosperity of the farmer, still the latter is not to be measured alone by bank deposits, important as they are. The farmer must not only be prosperous in a material and financial way; he must be prosperous in a mental, spiritual way, also. He must not only enjoy the leadership which monetary wealth brings, but he must enjoy those advantages upon which the comfort and serenity of happy farm life depend: means of communication, opportunity for self-advancement, enlarged sphere of usefulness, pleasures and opportunities such as others enjoy. Governor Hodges made this important and plain to his banker auditors, saying:

The crowning glory of a state is the universal education of its people, and an educated people is a prosperous people. I do not mean prosperity in a financial way alone, but that degree of added citizenship that enables us to meet the responsibility of the present-day age. Life is more than meat, and the body is more than raiment. Increased bank deposits and overflowing granaries give greater cause for gratitude, but they only begin to solve the problem of state development. The prosperity of the farmers is more than fundamentally important, for upon our agricultural industry rests, in turn, the prosperity of the very large percentage of her people, but the prosperity of agricultural districts must not be measured alone by the individual wealth of the agriculturalists or stock raisers.

The means of educating the children of the farmers, the comforts of the families, the facilities for transportation and communication, the provisions for the full enjoyment of country life so that it will be inviting to the young man and woman who are reared in the country or in the towns of the state, are also problems that must now engage our thoughtful attention, and the thoughtful attention of you gentlemen who are the commercial molders of the state, if the one great asset of our state is to be conserved and nurtured.

The greatest of modern questions with which you gentlemen, who are the individual leaders of your communities, must deal is that of the betterment of the conditions in rural life. Thoughtful men are directing their minds to this question.

One of the chief propositions that must concern all thinking men is the solution of the civic center problem. I note with gratification that some communities in this state are already taking hold of the movement and are now applying themselves to the community life, and the community life means back to the farms, more pleasant surroundings for our young men and women. The influx of the younger men and women to our cities, fraughts our rural districts with grave danger. You must have better roads, more attractive social life, community centers, so that the younger generation will not feel that they are prisoners upon the farms, but will learn to realize that farms and farming are the great basis of the wealth of this great nation.

It is a most gratifying sign of the times that the very man who can most assist the farmer in reaching the fulness of life is already so interested in his progress. The banker and the farmer make a strong team and one which is working together, for mutual good, in all parts of the country. Land values have become so high that farming can no longer be profitable when conducted in a haphazard manner. The farmer who does not some time or other need the friendly co-operation of the banker is rare indeed. It is because the two men are working together that each is prospering and that the farmer is reaching that position where his prosperity is not confined exclusively to his bank balance, but takes in the larger things which make life really worth while.

CUTTING AND CURING HAY.

There is no farm operation that affects the farmer's profits, in view of the extensive area of the farm devoted to grass culture, so much as the cutting and curing of hay. In early times it was customary to commence haying when the entire crop of grass was ready to cut, but in late years the relative feeding value of grass cut at different periods of growth has been more generally recognized, and the progressive farmer who has a large acreage to harvest begins before the period of greatest value has arrived. It is more profitable to cut a part of the crop too early than to cut the larger part too late.

The proportion of stem and leaf growth in grass affects its composition and digestibility, and what is lost in the development of stem by early cutting is more than made good in the composition of the leaves. The leaves are richer in protein than the stems, and as the protein is the valuable element of hay the composition of these should be given great consideration in determining the time of cutting. For instance, the analysis of timothy hay cut in early bloom shows 8.15 per cent of protein, while ten days later it shows but 7 per cent. A yield of a ton and a half per acre would show about 170 pounds of protein while the same quantity cut ten days later would show but 104 pounds of protein. There is much advantage also in the early-cut over that in the late-cut hay.

The mistake of overdrying hay in the field is often made. This applies especially to clovers and in a less degree to grasses. The clover leaves dry faster than the stems when spread out and exposed to the sunlight and wind, and if the hay is stirred much with the tedder the clover will lose many of its leaves. There is also a great advantage in placing large quantities of hay in a mow over scattering around one load in a place, for the natural heating will dry it out if so placed, when this effect would be lost in small quantities. Clover should be cut in the early afternoon, turned over before night, and if the weather is good hauled to the barn the following afternoon. There is much more damage to the hay crop resulting from overdrying than from underdrying.

Summarizing the matter of cutting and curing hay, it can be asserted that all grasses and clovers should be cut before they have passed the blossoming stage, that overdrying should be avoided, should be put into a high mow in one day, and that the largest feedng value comes from grasses grown upon soil liberally treated with nitrogenous manures.

A POLITICAL STALLION LAW.

Nebraska stallion owners in the future must go to political head quarters and obtain a permit to keep for public service, sell or exchange a stallion or jack because, according to a law recently enacted, the stallion registration board is composed of the governor, state treasurer and commissioner of pubic lands and buildings.

To obtain a certificate the owner must furnish the board with an affidavit from a qualified veterinarian giving to the stallion or jack a clean bill of health. Under the law the board cannot grant a certificate if the horse has ring bone, side bone, bog spavin, bone spavin, curb, stringhalt, shivering urethral gleet, melanosis, periodic ophthalmia (moon blindness), laryngeal hemiplegia (roaring), cataract, amaurososis (glass eye), chorea (St. Vitus dance), cramplineos, curby formation of hock or is seriously defective in conformation, or vicious disposition.

Under this law it costs $3 to apply to the board for a certificate, the owner in addition bearing the expense of the veterinarian's examination. Every stallion and jack in the state must be re-examined annually until the animals are eight years old. Certificates are granted alike to the owners of pure-bred and grade stallions, but in the case of grades two-inch type must be used in poster or card advertising in making known to the public that said animal is a grade.

A fine ranging from $50 to $100 or imprisonment in county jail not exceeding thirty days is the punishment provided for a violation of this law. All inspections made and certificates issued under the old Nebraska stallion registration board are recognized under the law for the year 1913.

WHERE DISEASE GERMS LURK.

The advent of another season calls attention once more to the danger which lurks in the visits of the ordinary house fly. As a disseminator of disease it is doubtful if there is any more deadly agent. Carrying filth on its wings, feet and antennae, the fly goes from garbage can and manure pile to the cup of milk set aside for the baby and to the food that goes to sustain life in the invalid. Nothing is sacred from the deadly visitations. Typhoid fever, dysentery and many other diseases are spread by the fly's visitations. Nothing is more important at this time of the year than to make it absolutely impossible for the house fly to contaminate the family food supplies.

In connection with the annual fly campaign the health department of one of the prominent southern cities has issued a fly decalogue which every farmer and every member of the farm household should heed, before it is too late.

1. Remember thy garbage can to keep it covered, lest thy garbage become a stench in the nostrils of the people and breed flies.
2. Thou shalt cut the weeds in thy vacant lot, lest it become a hiding place for old tin cans, which catch water and breed mosquitoes, papers and divers sort of trash.
3. Thou shalt bear witness against thy neighbor's rubbish heap, likewise his dirty back yard.
4. Thou shalt clean out the habitation of thy horse and thy cow frequently, lest the stable fly flourisheth and spread infantile paralysis, and the house fly breed by the thousands and millions, and annoy thee and thy beast and produce much sickness in thy family.
5. Thou shalt prevent the breeding of the fly in the springtime, that thy children unto the third and fourth generation need not swat him later.
6. Remember thy back yard and alley to keep them clean. Six days shalt thou labor to keep thy premises clean, and if yet the task is not accomplished thou couldst do worse than continue on the seventh.
7. Thou shalt covet all the air and sunshine thou canst obtain.
8. Look not upon the milk when it cometh from the unclean dairy; for the doctor will not hold thee guiltless if thy infant sickeneth therefrom and die.
9. Remember thy cleaning-up day and keep it wholly.
10. If thou dost hearken unto these sayings, to do them, thou shalt live long in the land.

Conditions are much more apt to become serious, through carelessness or lack of sanitary conveniences, in the country than in the city. Absence of garbage cans or improper disposition of refuse may mean the health and even the life of a loved one. This is too serious a matter to let go. We urge upon all our readers that they look around their house, their outbuildings and their premises generally and clean out the breeding places in which the germs of deadly diseases are even now lurking.

THE HORSE STILL SUPREME.

In a lump sum the horses of the United States are valued at the immense sum of $2,278,222,000. The average price of a horse has advanced $4.83 since 1912, and he is now held at $110.77. In the country there are 20,567,000 horses. Iowa has 1,568,000 horses, Illinois 1,482,000, Texas, 1,181,000, Kansas, 1,099,000, Missouri, 1,084,000, Nebraska, 1,027,000. The range of valuation is from $147 in New Jersey to $58 in New Mexico.

In the matter of individual valuation, however, the horse must give way to the mule, that has a selling value of $124.31. In some states the mule is valued at $171.00. In Missouri, which produces 326,000 mules a year, the value is put at $117.00 each. Texas leads all the states in mule raising. Missouri, Georgia, Mississippi, Tennessee, Alabama, Oklahoma, Arkansas and Kansas follow in the order named.

Save all the mill feed and gunny sacks. They come in very handy for various purposes around the farm.

THE FARM POWER HOUSE.

By the sensible use of certain forms of power on the farm a very large saving can be made on the upkeep of implements alone as compared with the plan of allowing them to go by default until they are no longer fit for use. It requires some little equipment, to be sure, but farm implements are relatively high in price and a man can earn good wages during the time that he spends in keeping them in good condition. A properly equipped shop or power house will aid much in cutting off the loss due to depreciation. A Kansas subscriber emphasizes this point and enumerates briefly some of the things that can be accomplished when the proper plan is followed in installing the equipment. Among other things he says:

It is much more economical to run several machines at the same time than to run each one separately. By putting in a line shaft and connecting all the machinery, a farmer can run them at the same time with the same engine or dynamo. If desired each machine can be run separately.

A churn, cream separator, washing machine, emery grinder, pump, common grindstone, etc., as well as feed grinder and ensilage cutter can be easily handled. It will probably pay the farmer if he operates a large farm to have a large enough engine to run a corn sheller and wood saw. It makes it more handy to have the engine in a separate room and run the power belt through an opening in the partition.

One farmer kept his engine in a small engine room. On the north of the engine room was a longer room which was well constructed. Mounted in this room was a cream separator, churn, pump, washing machine and one or two other tools. Of course, the room was long enough so the different machines were a good distance from each other.

On the north of this tool room the feed grinder and corn sheller were located. By using belts of different lengths all this machinery was run by the same engine. The line shaft which ran all the tools in the main room was suspended from the ceiling by hangers which were oiled by wick oilers. Care should be taken to keep the main tool room in a sanitary condition. The floor should preferably be made of concrete.

Where there are growing boys on the farm a power house with its necessary equipment will be one of the chief centers of attraction. The average boy likes to be "tinkering" and where he has some equipment to work with he can accomplish something and in turn, he is all the time receiving a most excellent training both mechanically and mentally. The introduction of new forms of power on the farm is doing much to make the work more attractive for the growing lads, saying nothing of the saving that can be effected by keeping implements of every sort in proper repair and by taking advantage of the modern methods of performing labor whether this has to do with the feeding and care of live stock or with the preparation for field work.

DISKING ALFALFA AFTER CUTTING.

We have two or three inquiries from as many farmers who have alfalfa who ask for information along the same line, the disking of alfalfa after it has been cut. One or two express doubts about the disking doing good, although these men never have tried it. Another asks how the disk should be set for doing work, whether to throw much dirt or to cut down into the sod without moving the dirt.

The disking of alfalfa pays or it does not pay, depending upon the condition of the alfalfa and the weather. We would not recommend the disking of young alfalfa, say which has been established only one or two years, as the roots are still so small and tender that the disk may cut many of them below the crown, in which case the plant will die. Disking does the most good to old alfalfa, that which has become rather sod-bound and large in the crown. The object of disking is to stir a hard, compact surface soil and to split without entirely cutting through the large crowns. An alfalfa crown that is split just right will send out many more branches than it ever did before, and will start out with a new lease on life.

The disk harrow working in alfalfa should not be set to throw much dirt, as that would mean the cutting of too many roots; instead, the disks should be run rather straight and weight applied to make them cut, with just angle enough so the soil is slightly cultivated. The alfalfa cultivators do much more satisfactory work than disk harrows, as the spikes dig up the surface and split the crowns without cutting or tearing the plants out by the roots. Of course the grower of limited acres cannot afford to buy one of these alfalfa cultivators or harrows when a disk harrow, a common tool on every farm, can be made to answer the purpose on a small acreage.

COWPEAS AFTER SMALL GRAIN.

We predict that a smaller acreage than usual has been seeded to timothy and clover this spring on account of the high price of seed. This means that much land after the cereal crop is removed in July will remain wholly unproductive during the rest of the season unless an annual crop is seeded as soon a possible after harvest. For this purpose cowpeas can be used to very great advantage. While under certain conditions it is impossible to seed the peas without plowing the land, yet, ordinarily, it pays to turn under the stubble in order to properly prepare the seed bed. In the case of abundant rainfall so that the ground stirs easily double disking may answer every purpose.

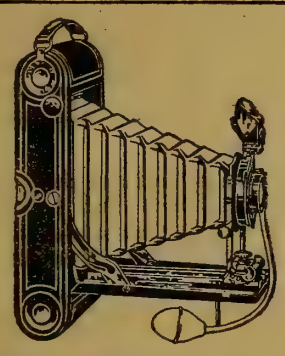
Better results are obtained from drilling in cowpeas than from the plan of broadcasting. This method saves seed and four or five pecks per acre will answer every purpose. Ordinarily, the seed is too high in price to sow broadcast and run the risk of having a certain percentage left on the surface where it will not germinate. Fair results may be obtained by stopping up every other cup in the grain drill and using only two or two and one-half pecks per acre. The peas under these conditions will grow a little more rank, but they will, eventually, spread out and cover the whole surface if weather conditions are favorable.

As to the use that should be made of the crop, much depends upon conditions. If land needs enriching in organic matter it might be advisable to plow it under late in the fall, though we believe that after a crop is produced, its feeding value is greater than its fertilizing value and some plan should be worked out to utilize it for live stock. If this is not practicable, however, the investment in the seed and the labor involved in putting in the crop will be more than covered by the benefit that will be derived from plowing it under.

We repeat that the plan of sowing cowpeas after removing a small grain crop is especially adapted to those cases where ground should have been clovered this year, but, owing to peculiar circumstances, it was not seeded. If a heavy growth of peas results the land will be in fair condition if it is plowed late this fall for a corn crop next year.

The Museum of Natural History in New York has recently received a specimen of the giant forest hog of Africa, which lives in the densest forests of the Dark Continent, and therefore, has been seen by very few persons. Natives report that these animals attain the height and size of the zebra and rhinoceros. Their very appearance is terror-inspiring, and on account of their fierceness the natives generally leave them alone. Because of the overgrown character of the country frequented by these animals it is impossible to hunt them, except at close range, and the tribesmen of the country will go after them only when the rewards are very great. The animals have a very large head, with great tusks protruding at either side. Under the eyes there are warty growths which add to their unattractive appearance.

Ask your neighbor to subscriber for The Homestead.



KODAK
on the Farm

There's a practical, common sense use for the Kodak on every well regulated farm. It's rapidly becoming a necessity to the business farmer. Pictures of stock and poultry to be sent to prospective customers, pictures of crops at certain stages of their growth as a matter of valuable record, pictures of fat or lean cattle and hogs and horses as a record of certain methods of feeding, pictures of buildings that are to be re-modeled, pictures of desirable features in other peoples buildings—you can use all these to advantage in *your* business.

And you can make good pictures with a Kodak, or with a Brownie and can successfully do the developing and printing. No dark-room, no fragile glass plates. Nothing complicated.

Ask your dealer to show you the goods and give you a catalogue, or write us and we will mail catalogue without charge and give you the address of your nearest Kodak dealer.

EASTMAN KODAK CO.,
392 State St., ROCHESTER, N. Y.

The "Little Giant" Way to Crib Your Corn and Grain

IT'S the *modern, labor-saving, time-saving, money-saving* way—the sensible, practical, logical way. Thousands of owners *know* it—and we want to *show* it to you. With the "Little Giant," you simply drive on the jack, throw the lever, start horse or engine power and *up goes the biggest load* in five minutes or less. Think of it! No more scooping! Good huskers go *miles* to find men who own the "Little Giant." Yes, sir—and they work for one-fourth to one-half cent cheaper per bushel! They do 20% *more work* when there's *no scooping* to do. With the "Little Giant" the work is all done *before* cold, bad weather sets in. Saves many dollars you never figured on—never counted in profits. Get the *proof* in our *free book.*

Send For Our Free Book

Get *all* the facts about the "Little Giant"—know for yourself what it is, what it does and what it means to you. See what a wonderful machine it is. Learn about its construction features and practical advantages. Shelled green corn and silk in the crib means rottage and molding. Our new screen feature in bottom section separates it from the ear corn and saves it for feeding. Send postal for facts, figures and proofs. Ask for our great Free Book of Crib Plans if you are going to build or remodel your cribs.

PORTABLE ELEVATOR MFG. CO.
155 McClun Street, Bloomington, Illinois

FREE TRIAL

Let us *prove* that this is the cutter you need. Don't send us a dollar in advance. The burden of proof rests on us. We want to prove that for speed, economy of power, uniform cutting and general efficiency

The Light Running
"SILBERZAHN"
ENSILAGE CUTTER

has no equal. The Silberzahn has the strongest built frame, a throat and a blower that never clog and a *positive safety device.* Ask for *proof*—write today for catalog, prices and *FREE TRIAL OFFER.*

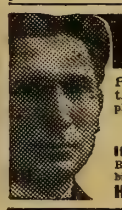
GEHL BROS. MFG. CO.
112 So. Water St., West Bend, Wis. 3

BUG DEATH

Kills all bugs and worms that eat the leaves of any plant or vine: also prevents blight.

CONTAINS NO ARSENICAL POISON AND WILL NOT INJURE THE FOLIAGE.
Give it a trial this year.
If your local merchant does not sell it, write us.
Our booklet, Crop Insurance, mailed free.

Danforth Chemical Co., Leominster, Mass.



160 PAGE BUGGY BOOK FREE

Phelps pays the postage. Send a postal now. Don't buy any kind of a vehicle till you see Split Hickory Factory Prices and the 140 styles—full and complete line of Harness—all backed by highest quality ever produced. 167,000 customers prove value.

LET PHELPS SAVE YOU $25.00 TO $40.00
If not—NO SALE. 30 days Free Road Test—2 year guarantee
Be sure to get the big book—read how Split Hickorys are made—why Phelps makes you such big savings and why no one else can do so well by you—Address postal now to

ALFALFA, $6; SWEET CLOVER, $11; cane, millet, timothy, $1.50. Pigs $11. Cholera serum, 2 cents. Farms for sale and rent on crop payments. John Mulhall, Sioux City, Ia.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Just as long as you can keep your herd don't lose your nerve in these times of hog-cholera devastation. You had as well run the risk of the disease wiping out your herd as "the other fellow," and the farmer who can take his hogs safely through this period, is going to feel well repaid for his efforts in the hog-raising business.

If much hauling is being done, keep the horses shod, at least in front.

Skim milk, with a little oil meal added, and a pasture lot to run in, will keep the little porkers on the sure road to profitable pork production.

A little watchfulness from now on will prevent the loss of considerable wool on creep holes in the wire fencing, nails about the fold, snags of boards, rails, etc.

Very rarely do you ever see a good, tight wire do any damage to the live stock—it's the slack piece of wire thrown carelessly about or hanging to a post, that demands a tremendous toll from our farmers every season, in the shape of fine horses, by ruining or killing them.

Keep a sharp lookout for hawk and crow nests; promise the boys a bounty on every hawk or crow egg, or for one of their young. Wage eternal warfare on these foes to the poultry-raising business!

A Missouri subscriber is very anxious to obtain the experience of men who have used the stone silo. He lives in a community where stone is relatively cheap and is contemplating putting up this type of a silo. He would like to be a little surer of his ground, however, before undertaking it and for that reason asks for the experience of those who have tried out this type of silo.

Don't feed the brood sow very heavily on milk-producing foods until the little fellows are strong enough to tumble about and get considerable exercise. Many a pig has died young because he tried to make a hog of himself in a couple of days.

Fresh air is so common a thing on a farm that it sounds foolish to mention it, but did you ever stop to think that many of the common things that are without price to us on the farm are priceless in an altogether different sense to our cousins who live in the larger cities?

The fly will soon be with us again and will probably be as "fat and sassy" as ever in spite of the swatting she got last year. It might not be a bad plan to hunt up the hand sprayer and get a can of fly chaser. It is a great help in making milking time a little more pleasant.

It looks as though we will be called upon to "pay the freight" on what is to be known as a county road and as roads are to have special names we suggest that "The Automobile Speedway" might do.

One of the many things that try the patience of the dairyman is the teaching of the heifer to stand quietly while being milked. There is a difference between teaching and breaking heifers to stand still. Begin teaching the heifer some time before calving and no break will be necessary.

No doubt there are some buying cars who should not buy them, but there are likewise about as many farmers who should buy cars but who do not. The modern car is a great time saver during the busy season of the year.

The trouble with too much of the corn is it is too much of a stand. Thick corn looks pretty when small, but it usually looks bad at earing time.

The young folks of today are not the gardeners young folks used to be. When I was a boy both girls and boys worked in the garden, and everyone had a good garden; nowadays the girls begin to primp to attract beaus at a childhood age and must not soil their hands by garden work, while the boys think of other things besides gardening.

Crop killers have already had two raps at the winter wheat crop. First, the dry weather, then the Hessian fly. Other crops will, no doubt, "get theirs" later.

The sticky condition of the fields this spring led some of the anxious ones to leave the grain drill in the shed and do their seeding with the old broadcast. This will be a good season for them to observe the fields of their more slow-going neighbors and see who wins out at threshing time.

A rather smooth-talking salesman was trying to convince me, a few days ago, that I should put my old gasoline engine on the junk pile and buy a kerosene engine from him, of course, claiming that the saving in my fuel bill would soon pay for the new engine. Perhaps he was right, but it occurred to me that the old jingle of "Good, true friends are hard to find" might hold good even with machinery.

The "test your seed corn" slogan seems to have petered out to a great extent, but the work of testing goes on as usual. One failure to get a stand of corn lasts a long time.

The average farm furnishes income from the small things that were not noticed years ago. Dairying was little done in the corn belt thirty years ago, while poultry raising was confined largely to home needs. Eggs were really cheaper then than now, too, so we see that a larger production frequently opens the way for a larger demand.

One sees straight rows, fairly straight and mighty crooked rows. I usually make mine to conform to the intermediate class, yet, when the marker does not find fresh soil and harrowing was last done in the same direction with the planting, they often appear in the latter class. The maker of crooked rows excuses himself by the oft-made remark that more corn grows in a crooked row.

The summer pasture propostion is resolving itself into a very expensive one. I should not wonder if some of us are now paying more to carry an animal through the warm half of the year than it costs to take the same animal through the cold half. The keeping of stock cattle is now generally limited to the pasture acreage, as all in the corn belt have plenty of winter feed.

Common mosquito bar makes a very cheap efficient screening for the windows in summer; is neater in appearance than the regular wire screening, and can be easier mended if torn.

In most states, the farmer pays a good stiff road-tax. Look around a bit, and see that this money is judiciously expended on the public highways.

Look out for tight collars as the horses pick up in flesh.

A Real 1913 Car

By R. E. Olds, Designer

Here are some things which you should look for in a 1913 car. A car without them lacks things you should have.

New Features

The leading cars of this year have the left-side drive. They have electric dash lights—set-in lights—not the old projecting lamps.

They have oversize tires. Skimpy tires, which double one's tire bills, are quite out-of-date.

All cars, in such things, follow the leaders. So don't get features which the best makers have abandoned.

New Ideals

Then men today are buying cars for keeps. So the best makers now are building cars which will run for years like new. And cars which cut down upkeep.

Reo the Fifth, my latest car, shows what such cars require.

It is built of steel made to formula, and analyzed twice. The gears are tested in a 50-ton crushing machine. The springs are tested for 100,000 vibrations.

Every driving part, as a margin of safety, is given 50 per cent overcapacity.

We use 15 roller bearings, though they cost five times as much as common ball bearings. We use 190 drop forgings to avoid the risk of flaws

We use a $75 magneto, a doubly-heated carburetor, a smokeless oiling system.

We build slowly and carefully—grind parts over and over—watch them through endless inspection.

Each engine is given five long tests, lasting 48 hours altogether.

We could save in our building about $200 by using less care and less costly parts. But it would cost you in upkeep, in years to come, several times $200.

So we give you the best we know. Then we save you about 20 per cent on our cost by confining our output to this single model.

Thus we give you a car, built as we describe, at this matchless Reo price.

Rod Control

Reo the Fifth has our new control. All the gear shifting is done with one center rod, entirely out of the way. It is done by moving this rod only three inches in each of four directions.

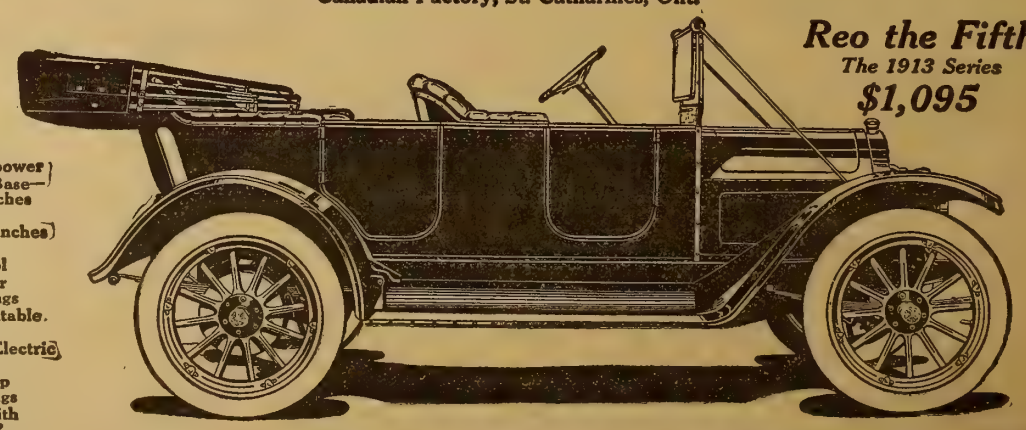
There are no levers to clog the way of the driver. Both brakes are operated by foot pedals. So the driver enters from either side.

You will want this feature in your car when you see how much it means.

After 26 years spent in car building, Reo the Fifth marks the best I know. If you want the best, please see it.

Write for our catalog and we will direct you to the nearest Reo showroom. They are everywhere.

R. M. Owen & Co., General Sales Agents for Reo Motor Car Co., Lansing, Mich.
Canadian Factory, St. Catharines, Ont.



Reo the Fifth
The 1913 Series
$1,095

30-35 Horsepower
Wheel Base—112 inches
Tires—34 x 4 inches
Center Control
15 Roller Bearings
Demountable Rims
Three Electric Lights
190 Drop Forgings
Made with 5 and 2 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, Prest-o-Lite gas tank for headlights, speedometer, self-starter, extra rim and brackets—all for $100 extra (list price $170).
(Gray & Davis Electric Lighting and Starting System at an extra price, if wanted.)

CURRENT EVENTS

PLANS for a reorganization of the republican party were laid by a number of the progressive branch of the party at a conference held in Chicago last week. The leading spirits of the meeting were Ex-Governor Hadley, of Missouri; Senator Cummins, of Iowa; Senator Kenyon, of Iowa; Senator Borah, of Idaho, and Senator Sherman, of Illinois. After a two days' meeting a public statement was issued which pledges the conference to a number of important party reforms, chief among them being a change in representation so that the South, with but little republican vote, will not be represented fully as strong as the North and East, with a strong republican vote; adoption of the primary law and a change in the manner of considering the credentials of conflicting delegates. These three things were the undoing of the party at the national convention in Chicago last summer and the rebelling convention which was the forerunner of the progressive party. While the progressive element among the republicans was taking this action in Chicago, however, the standpatters continued to stand aloof, saying that when the party was reorganized the initiative would have to be taken by them. A serious split still exists in the party and whether the breach can be bridged is still doubtful. National Chairman Hilles has called a meeting for the 24th of this month, at which time it will be decided whether a national convention will be held this year to consider reorganization plans so as to be ready for next year's campaign in the various states.

PRESIDENT WILSON proposes to go further than President Taft in furthering international peace. It will be recalled that President Taft proposed treaties between the United States, Great Britain and France, referring all disputes, excepting those affecting national honor, to an arbitration tribunal composed of representatives of the two countries. The senate so amended the treaties that when they finally passed they were no longer acceptable to the three nations. Now President Wilson, aided by Secretary Bryan, is carrying on negotiations for an agreement "with every other nation, great or small, that so far as our nation and that contracting nation are concerned, there will be no war, no declaration, no commencement of hostilities until the question in dispute has been investigated by an international tribunal and its report made known." The present proposal does not limit the questions of dispute in any manner, nor is it confined to a few of the great world powers, Secretary Bryan having already assembled the representatives of thirty-six nations at Washington and submitted the Wilson plan to them. At the recent meeting of the international peace delegates in this country Secretary Bryan addressed them, urging the acceptance of the new plan, saying that it "is a long step in the direction of peace." It is now proposed to have a world-wide celebration of 100 years of peace between English-speaking nations, celebrating the centenary of the Treaty of Ghent, which closed the British-American war of 1812-1814 and which was signed December 24, 1814. An invitation to participate will be extended to practically the entire world, so that the event will go a long ways toward advancing the cause of universal peace.

J. PIERPONT MORGAN stood as ready to aid President Wilson, should financial panic ensue, as he did President Roosevelt or President Taft. Such is the assertion made by Col. George Harvey, who had a long and intimate talk with the late financier just before he left for Europe, where he died. Mr. Morgan's words, according to Colonel Harvey, were these: "When you see Mr. Wilson tell him for me that if there should ever come a time when he thinks any influence or resources that I have can be used for the country, they are wholly at his disposal." Mr. Morgan was quite generally given credit for having saved the country in the financial panic of 1897 by placing his immense resources at the command of the government and using his influence with financial leaders to restore confidence. Since his death Mr. Morgan has been quite generally eulogized for his public spiritedness, the animosity engendered by his great wealth and commanding position passing wtih his death.

Anyone who has wrestled with the check rower of twenty years ago, surely can appreciate the perfected planter of today. The old "detachable" checkrower certainly was a time-killer.

This Free Book Explains Money Saving Short Cuts on Corn Cultivation.

At last a readable book of corn pointers for practical farmers. Shows why farmers lose by improper cultivation. Explains money saving features of the Bailor 2-Row Cultivator, the only successful 3-horse machine on the market.

Investigate This Wonderful BAILOR 2-Row 3-Horse One Man Cultivator.

Saves half your time and expense. Plow on any kind of ground, even against sidehills. Balance frame prevents neck weight. Draft equalizer makes light draft. Independent control gangs and shovels. Built of steel and malleable iron. A boy can operate it.

Send Us Your Dealer's Name

If he doesn't handle the Bailor we'll arrange for a free demonstration without obligating you.

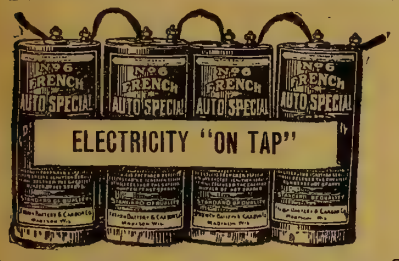
Atchison, Kan.



Think of having the wonder-working power of electricity "on tap" all the time! Father, instead of fussing with a lantern in the barn, now simply presses the button of an electric flasher. Mother doesn't stumble down dark cellar stairs, risking life and limb any longer. She "switches on" a light and goes her way in safety. Son John—the coming "Young Edison"—is making all kinds of electrically-driven apparatus, from a doorbell to a gate-opener. Daughter Mary finds many uses for electricity. Even the mail-carrier presses a button on the mail-box 'way out in the road, which rings a bell telling the folks that there's mail in the box.

And remember this: These things and dozens of others can be done in a jiffy, at small cost, by the use of a few

French Batteries are scientifically constructed *packages of electricity.* They are *special*-purpose batteries built for a *special job.* Thousands of auto owners insist on the French "Auto Special"—the dry-cell battery with the blue label. The green-labeled French Dry Battery is for household uses.

Get this Book

Send for our great free book. Describes over 100 uses of French Dry Cells—an education to any man or boy. Mail in the coupon below—it brings all the facts. Tells what French Dry Cells do; why they last longer and give better satisfaction than others. Prest-O-Lite

No Other Light So Cheap, So Good, So Dependable, or Any More Convenient.

Gives the best practical road light you can use. If you wish, you can add an automatic lighter, and light and extinguish the lamps from the seat, thus giving all the convenience of the more complicated systems. It costs less to use than any other brilliant light—usually costs less than the carbide you feed a generator. Why bother and take risks with poor or unreliable light when Prest-O-Lite costs you no more?

Ask Any Dealer to Guarantee—

1. That the lighting system he offers you is as reliable, as free from repairs, as efficient, and as economical as Prest-O-Lite.

2. That any more complicated system will not cost more for repairs and replacements during the first season's use than two years' use of Prest-O-Lite.

3. That the system he offers you will not materially handicap the power, speed and efficiency of the car or increase the weight.

If you cannot get this guaranty, in writing, better get Prest-O-Lite.

Prest-O-Lite Is An Investment

Size "E" Prest-O-Lite costs only $15. This is an investment as it can always be sold for about this price and never becomes second-hand. The exchange fee is no greater than carbide to give you an equal amount of light from your lamps using a generator. New lamps are not needed if you are now using a generator, and even the same rubber tubing can be used.

In its safety, and protection, Prest-O-Lite saves you more than its costs. One accident at night might cost you many times the price of Prest-O-Lite. One repair to a complicated lighting system might easily cost you more than years of Prest-O-Lite Service.

For Farm Emergencies

Prest-O-Lite is invaluable should night catch you with some important bit of farm work unfinished. It can be set up on the spot in a few minutes, giving you light as bright as day. This one feature should make Prest-O-Lite invaluable to you.

Prest-O-Lite Exchange Service

If you have any doubt as to obtaining Prest-O-Lite exchanges quickly or conveniently, consult your nearest dealer or write to us. We will gladly arrange to give you prompt service. Our literature on Prest-O-Lite and our automatic lighter with full particulars and "Light on the Lighting Problem" giving the **real facts** in **all** lighting systems, are yours for the asking.

Try It for 30 Days Free

Any Prest-O-Lite dealer will equip your car with Prest-O-Lite and let you use it 30 days. If at the end of that time, you find any of our claims untrue, or are not satisfied in any way, he will take it off your car, refund your money and the 30 days' use is yours absolutely free.

THE SMALL FARM AMERICA'S HOPE.

In common with thousands of others I am strongly impressed with the belief that the subject of better farming in America is the most important now occupying the attention of the commercial world. By better farming is meant a system that will produce larger profits and an easier living for those who till the soil, as well as a greater acreage production.

Modern farming, as the author views the subject, requires varied information as well as unflagging zeal and industry. It needs the application of commercial ideas. Real success in agriculture can only be attained by keeping up with changing conditions and developing a well-balanced business program to go with the tilling of the soil.

Farm life need not be more irksome than clerking or running a typewriter. It ought to be made much more attractive and it can also be vastly more profitable than it is. Better homes and more social enjoyment, with greater contentment and happiness, will come to dwellers in the country when they grasp the eternal truth that they have the noblest vocation on earth and one that may be made to yield an income fully as large as that of the average city business man.

Farm life need not be more irksomely strong, both to the man in the country and the resident of the city. It is, in fact, the hope of the American farmer and of the business world today. Through this modern system the rural family is to escape much of its drudgery, and the city family is to obtain commodities at lower prices. By the new method of intensive and diversified agriculture, country life is to become easier and more attractive both to the young and to the old.—C. C. Bowsfield in "Making the Farm Pay."

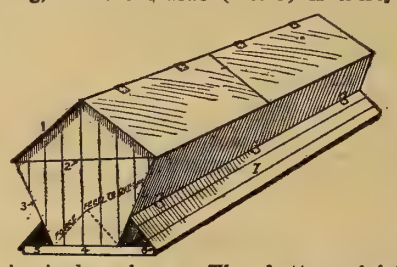
A SELF-FEEDER.

A South Dakota subscriber, Mr. Charles King, has had remarkable success in handling hogs with what might be called the dry-feed method and he sends the accompanying sketch of his homemade self-feeder. This feeder is sixteen feet long and it holds sixty-five bushels. By referring to the numbers on the sketch the important measurements as used by Mr. King may be learned. The rafter (No 1) is twenty-four inches long and the tie (No. 2) is forty-one inches long, while the side (No. 3) is thirty-



six inches long. The bottom joist (No. 4) is thirty inches wide at base, being made of three 2x10x16 pieces. The trough (No. 5 and 6) extends out six inches from where the feed comes down, while the trough door (No. 7) is seven inches wide. This hangs from two strap hinges and it should project over the edge about one-half inch. One side of the roof is placed on hinges and it is better to have it in two parts, because it is more easily lifted at filling time. If this filler is kept inside, ordinary roofing may be used, but if it is to be placed outside, the roof should be covered ith sheet metal.

IOWA WEATHER AND CROP BULLETIN.

The following climate and crop bulletin is issued by the Iowa Weather and Crop service from the central station at Des Moines, for the week ending May 18, 1913:

Reports from nearly all parts of the state tell about the same story of cool, cloudy weather, frequent and heavy showers and delayed farm work. The temperature was, however, but slightly below the normal over the southern half of the state, and the rainfall over the southern tier of counties was considerable less than one inch. Over the northern sections the temperature was 4 to 8 degrees below the seasonable average and the rainfall was much in excess of the normal, especially in the west central and northwestern counties where creeks were out of their banks and much bottom land was flooded. Probably not more than one-fourth of the corn has been planted, and there is much ground yet to be plowed. Except for delaying planting and plowing, the rains have been generally beneficial. All small grain and grass crops are in excellent condition. Orchard and small fruits are unusually promising.

The progressive farmers around Pequot, Minnesota, have a farmers' co-operative club, of which J. B. Fulton is secretary. The club has now organized an up-to-date-co-operative creamery and will have a co-operative shipping warehouse next fall, so that the members can deal direct with the consumer on practically everything they grow. Particulars of the club will be given to any one interested, by the secretary.

ENJOY A VACATION IN THE BLACK HILLS

The wonderful Black Hills of South Dakota afford an ideal locality for rest and recuperation.

Hunting, fishing, horseback riding over wooded mountain trails, bathing in the medicinal waters of the hot springs, are all to be enjoyed in a glorious climate and amid splendid scenery.

POULTRY DEPARTMENT

THIS department is edited by a competent poultry man, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

WORMS CAUSED BY INFECTION

Mrs. Biram Warren, of Putnam county, Missouri, sends the following inquiry:

Our chicken are bothered with a little worm just under the skin on the neck and this causes the feathers to drop out. Please tell me the cause of this worm and the correct treatment.

The worms in question are the result of, and not the cause of, the trouble. It is rather difficult to distinguish between favus and scabies, though we suspect the latter. The scientific name for this mite is Sarcoptes laevis. The tenacious character of the parasite causes it to be hard to combat and it frequently causes a diseased condition of the skin, sometimes becoming so infected as to cause the "worms" just as worms are found in a neglected wound or sore. We once had a turkey hen so badly infected that she died.

Both mites and worms are under the surface and to be reached must be treated with oils that are very penetrating or well rubbed in. The simplest, and at the same time a good, treatment is coal oil and linseed oil. The proportions may be varied according to the urgency of the case. In this flock it is advisable to use rather severe measures. Try equal parts. The kerosene removes the dead, scurfy matter and the linseed oil prevents irritation. Rub the affected parts thoroughly, using a swab. If there is an abrasion of the hand it is possible for the poultry keeper to become infected. Apply every day and if the treatment causes too much rawness lessen the proportion of kerosene.

This mite is to be found more or less in all flocks of poultry, but causes no serious trouble until conditions are favorable for them to increase. If fowls use wood ashes for a dust bath it is prone to absorb the oil of the feathers, causing them to become brittle and break off. This trouble may also be caused by fowls not having access to fat-forming foods. Lack of oil in the skin causes the feathers to be lifeless. Any one or all of these causes would make the fowls susceptible to an attack of scabies.

The hen house is usually the most negected outbuildings on the average farm, and yet the occupants of said hen house usually return a greater net profit than any other source of income. If the hen house is not kept clean the mites are sure to increase, and where mites are thick the chicken business cannot prosper. We have a job waiting us this afternoon in our hen house, hence this paragraph.

TELLS WHY CHICKS DIE

J. C. Reefer, the poultry expert, of 1681 Main St., Kansas City, Mo., is giving away free a valuable book entitled "White Diarrhoea and How to Cure It." This wonderful book contains some new scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. Everyone interested in poultry should certainly write Mr. Reefer for one of these valuable FREE books.

$25 to $40 SAVED

Here's the machine that fits in with my idea of what a separator ought to be—the right price and the right quality. The Beatrice stands alone on the separator market as the one high-grade separator at a fair-play price. Instead of paying $100 to $110, I paid $75 for 1000 pounds capacity. I have yet to find a more efficient and durable machine.

BEATRICE
Cream Separator

It's no trouble at all to keep it as clean as a new pin and perfectly sanitary. The patented device will clean the machine and make it spotless *in less than 2 minutes.*

The close skimming it does is surprising. My skimmed milk doesn't show a particle of cream. The occasions I have had to put my hand in my pocket for repairs have been exceptionally few and far between.
—Farmer Onswon.

600 lbs. Capacity $55
800 lbs. Capacity $65
1000 lbs. Capacity $75

If you don't know the Beatrice, it will pay you to get acquainted. If your dealer can't introduce you, just write

THE BEATRICE CREAMERY CO.,

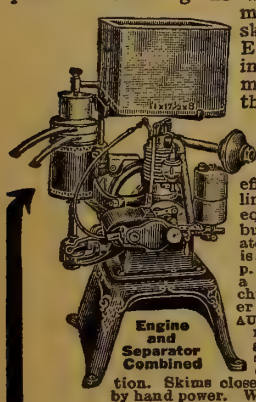
"The 1913 Automatic" Cream Separator
Only One of Its Kind

Skims faster than ten men can milk; requires no cranking—no watching. When milking is done skimming is done. Every farmer milking eight cows or more should have the facts about the



"AUTOMATIC"

It is driven by an efficient little gasoline engine, magneto equipped; solidly built into the separator itself. The engine is a little wonder; ½ h. p.; can be used to run a washing machine, churn and do many other farm chores. The AUTOMATIC is gearless, nothing about it to get out of order. Bowl spins for hours without a trace of vibration. Skims closer than can be done by hand power. Write for catalog. 7

THAT OTHER SILO.

To the Editor of The Homestead:

I do not know but we will have to put up another silo. It seems as if the first one has spoiled us. The first one was put up last fall. Before that we had felt that perhaps the silo question was more or less a matter of being out of the fashion. Then, too, some of the best farmers we had around us, men in whom we had confidence, told us they did not want any silo. By growing corn and cutting it dry as needed they could get along all right. One man went so far as to say that cornstalks do not lose much of their feeding value if allowed to stand out in the field all winter and cut as they are hauled in for daily use.

But this man never had had a silo. He was not acquainted with the benefits. We can see that now. So after the close of the first winter's work we are more in favor of the silo than we were last fall. Why should we not be? We have seen the effect of feeding corn that was sweet and full of juice. The larger flow of milk is an argument that is very difficult to get over. The cattle eat it with such relish and show their appreciation of our efforts to meet nature's demands upon them by putting more milk and better milk into the pail right along, and that, too, while butter has been bringing a good price. The silo does that for us, anyway. It makes winter dairying a profitable possibility.

But what about the second silo? Well, it stands just like this: There never has been a year since we came on the farm when the cows did not shrink quite badly along about the month of August. Then the pastures began to get short. The grass which was left was hard and woody, quite unlike what it had been early in the season. The flies, too, were more troublesome. The heat of the long summer days made it harder work for the cows to travel about the pastures. Once they had filled themselves up, they liked to creep off into some shady place and lie down to chew the cud and enjoy themselves.

So the flow of milk dropped off quite seriously. It took me a good while to really know what this meant. I was like many others: I just took it for granted that this was a part of the season's program. Cows had always fallen off in the late summer, and they would always do so; no help for it. Nature must have her perfect work. Why try to interfere with her?

Then came the summer silo. Just when the need was greatest, by opening the silo of corn feed put up last fall men could keep up the flow of milk, and that was a grand thing; for, finally, I learned how difficult it is ever to get a cow back on her normal flow of milk after she has once dropped off. The silo helped to maintain the milk yield and so prevented the dropping off of the milk and butter checks. The second silo did what never had been done for these men before.

So we are seriously considering the second silo. I do not know whether or not we will get around to build it this season or not. There are some other things that seem to stand first. One of these is to bring a spring of water down to the buildings. It may be that will be about all we can do this year. But if I do not miss my guess the new silo is in the near future.

E. L. Vincent.

PRODUCING CLEAN MILK.

To the Editor of The Homestead:

The standard and purity of milk is usually estimated by the number of bacteria present. The smaller the number of bacteria the more pure the milk. Near one of our large cities lives a milkman who makes a specialty of producing pure, sweet milk for babies. He is conscientious and painstaking and unquestionably produces the highest grade of milk on the city market. The city health department makes tests on all the milk offered for sale. They report the number of bacteria per cubic centimeter. Usually, the man mentioned above has a report

DE LAVAL CREAM SEPARATORS

No Excuse for any Cow Owner Being Without One

There is no reason why any cow owner who sells cream or makes butter should be without a cream separator and there is no excuse why he should not have the best separator.

Any creameryman or experienced dairyman will tell you that a good cream separator will give you a great deal more and a great deal better butter than you can make with any gravity setting system, and equally, of course, more and better cream, if you are selling cream.

The DE LAVAL is acknowledged by creamerymen and the best posted dairymen the world over to be the **"World's Standard"** and the one and only separator that always accomplishes the best results possible and always gives satisfaction.

You cannot make the excuse that you can't afford to buy a De Laval, because it will not only save its cost over any gravity setting in six months and any other separator in a year but is sold either for cash or on such liberal terms that it will actually pay for itself.

A little investigation will prove to you that the truth of the matter is that you really can't afford to make cream or butter **without** the use of a DE LAVAL cream separator.

The nearest De Laval local agent will be glad to demonstrate this to your own satisfaction, or you may write to us direct.

(15)

of about 10,000 bacteria. Others run as high as 125,000 per cubic centimeter.

It was to tell the story of that man producing milk with a wonderfully low bacterial content that these short paragraphs were started. Absolute cleanliness was his watchword. At a fair prizes were to be given for milk exhibited in the purest and sweetest form. Determined to win the prize he began in advance to prepare for it He selected four healthy heifers to be milked for the sample. They were heifers that had previously given a very uniform grade of milk. They were cleansed very thoroughly by currying and brushing. Then they were put into a clean milking barn that had been disinfected that day. The cows' udders were wiped off with a weak solution of carbolic acid. That was not sufficient. The bodies of the cows were covered with thin muslin sheets with openings only for the teats. The milker dressed in a clean, white suit and disinfected his hands before milking. The milking was done into a pail with a very small opening. The report of those who examined the milk was that it contained ninety bacteria and was as free from foreign matter as any milk ever produced.

This same man has astonished experts in other contests. Years ago he exhibited milk at a contest 1,500 miles from his home that was so low in bacterial content that other milkmen had experts looking for the preservative he had used. He had used no preservative. Cleanliness is his watchword. With him "eternal cleanliness is the price of clean milk." His barn is cleansed and aired out after each milking. The cows run in an open shed. They are brushed off before each milking. He produces clean milk by having clean cows, a clean barn, clean men and clean utensils.

H. E. McCartney.

FAVORS CONDENSERIES.

To the Editor of The Homestead:

I noticed in a recent issue of your paper a request for comparisons on selling milk to condenseries and cream to the creamery. We have had a creamery here for a number of years until two years ago. Four years ago they started a condensery, but I had always patronized the creamery and continued to for about four months after the condensery started, until I began to figure what I was getting per hundred pounds for my cream at the creamery and the price per hundred pounds for milk at the condensery. I found that I could make from forty-five to fifty cents more on the hundred pounds on the average by selling to the condensery and that the trouble to separate the milk and clean the separator twice a day would offset the worth of the skim milk. So I quit selling to the creamery and I guess most of the farmers thought the same for it put the creamery out of business.

Dallas Co., Iowa. C. W. Patch.

WHEAT PROSPECTS GOOD.

Present prospects are for the largest winter wheat crop ever produced in the United States. The condition of the crop, reported by the Agricultural Department at Washington, is 91.9 per cent, which compares with 91.6 a month ago, and 79.7 a year ago and a ten-year May average of 85.6. With two exceptions it is the highest May condition reported in fifteen years. The area remaining for harvest is 30,938,000 acres, which is 1,449,000 acres less than the area sown last fall, and 4,367,000 acres greater than the area harvested in 1912. The area abandoned is the smallest in fifteen years, except in 1908.

If the present condition is maintained until harvest the crop promises to be about 540,000,000 bushels. Allowing for a normal impairment between now and harvest (the average of the past five years is 51.1 per cent) the crop will be about 513,500,000 bushels 113,500,000 bushels more than the crop of 1912, and 73,500,000 bushels more than the average of the past five years.

Crop conditions are really better than the government report indicates, because of the abundance of moisture in the soil which makes it almost certain that no important impairment will occur during May.

5 Big Reasons

It wasn't just an "accident" or a matter of "luck" that made the Saginaw the leading Silo. There are reasons. Good reasons. FIVE good reasons. Here they are: **The Patented Angle Steel Rib, the Spline-Dowel, the Saginaw Base Anchor, the Saginaw Inner Anchor, and the All-Steel Door Frame.** No wonder the Saginaw laughs at wind storms. No wonder 587 Saginaws have been sold in a single day. No wonder five big factories are needed to supply the Saginaw demand. Farmers and Stockmen all over the country are simply delighted with the "Saginaw." And you will be, too, when you get our Book which pictures and describes the Saginaw. The Book is **FREE.** Send a postal for Book No. 34 and it will come by **return mail.**

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

BLOODY MILK.

(1) Have a cow that gives bloody milk at times and other times she seems all right. The affection seems to be only in one part of the udder. She has been that way for about two months and so far I have not given her treatment. (2) Also have a steer that is lame in the pastern joint of right fore leg. The leg has broken now a little below the joint and is mattering freely. I could not see where anything had run into the foot. The affection, however, seems to be in the joint rather than the foot.

(1) Dry off the quarter, as it is incurably affected with garget. Twice daily rub that quarter with a mixture of equal parts of camphorated oil and fluid extract of belladonna leaves. It is good policy to test such cows with tuberculin, as tuberculosis of the udder may be present. (2) Poultice the parts with hot flaxseed meal for a few days and inject peroxide of hydrogen into the discharging places each time the poultice is changed daily. When discharge ceases rub the swelling with iodine ointment once daily.

OVERHEATED HORSE.

(1) A five-year-old bay driving horse pants considerable when at work and also on real warm days when he is not at work. I had him clipped last year, but it did not seem to do any good. Has his wind been hurt or do you think he has been overheated? (2) He also galls. What will prevent galls on his shoulders? Have a nine-year-old black horse that pants quite badly and although his coat turns dead and brown he does not shed off. He is in poor condition. Last fall he picked up some, but this winter had some bowel trouble that took him down. His appetite is not very good and although he eats grain and alfalfa pretty well he will not eat timothy hay.

(1) The horse has been overheated and will never be quite well for work in hot weather. Have him clipped spring and fall. Work him in cool of morning and evening. Do not feed any bulky feed at noon or work him soon after a meal. Allow drinking water often. (2) Wash shoulders and neck twice daily with strong alum water or a lotion composed of half an ounce of tannic acid in half a gallon of water and make the solution stronger if found necessary. Mix half an ounce of granular hyposulphite of soda in the feed night and morning for ten days. Do not feed corn or grass; but he may have oats, bran and hay. Treat both horses in the same way. Have the teeth of the thin horse attended to by a veterinarian.

GOITER.

I have a three-year-old bay mare that has been ailing for six or seven months. She eats well and is in good flesh, but it is impossible to drive her much more than a mile or quarter of a mile if I let her trot. She seems all right on the start, but before she goes very far she seems to give out and cannot get her breath. Her neck seems to swell on each side all along the windpipe from her head to her breast. This is gradually growing larger.

Without an examination we cannot be sure what is the matter; but it may be a case of goiter (enlargement of the thyroid glands). It would be best to have an examination made by a veterinarian; but if that cannot be done give her a dram of iodine of potash twice daily in drinking water for five censecutive days a week, for two or more weeks. Clip off the hair and rub the enlargement with iodine ointment two or three times a week.

Short-horn bull, Challenger, at the head of John M. Bay's Sunny Slope herd, Aledo, Ill. Sons and daughters of this good bull are listed for Mr. Bay's sale to be held June 4th, the advertisement of which will be found on page 21.

THIS WILL PROVE
That Your Hogs Have Worms

E. Myers, President, E. Myers Lye Company

For years and years I have been telling you farmers that a great part of hog sickness can be traced directly to worms—just ordinary, every-day **hog worms.** Yes, sir! and what's more I say to you that many of the hogs you own have worms **right now,** unless you have already cleaned them out with MERRY WAR POWDERED LYE.

Here's an easy way to **prove** the absolute truth of that statement: Go to your dealer's and get a 10c can of

Merry War Powdered Lye

Mix ¼ of it thoroughly with one barrel of swill and feed from it **twice each day, night and morning.** If your hogs are on dry ration, mix ½ can in each barrel of drinking water. You'll shortly see vast quantities of dead worms coming away from those hogs. **Seeing is believing.** You can't get away from **facts.**

Now then, as a practical farmer, do you believe that a hog can be well, thrive and put on fat—in fact, can he **live** long, if he's filled with worms? **Not much—he can't!**

Another thing: Don't imagine that just because your hogs are beginning to fall off in weight, snoop around, droop their heads and tails, cough and refuse to eat, that they have cholera. It's very likely worms—and you can easily and quickly **prove** it in the **safe** and inexpensive way I have pointed out.

So don't lose your hogs—it's not necessary. And don't vaccinate your hogs simply because you think they have cholera. **Vaccination won't kill a single worm.** And, take my word for it, **if you rid your hogs of worms they will be in prime strength to resist hog cholera.**

This Man Tried It And Knows

A. U. PATE, Blue Jacket, Okla., writes: "I have been feeding MERRY WAR POWDERED LYE to my hogs for worms. It beats anything I ever saw." Hundreds of other practical hog raisers have written telling of similar experiences with MERRY WAR POWDERED LYE as a destroyer of hog worms. Read their letters in our free booklet.

10c a Can at all Dealers MERRY WAR POWDERED LYE is for sale at most grocers, druggists and feed dealers everywhere, 10c per can (120 feeds). It is convenient to buy in case lots—4 dozen cans $4.80. **Costs only 5c per hog, per month, to feed regularly**—by far the best and much the cheapest hog insurance you can buy. If your dealers can't supply you, write us, stating their names. We will see that you are supplied and also send you, **free,** a valuable booklet, "How To Get The Biggest Profits From Hog Raising." **Order direct from us in case lots (4 dozen cans $4.80) if your dealer won't supply you.**

There Are No Substitutes

Don't experiment with ordinary, old-fashioned lye. **It might prove dangerous.** MERRY WAR POWDERED LYE is the specially prepared lye that is **safe** to feed to hogs. Full directions on each can.

Which Kind Do You Want?

E. Myers Lye Co., Dept 80 St. Louis, Mo.

A GUARANTEED REMEDY FOR BONE SPAVIN

Not a cure-all but a **specific remedy for bone spavin.** We do not claim that it will cure ring bone, splint, cracked hoof and a thousand and one other things as many so-called spavin cures are recommended for. Bo-Spav-O is a specific remedy for **bone** spavin, and it **does the work.** Perfected only after years of careful study and experimenting by a successful veterinarian and practical liveryman. Tested in hundreds of cases before being put on the market. Sold throughout Wisconsin for three years and not a single failure.

This great remedy can now be had by every farmer and horse owner at reasonable cost. The remedy is simple and easy to apply. Does not blister, nor leave a scar or blemish of any kind. Removes and completely cures a bone spavin in three weeks.

ABSOLUTELY GUARANTEED

WITH THE EDITOR.

With the housecleaning finished, the garden well under way and the rush of the fruit season not yet upon her, the woman of the house may take a little time to enjoy herself and store up pleasant memories for the hot season when there is neither time nor energy for outings except of the simplest kind.

Although winter is the time for visiting on the farm, circumstances sometimes prevent women from getting together at that season for what they call a "good visit." What could be more delightful now than for them to meet in some pleasant wood or convenient grove, and there spend the day under the trees with their sewing and their children who will be happy as lambs if allowed to amuse themselves?

In many neighborhoods there is a pretty stream, or a little lake which invites to pleasure outings, and in others there is some place of interest to be visited. When a woman decides on an outing, resolves to have some social life, she can always find an avenue to some Land of Promise.

Last year the farmer's wife who had been confined to the house all winter through illness and bad roads resolved that she would "get things going," to make a change for herself. She arranged with several friends that they should meet at each others' homes one day each week and instead of bringing their work should help their hostess with making or mending as might suit her convenience. To spare the hostess labor of providing luncheon each woman brought something mutually agreed upon. The result was a series of informal parties which brightened up every woman of the group and led to an organization which has since made pleasant social opportunities for the whole section.

"But how can I manage about John's dinner?" asks some loving Martha. If Martha will tell her John that she wants a little holiday and wants him to help her get it she will find him not only willing but glad to eat a cold dinner—or to warm up something left handy.

HOME AND HOMEMAKING.

GIVE AWAY.

Shall we not open the human heart,
Swing the doors till the hinges start;
Stop our worrying, doubt and din,
Hunting heaven and dodging sin?
There is no need to search so wide—
Open the door and stand aside—
Let God in!

Shall we not open the human heart
To loving labor in field and mart;
Working together for all about,
The glad, large labor that knows no doubt?
Can He be held in our narrow rim?
Do the work that is work for Him—
Let God out!

Shall we not open the human heart,
Never to close and stand apart?
God is a force to give way to!
God is a thing you have to do!
God can never be caught by prayer,
Hid in your heart and fastened there—
Let God through.
—Charlotte Perkins Gilman.

GARDEN ON WHEELS.

Our "show piece," all last winter, was a plant box that the children made in the spring for their playhouse, because they wanted to do something in the flower-raising line when they saw their parents at work in the garden, says Suburban Life. A discarded wash boiler was put into an old metal box toy express wagon, where it just fitted. The boiler was half filled with fertilizer from a cow yard and rich soil put on top. Giant nasturtium seeds were planted, and the vines soon covered boiler and wagon. It was easily wheeled from place to place and when winter came was rolled into the dining-room where it retained its beauty all winter, being wheeled out on the porch on sunny days for a sun and shower bath.

FADED FROCKS.

Some one may have a pink cotton or linen dress in good condition, but badly faded. If so, put a piece of turkey red cheesecloth in water and boil until the color is the desired one. The dress, will dry a bit lighter than when wet and will leave an even color all over, says the Modern Priscilla. One-eighth of a yard of cheesecloth is more than enough for a dress. Navy blue cheesecloth may be used in the same manner to freshen the color of a light blue dress. It is best to try a sample of material in the dye to get the right shade before putting in the whole dress.

FOR THE COOK.

Chocolate Pie.—Four tablespoonfuls of grated chocolate; one pint of milk; yolks of two eggs; two tablespoonfuls of cornstarch; six tablespoonfuls of sugar; one teaspoonful of vanilla. Bake the crust, pour in the chocolate, beat the whites of the eggs with one-half cup of sugar. Spread over the top and brown. Delicious served with strawberries or strawberry shortcake.

Devonshire Cream.—Put two quarts of fresh unskimmed milk upon the range in a broad saucepan set in a pan of cold water. Bring very slowly to the scalding point and do not let it boil. That would spoil it. Keep it hot and never so much as simmering for nearly an hour. Then set in cold water and leave it thus, keeping the water cold with ice for six hours. By then the cream should be all collected upon the surface. Remove carefully with a broad skimmer and keep in cool place until you are ready to eat it.

Pieplant Marmalade.—Equal quantities of prepared pieplant and orange pulp, with their own weight in sugar and an extra cupful for the kettle, can be baked slowly to an excellent marmalade. Reduce the heat after the fruit is tender, and let it barely simmer in the sirup. Spice to taste, but taste will go wrong if you leave out mace and cloves. Free the orange peel of membrane, and boil it tender in salt water. This is to remove the bitterness. Throw into fresh water. When cool, pare away the white inside and cook for half an hour in clear water. Cut into fine straw with sharp, clean scissors, and stir the straws well through the fruit. Let cook till they are preserved through. Keep the pan off the stove bottom with a rack or wire shelf and thus you minimize the danger of scorching. Stir occasionally, but only occasionally, and very, very gently. When a drop hardened on a plate shows the right consistency, take from the oven, cool till milk warm, then pack in small jars. They may have paraffin on top, or oiled paper.

AMONG OURSELVES.

As long as the world lasts, as long as men and women marry and give hostages to posterity as the fruit of their union, so long will the subject of children and the various things connected with their rearing and well-being be of interest. All of which means that we welcome Mrs. L., who has ideas on the subject of child-training:

I want to say a few words on the training of children. Love must be the governing rule, but why say it is the rod of love? If we love our children we will punish them as God does his children. And God is love itself. Should we be wiser than God himself to adopt a new plan to show love? It would be no real love if we would not correct them. But to use a rod would indeed be very cruel. Use a switch. It will not hurt the body, just smart on the skin, and it will jerk them up to time if they are not too old before you begin. I don't mean to whip all children all the time, for children are different in disposition and temper. Try to talk and reason with them as long as it will help, but if they get stubborn and won't mind then show them by the switch that you mean that they should mind you. Never tease or provoke them about their faults. Be lovely, but strict with them so they understand it is their welfare and future good you are anxious for. It is right that we owe to our children with birth a good nature, well-balanced character, a healthy body and make their surroundings and environment the best. Even then we cannot rest assured that we have done our part. We need daily to pray for and instruct them, for the evil is still at work in this world.

The friends will not all agree with Mrs. L., but it is good for us to hear those with whom we do not agree. Nowadays there is a reaction beginning against the revulson from corporal punishment which led so many parents to err on the other side. To respect the rights of the child does not mean to allow the child to have its way when that way is not for its good, or even when it interferes with the good of others. It is for individual parents to decide on the course which seems wise for each individual child. And where their experience is likely to be useful to the other parents we are always glad to have them share it Among Ourselves.

Already the country housewife is finding the family washing bigger

Don't Go Through ANOTHER Season Without It

Perry FRESH WATER System

You simply can't afford to do without a Perry Water System any longer. For health's sake—for comfort sake—for profit sake, don't go through another season without one, especially when it costs so little to operate and such a modest amount to install.

JUST TURN A FAUCET HOT OR COLD HARD OR SOFT FRESH FROM THE WELL

For the Home:

Just imagine the pleasure and convenience of having water, FRESH FROM THE WELL—in any part of the house by simply turning a faucet. Hot or cold—hard or soft. Think of the thousands of steps and the drudgery it will save. No water to carry—no cold trips to the well—no more frozen pumps.

For the Barn:

A Perry System soon pays for itself by furnishing plenty of water, at just the right temperature. Stock will drink more—thrive better—cows give more milk—make you more profit. For fire protection alone, it is worth many times its cost—will throw a heavy, steady, continuous stream.

Perry Water System

WRITE FOR FREE CATALOG TODAY

Tells how you can install it yourself—anywhere in small space—use your gas engine for power without moving it or interfering with its other work—completely solves your water supply problem, summer or winter. Absolutely dependable—fully guaranteed—over 4,000 in use. Estimate of cost gladly furnished. Write for free catalog NOW—see for yourself the great advantages of this system.

placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or 6 sent by express prepaid for $1.

HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

each week and many of her is sighing as she thinks of the summer. Perhaps what Mrs. R., has to tell us may suggest a way out for some overburdened one, even now:

I doubt if any task is more irksome to the average woman than a big, dirty, family washing. I know whereof I speak, for I am a farmer's wife, the mother of three little children and do all my own work. Though I had always used a washing machine the washing was done in the kitchen and with only one pair of hands to do the many tasks incidental to washday, at two p. m. I was usually just finishing the washing. After that the house work was to do, porches to scrub, etc., so that Tuesday found me too worn out to do the ironing. Last spring the good man of the house solved the problem by getting a power washer and gasoline engine. These were put in the cellar and as the cellar floor had been cemented and a faucet put in when we piped the water to the house everything was complete. I now can keep my house work going while the engine is running the washer, and the wringer, which can be reversed from washer to tub with one hand, it makes washday a pleasure. I can have everything done now by ten-thirty a. m., and have time to tidy up a bit before dinner. The outfit cost us about $105, the engine being the biggest cost (there are many cheaper engines on the market which will answer the same purpose), but as I do my churning and we expect to do the separating with the same power we consider the money well spent. I hope every man who may read this who has a hard-working wife will determine to get that wife a power washer and engine before the rush of spring work comes on.

There is no more reason why a woman should continue to wash in the old way than that a man should thresh in the old way. Let us get that well into our minds and then we are ready to consider the improved way of doing things. A woman's time and energy are just as precious as those of man. Sometimes it is necessary to sacrifice the woman for a time, owing to the fact that the man is the chief bread-winner. But let it be understood that the woman's needs are to be considered just as soon as it is at all possible to consider them. If the family exchequer is in anything like fair condition the woman should have modern labor savers to relieve her on washday. Let us hear more about such things. I wish more of our women who have water in the house, who have power to run their washing machines, who have easily operated machines that run without "power" would write about these things. Let us keep talking and keep trying to get the men interested and see if we do not accomplish something worth while.

Now, early in the season, is a good time to be thinking about a canning machine. Listen while Mrs. Junkin, of Arkansas, talks about hers:

I have received so many letters asking about canning and my canner that I will try and answer some of the questions through your paper, for I am glad to help others get started in the right way. A high-priced canner is not at all necessary. Mine with capping iron, tipping copper flue, solder, tongs and book of instructions only cost $10. The $6 canners do not include the other necessary things. There is nothing difficult about it with the instructions to go by; in fact, it makes canning so much easier. I can get out under the shade of a tree and put up forty-five cans of peaches, and, of course, more tomatoes, and do my other work and look after my baby in one day, and that just as easy as I can put up a dozen jars in the old way, and not be half melted over the cook stove. I can in both tin and glass and both keep equally well, but for market the tin is best, and always you have to be more careful with the glass to keep them from breaking. The fruit and vegetables are much nicer cooked in the jars. They are not cooked to pieces then and the flavor is much better. The canner I have has pipes on the order of a tubular boiler, so it heats the water in a very short time and will cook as fast as several can prepare the fruit or vegetables, about 150 cans per day. There is a crate that holds ten or twelve cans so that many can be lifted in and out at once. On wash day I put my clothes in the crate and put it in the canner and lift out all at once so it saves work on washday, too. An out-door furnace comes with it, but the boiler can be set on a stove. No kind of preservative is used. Some recipes call for sugar, some for salt and some for a "sweet brine" (salt and sugar). I am glad so many are getting interested in canning. It makes me tired to see canned tomatoes shipped here from New York when they rot in our gardens by the bushels and bushels. If there is any other information that I can give I will be glad to do so. I hope all will enjoy a lot of good home canned fruit and vegetables next winter. If you don't can some yourself buy from your neighbor.

It is inspiring to have such a canning experience related by one who knows by experience what a good canner can accomplish. I remember meeting a man some few years ago who was equally enthusiastic. He got out of work in the early spring time, and as there seemed small prospect of anything like steady employment he rented some vacant land and put in a lot of garden stuff. His hope of finding a market in the village being disappointed, he bought an inexpensive canner and in this way preserved his surplus. He had wonderful success and in the end made more than if he had sold the vegetables green. Here is a hint for those who live distant from market, and also for girls and boys eager to do something for themselves. Let us hear from others and so stimulate our young folks as well as encourage provision for winter vegetable supply.

PLEASANT FIELDS OF HOLY WRIT

Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON

2d Quar. Lesson 8, Gen. 43; 18,19,23-34. May 25, 1913.

JOSEPH AND BENJAMIN—THE STORY.

The fascination of the story of Joseph is that it is true. It is a cross-section of human life. You see the emotions and motives of mankind in action, stirring and impelling. That is what makes it universal and perpetually applicable. It has no provincial or racial limitation. That justifies so long exiled from it. He planned better than he knew. The scenes in this drama are shifted by a master hand. The men with their homely gifts and their youngest brother stand one moment timorously at the viceroy's palace gate. The next, wonderful to tell, they are sitting at table with him in his princely dining hall, arranged in precise order to their ages, not omitting Simeon, the hostage. Their natural trepidation about the money in their sacks has been first quieted, so that they can duly enjoy the feast. They so far forgot themselves that they could even be merry. It is a master stroke in the picture which represents Joseph so touched at the sight of his full brother, Benjamin, as to be compelled to quit the room in haste to shed tears, and on his return to serve five times the variety to Benjamin than to the others. The moral progress of Joseph's brothers appears when they show no resentment or envy at the decided preference given to their half-brother Benjamin. There is a parental benediction for the youngest of their company, but none for them. Five times as much goes from the regal sideboard to him as to the others. But if they note it at all, it is probably with pleasure. Again the health of their father is inquired for, but no special greeting is theirs. If their hearts were as of old, hateful jealousy would have certainly rankled there. Mark their advancement! Joseph certainly did.

THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Aunt Mary, Hawley, Minn.

SPRING: A PROSE POEM.

(First Prize.)

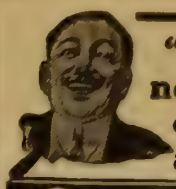
Softly from far away I hear the song of the meadow lark; it is spring. Everything is one sweet song; the low buzz of the busy bees, the cheery chirp of the robin, the soft murmur of the sparkling rill, the gentle sighing of the breeze, all blend in one soft melody.

One hears in every sighing breeze,
The symphony of spring.

'Tis beautiful music, more beautiful than any poet could ever put in words.

But the music is not all, ah, no! What would the world be without the trees; the trees now bending down with their flowery burden? Here pink, here white; how fresh and bright against the soft new green! While towering far above them all the branches of the elm, tinged with red, reach ever upward toward the azure sky and fleecy clouds. Far away on the grassy hillside the sportive lamblets play beside their gentle mothers, and down beside the rill I see a timid rabbit feeding upon the tender grass. A butterfly rests gently on a flower-laden branch, both beautiful and serene as he folds his pretty wings.

Oh, enchanting scene! No artist e'er



"That roof is not going to cost as much as I thought"

Certain-teed

Quality Certified Durability Guaranteed

Roofing in Rolls and Shingles

The users of this modern, easy-to-lay Certain-teed Roofing are saving thousands of dollars—on every roll and crate of shingles is a Certain-teed label of Quality—a 15-year guarantee of Durability.

could paint a picture such as this! And as a perfume rare comes to me from the flowers, I close my eyes in rapture,

For I am satisfied.

—Lois Stewart, Ohio, age 15.

Honesty is the Best Policy.

(Second Prize.)

One night my grandfather came home very late. As he was unharnessing his horse he heard someone in his corncrib which was not far from the barn. He tied his horses to a post and went over to the corncrib to see who was there. He saw a horse tied on one side, and, as he looked around the corner of the crib, he saw a man. He did not make his presence known, as he wished to see who was there and what they were doing.

The man filled a sack with corn as he said, "Honesty is the best policy, but my critter can't starve." Then he was very still for a while as if thinking. He then said, "Honesty is the best policy, and my critter must starve." With that, he threw the corn from the sack, untied his horse and rode away.

The man was a neighbor of my grandfather's, so the next morning grandfather loaded a wagon full of corn and took it to him. He said, "If you had stolen the corn in the crib last night, I would have had you arrested, but as you were honest, this whole load of corn is for you." The man looked very thankful, and said, "Honesty is the best policy."

—Tiddley Winks, Ill., age 14.

My Trip To Colorado.

(Third Prize.)

When I was five years old I went with my mother and sister to Colorado on a pleasure trip. I had two uncles and aunts living there. We could see Pike's Peak from my uncle's. We visited many beautiful parks, and we went to see the Seven Falls. We went up to where Helen Hunt Jackson sometimes sat under the pines to write her poems, and when she died she was buried there. They showed us the burro that she often rode. We tasted the water in all the mineral springs. A little girl lived next door to my aunt's who was seven years older than I. She gave me a little dish; it was white and blue striped. I brought it home with me, and have it yet. One day I went to see the Garden of the Gods. It was a beautiful place. We stayed in Colorado a month.

HAZEL, AGE 5.

—Hazel French, Ia., age 13.

HOG FARM EQUIPMENT AND METHODS.

(Continued from page 3.)

nually. As a consequence there is a constant increase in fertility of the farm and a pleasing production of better crops.

While not all farmers are prepared to handle stock in the same proportion as in this instance there is no controverting the fact that the failure to keep cattle in greater numbers is responsible for decreased productiveness on many otherwise well conducted farms. There is no demand for expensive equipment or intricate methods. The exercise of common sense and an adoption of materials at hand and existing conditions are the essentials.

"Can't-Sag" Gates Save You BIG MONEY

Alvin V. Rowe, Pres.

Cost only one-third as much as ordinary iron, wire or gas pipe gates, but last twice as long. Neat in appearance—best and strongest gate made—light, easy to handle, opens both ways. Boards are double *bolted* between eight angle steel uprights and double truss braces. *guaranteed never to sag.*

Cost Less Than All Wood Gates—Last 5 Times as Long

Can't Sag Gates are furnished complete, ready to hang, or just the Gate Steels which include everything except the boards. Patent self-locking hinge feature—reinforced two piece malleable hinges. Six Triangular Truss Braces make gates extra strong.

Improved Elevating Attachment permits the gate to be raised full length from 5 to 30 inches, so small stock can pass under, and to swing over snow.

30 Days Free Trial and 5 Year Guarantee

Catalog shows both complete Gates and just the Steels, at prices you can't afford to miss. Send for my new catalog with free 30 days' trial and *freight prepaid offer.*

"Can't-Sag" Gates & Steels

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

4971 Children's Dress.—This dress is very simple to make. It is made in one piece, and slips on over the head. It is made with low neck and short sleeves. Linen, gingham or percale can be used to make this dress.

The pattern 4971 is cut in sizes 2, 4, 6, 8 and 10 years. Medium size requires 2⅛ yards of 36 or 44-inch material. Price of pattern ten cents.

4619 Children's Set of Short Clothes.—This set consists of a dress, drawers, petticoat and sack. The dress is made with a yoke. Lawn, muslin or cashmere can be used to make the dress. Any of the wash materials can be used to make the petticoat, drawers and sack.

The pattern 4619 is cut in sizes ½, 1, 2 and 3 years. Size 2 years requires for the sack 1 yard of 36-inch material, for the dress 1⅞ yards of 36-inch material, for the petticoat 1¼ yards of 36-inch material, for the drawers ¾ yard of 36-inch material. Price of pattern ten cents.

4786 Children's Rompers.—This garment can be made with high or low neck and with either the long or short sleeves. Linen or gingham can be used to make the rompers.

The pattern 4786 is cut in sizes 2, 4, 6 and 8 years. Size 6 years requires 2½ yards of 36-inch material with 4½ yards of braid. Price of pattern ten cents.

5775 Ladies' Waist.—This waist can be made with either the high or low neck and with long or short sleeves. It is made with deep arm holes and may have either the empire or regulation waist line. All-over embroidery or linen can be used to make this waist.

The pattern 5775 is cut in sizes 32 to 42 inches bust measure. Medium size requires 2½ yards of 36-inch material with 1⅝ yards of plaiting. Price of pattern ten cents.

5779 Ladies' Shirt Waist.—This shirt waist is made in middy style. It is made so that it can be slipped on over the head. Linene, madras or serge can be used to make this shirt waist with the collar and cuffs of contrasting material.

The pattern 5779 is cut in sizes 32 to 42 inches bust measure. Medium size requires 2 yards of 44-inch material with ¾ yard of 24-inch contrasting goods. Price of pattern ten cents.

A CHANCE TO BECOME A MEMBER OF A COMPANY MANUFACTURING WELL-KNOWN GOODS MANY YEARS IN MINNESOTA.

FIELD NOTES.

W. Doolittle, Woodland, Mo., pays express on O. I. C. pigs shipped at weaning time. His is one of the good herds.

F. W. Haning, Truman, Minn., is offering Red Polled bulls, including his present herd bull for sale. His advertisement appears on page 21 of this issue.

Chester White fall boars and sows are advertised for sale by A. C. Orme, Nodaway, Iowa, on page 22. He is pricing these at $25 each. Write him at once if you want one.

John I. Dripps, Springville, Iowa, is offering eggs from his White Rocks of official strain from his foundation stock which cost $20 for the cock and $8 each for the hens. His White Leghorns are extra good layers. Send him your order and you will be pleased with results.

W. M. McLaughlin, Shelby, Iowa, is offering some choice Scotch bulls for sale among which is a good herd bull that any breeder can afford to buy. Go and see these bulls as soon as you can and if you are on the market for a herd header you will buy one from Mr. McLaughlin.

Some splendid young Short-horn bulls are offered for sale by J. G. Westrope, Harlan, Iowa, on page 23 and he is making prices on these that any farmer can afford to buy. Make it a point to go and see these bulls as soon as possible or send him an order and let him pick out your bull.

The attention of those who are interested in Guernsey cattle is directed to the advertisement of the Wilcox & Stubbs Company, on page 12. These gentlemen are now offering for sale a number of registered cows and heifers as well as several bulls of serviceable age. Address letters to Wilcox & Stubbs Co., Des Moines, Iowa.

F. Bollman, Wall Lake, Iowa, is offering Scotch Collie puppies for sale as will be noted in his advertisement in the proper department. T" pups are two months old and their sire and dam are first-class workers and good watch dogs. They are sable and white and black and white, healthy, lively and correctly marked. Note prices in the advertisement.

The 5A Nottingham horse covers advertised on page 13 should be considered essentials on every farm during the summer season when they go far toward protecting horses from the attacks of flies. Most dealers can furnish them. They may be obtained, however, direct from the manufacturers, Wm. Ayres & Sons, Philadelphia, Pa.

John I. Dripps, Springville, Iowa, has been advertising eggs from his fine flocks of White Rocks, Barred Rocks and White Leghorns. He can still supply the wants of our readers. Mr. Dripps has a herd of forty-five Holsteins, a flock of 100 Shropshires and an excellent herd of big-type Poland Chinas. Only the best of pure-bred stock is given a place on his farm. More information regarding his Polands will appear in this journal shortly. See page 10.

The Sterling Poultry Farm, Sterling, Ill., in instructing us to continue their Single and Rose Comb Rhode Island Red advertisement appearing elsewhere in this departments, write: "We have over 400 little chicks and 3,100 eggs sitting, twenty hens and eight incubators. We have about 400 Single and Rose Comb Rhode Island Red breeding birds and will have about 200 hens to sell at from $1 to $2 each after June 1st. Our eggs are hatching well and the chicks are strong. We have won nine silver cups, including sweepstakes and color and shape specials at large shows. Our birds are heavy layers and are housed in open-front houses."

G. H. Tutt announces on page 21 that he is now prepared to furnish customers with twelve or fifteen extra good Chester White bred sows. Some of these have been bred to farrow soon to a son of the grand champion sow at the Iowa State Fair of 1912. This hog is one of the two offered for sale. The other is Counselor 21783, a great big fellow with an eleven-inch bone and right every way. Mr. Tutt's stock comes from foundation that possesses size, bone and quality and is sure to be profitable to buyers. Address inquiries to G. H. Tutt, Marathon, Iowa.

One of the pleasures of driving an automobile is to be able to cover new roads at night, which is really the most agreeable time for pleasure travel. The essential thing, however, is a good light, one which is dependable at all time. The advertisement of Prest-O-Lite, which appears on page 7 presents the claims of that method of consideration. The big statement is made that no other light is so cheap, so good, so dependable or any more convenient. It would seem that little is left to be asked if these claims are fulfilled. That they will be is made plain by the remarkable guarantee under which it is sold. Read the advertisement. You may try Prest-O-Lite for thirty days free and any dealer will equip a car without additional charge. At the end of that time, if it should not be satisfactory your, money will be refunded. For all information with reference to Prest-O-Lite address the Prest-O-Lite Co., 420 East South St., Indianapolis, Ind.

In these times much of the success in growing plants and fruits depends upon the use of insecticides at the proper period. A special sort called Bug Death is advertised on page 5. It has many advantages. Complete descriptions may be obtained by writing to Danforth Chemical Co., Leominster, Mass.

There is always room for more information on the subject of corn culture. A good deal of it, and that of a character which makes it of value to every farmer, is contained in a new book called "Corn Facts." It is advertised on page 7 and may be obtained by writing to Ballor Plow Co., 1345 Main St., Atchison, Kan.

The cream separator advertised by the Beatrice Creamery Company and page 11 is one which, in simplicity and effectiveness, has few equals as shown by its enviable reputation. It is made in three sizes and sold at remarkably low prices. For catalog address Beatrice Creamery Co., Des Moines, or either of the offices named in the advertisement.

French dry cell batteries are advertised on page 7 of this paper. These have to do with furnishing electric light for farm purposes. Sometimes the advertisement gives a good deal of interesting information. Other valuable and important facts bearing on the subject may be secured by lling out the coupon at the bottom of the advertisement and mailing it to French Battery & Carbon Co., 2 Inca St., Madison, Wis.

Health, convenience and economy all unite in demanding that every farm home be supplied with a system for providing fresh water for household purposes. The Perry Fresh Water System advertisement on page 10 is one of the most successful that can be obtained. Read the advertisement fully. Additional facts may be learned in a free catalog, for which write to United Power & Pump Co., 487 Colony Bldg., Chicago, Ill.

The Northwestern Milling Company, Minneapolis, as a means of creating interest in the Ceresota flour which they manufacture, have prepared and published in attractive form the Ceresota cook book, which contains a number of remakably good recipes and these are presented in such form as to be easily understood and make their success sure. All instructions for mixing ingredients are paragraphed and numbered in their proper order. This, of course, prevents any variation in results and make the preparation absolutely plain. The book may be had free by writing to the address named above.

Buy Bulls Young.

Geo. S. Redhead, Des Moines, Iowa, has for sale a number of high-class Jersey bull calves. Those who buy these calves may have them shipped in crates, thus reducing the cost of express charges most materially. Complete descriptions and special low prices for sales this month may be obtained by writing to Geo. S. Redhead, Des Moines, Iowa.

Irvinedale Farm Spring Importations.

After a most satisfactory trip to France and Belgium, Chas. Irvine may now be found at Irvinedale Farm with something like forty head of Percheron and Belgian horses, to which he invites the attention of prospective buyers. Mr. Irvine was among the first Americans to visit the Percheron-producing territory this year, and having the pick of 250 Percherons that were offered for sale, he obtained some magnificent gray two-year-old stallions and mares that have both size and quality as well as other characteristics that good horse buyers are looking for. In Belgium he picked up a few of the tops of two-year-old stallions and some of the best mares that were for sale. Among the latter are a pair that have won several first prizes at the big Belgium shows. The Irvinedale Farm advertisement will be found on page 21. With forty head of stallions and mares of the two breeds named, buyers may certainly find something particularly attractive. As the number of animals is rather more than can be well cared for some prices below competition will be offered for quick sales. Buyers will be met at Ankeny which is reached by the Chicago & Northwestern Railroad and the Fort Dodge Electric line. Address inquiries to Chas. Irvine, Ankeny, Iowa.

Schug's Poland Chinas.

One of Nebraska's foremost breeders of Poland Chinas who has a good crop of pigs this season is R. A. Schug, Coleridge, formerly the owner of the grand champion boar, King Mastiff. Mr. Schug sold the old boar some time ago at a long figure and now has at the head of his herd the great young hog Great Columbus. This boar is a son of Tim Neuhofel's great show and breeding boar, The Big Orphan, and he is out of Lady Rose 2d, the dam of that sensational litter that Mr. Neuhofel had out last fall. He is one of the best sons of The Big Orphan we have ever seen. He is going to be large, has a splendid arched back, decidedly masculine in his makeup and stands on the best feet with his legs under the corners. He has all the ear marks of making a splendid herd boar. He has seven litters by him and they look good at this time. He also has three litters by the old champion King Mastiff and these are very promising pigs. He has a number of litters by Nebraska Model and a few by a boar called Big Kind, he being a son of Crow's Kind, also one litter by Farver's Goliath, that well-known boar at the head of the Farver Bros.' herd at Ocheyedan, Iowa. Mr. Schug has a splendid line up of brood sows in his herd and he has quite a number of fall yearlings that he will hold for his winter's sale. Later in the season he will have some good boar pigs to offer and we will then tell you more about them.

Angus Bull Bargains.

On page 23 H. R. Davis, Corning, Iowa, advertises some good young Aberdeen Angus bulls for sale. He has a two year old sired by Blackbird Dan and several younger bulls sired by Sir Blackbird. As he wants to dispose of these bulls he is therefore making the price right. Write him at once about them or better go and see him yourself.

Short-horn Females for Sale.

In an advertisement on page 21 Geo. D. Harrah announces that he is prepared to sell some excellently bred Short-horn heifers, among them some belonging to the Victoria, Orange Blossom, Duchess of Gloster and other popular families. Buyers will find a large herd to select from and will be met at train if notified. Address inquiries to Geo. D. Harrah, Newton, Iowa.

B. C. Marts has Misfortune.

B. C. Marts, Hampton, Iowa, had the misfortune to lose his barn, hog house and granary by fire on May 10th. No live stock was burned. He had an abundant supply of seed corn that burned and he feels this loss considerably as he had labored hard to select his seed early in the season. The Homestead extends sympathy to Mr. Marts. He has seventy-five nice Duroc Jersey spring pigs that will be in nice shape for the fall and winter trade.

J. H. Barr, the Auctioneer.

With this issue of this paper, J. H. Barr, Hebron, Neb., starts an advertisement in which he solicits a share of the pure-bred auction business of the readers of this paper. The writer wishes to say that Mr. Barr is a man of high character, one that is thoroughly posted on live stock values, and one that understands the principle of expert salesmanship. Mr. Barr has been in the pure-bred live stock auction business for the past several years, and has been crying sales for about fifteen years. The writer has worked on sales with Col. Barr and we want to say that we think him perfectly capable to handle any of the pure-bred stock sales in the country. We know that he has always gotten the high do ar, and that he has always treated his buyers with courtesy and his reputation for fair dealing and honesty is not questioned by those that know him at all. It is this sort of man that the up-to-date breeder and stockman wishes to employ and no mistake will be made if Col. Barr is employed. Give this good auctioneer a trial. If possible place him on your sale that you have already booked as second man, and then decide for yourself if you wish him again. The chances are decidedly in his favor, and you owe it to yourself to have your stock well sold. When writing kindly mention this paper. See page 21.

Saunders Selling Bulls.

In a recent letter from C. A. Saunders, Manilla, Iowa, that well-known breeder of Short-horn cattle, he has the following to say: "I thought I would let the readers of The Homestead know what we have been doing in the bull business of late and am therefore dropping you a few lines. I have just sold a good white bull to Frank Brown, West Side, Iowa, also one to March Bros., Litchfield, Minn. The latter bull is a full brother to Cumberland's Dictator, the bull that we sold to Owens Bros., Homestead, Iowa, in our last sale at $805. We also sold a good bull to Haakon E. Thormedsgard, Alcester, S. D., and another good one to A. R. Fennern, Avoca, Iowa, six to A. N. Hotchkis, Moorehead, Mont., and they were good bulls and at prices that would make the farmers shudder. Three of my best bulls went to S. S. Spangle, Milan, Mo., one to W. M. Smith, West Branch, Iowa, and one to A. L. Clopping, Weston, Iowa. The last three were out of Royal Cumberland, the bull that I sold to the Allen Cattle Company, Colorado Springs, Colo., for $3,000, and I think they were three of the best bulls I have ever sent from the Greeley Stock Farm. I also sold another choice young bull to Howith Bros., Dow City, Iowa, and another good one to J. D. Hanson, Irwin, Iowa. Bull business has been good with us and we have a few more very choice ones to sell. If you want a real choice herd header we are in position to fit you out." When writing Mr. Saunders kindly mention The Homestead.

C. W. Hutchins' Polands.

Many readers of this paper will be glad to learn that C. W. Hutchins, Weeping Water, Neb., has one of the best crops of pigs that he has ever raised. This herd is one that has been built up from the very best stuff that could be had, and the results are apparent in the fine lot of pigs on the place this spring. Mr. Hutchins enjoyed a good demand for his surplus which were advertised in The Homestead last season, and the stock that will be offered this year are still better than those of a year ago, for the reason that most of the pigs from the very best sows, and the earlier ones of them all were lost with the bad weather a year ago. This season he has saved a big per cent of all the pigs farrowed. The grand breeding boar, Half Ton 2d, by Hill Croft Halfton is the sire of a number of the good ones, and the remainder are by Long Harve. by Big Tom. Long Harve is out of Wonder's Lady by Big Victor and she is out of Lady Wonder's Best, the great breeding sow of the Lonergan herd. Long Harve is a litter mate to the Geo. Kissinger boar, Big Martin, and the Kissinger boar is rated as one of the best of the state. Mr. Hutchins will make a sale the latter part of October, and will put up a grand good lot of stuff. A couple of good strong fall boars are for sale, and they are by Half Ton 2d. They are priced where any farmer can buy. When writing mention The Homestead.

ST. JOSEPH VETERINARY COLLEGE

RECOGNIZED by the United States Department of Agriculture. Profession not crowded. Positions open to graduates, state and county veterinarian, U. S. veterinary inspectors, U. S. army veterinarian, teachers in veterinary and agricultural colleges. Private practice unlimited. Veterinary inspector's salary, $1,400 per year. Address F. W. Caldwell, Pres., 4th and Sylvania Sts., St. Joseph, Missouri.

How Will the Tariff Affect Your Wool?

Just now, as new tariff laws are about to be enacted, wool growers everywhere are asking us what will happen to the price of wool. Market conditions are so uncertain that these men want our advice. They want the benefit of our 47 years experience. To keep our 60,000 customers posted and save them from selling at the wrong time, we have decided to issue Special Market Reports right along, until this tariff agitation is over. Each customer will receive, FREE, a copy of each Special Report. But we aim to print, each time, only as many Reports as are wanted. If you, reader, want our Special Reports as are wanted, we will be glad to send them to you free of charge, provided you let us know now, in advance. Please don't get the idea that this puts you under obligations to us. You are welcome to this service, whether you sell your wool to the Mills, through us, or whether you sell to wool buyers.

This is certainly a remarkable wool season, and no man with 200 pounds or more should agree to sell his clip until he knows "inside" market conditions.

WRITE! Merely send name on postal. That puts you on mailing list all season. Our next Special Report is just ready for mailing. If you rush your postal in today, you'll get it. (11)

Poland China Fall Boars for Sale.

The man that is wanting to buy a good Poland China fall boar should read the advertisement of A. H. Windom, Nodaway, Iowa, on page 21 and send him an order right away. He is offering twelve head of boars for sale and they are all sired by his 950-pound boar, Pawnee Nelson, regarded as one of the greatest Poland China herd boars in western Iowa. These fall boars are right and they will make good herd boars. They are out of good sows and they are bargains at $40 and $50. Don't overlook this chance to buy a good herd-boar prospect, but get your order to Mr. Windom at once. Please mention The Homestead when writing him.

Putman & Sons's Durocs.

With a good crop of spring pigs and also a fine lot of fall gilts and boars, Putman & Son, Tecumseh, Neb., are in line for a season of good business. This herd is one of the best known of the country, and their reputation for good hogs is going to be advanced a bit, if such is possible. A nice lot of fall boars, many of them real show and breeding propositions will be for sale from now on. These boars are mostly sired by Put's Top Col. by Morton's Top Col. also Ohio Col., the great breeding boar that has been in use in this herd for some time. One extra choice boar, a herd header of the highest sort and a real show boar as well, is sired by Put's Top Col. and out of Chief's Maid 2d, out of the champion sow Chief's Maid. Chief's Maid 2d is sired by Col. Chief the fifth prize boar at Lincoln last year. Col. Chief has sired a lot of extra good stuff, and this boar we now mention is no accident. He comes of an extra good family. We would recommend him to those looking for a herd boar. Some others almost, if not quite as good, are by Put's Top Col. and out of a daugher of Lincoln Wonder. A junior yearling show boar is Model Chief and Advance bred and he is right. Keep the herd in mind, and remember that if in search of a really toppy fall boar, that this is the place to buy one. Kindly mention this paper when you write.

E. L. Busch's Durocs.

One of the nicest bunches of spring pigs the writer has seen to date are on the E. L. Busch farm at Syracuse, Neb. Mr. Busch has been a buyer of high-class breeding stock for the past few years and is a stockman of ability. The greater part of the spring crop of pigs are by Model Advancer, he by Advancer No. 1 by Advancer and his dam is Model Hope, by Golden Model. This is a line of breeding and a particular cross that has made good. A very nice sow is Lucy's Babe and by Wallace's Wonder has a nice litter by the great breeding boar, Golden Model IV. These pigs are a little late, but they are very fine and thrifty. A sow by High Col. has a very fine litter by Golddust Chief, the well-known boar in use for some years in the herd formerly owned by Fred Steinbach, Yutan, Neb. A nice gilt by the prize-winning Crimson Critic has a litter by Watt's Hero by Watt's Model. About as nice a litter as any is sired by the champion Beauty's Model Top, the boar used and shown extensively by Sheley & Clatterbuck, Missouri. This litter is out of a sow by Col. Primm. Some of the young things that these men have been showing the past season are of this mating. We want to say that Model Advancer is siring some very good stuff and The Homestead readers that buy the produce of this boar will not be disappointed. Mr. Busch will hold a sow sale on February 23d, and the writer bespeaks careful con-

DIAMOND EMBLEM.

Short-horn Breeders

OPPORTUNITY KNOCKS

At Your Door Calling Attention to the

SUPERB OFFERING of BULLS

To Be Sold at the

Bellows Bros. Sale

MARYVILLE, MO.,

JUNE 10, 1913

CORNERSTONE.

sideration for this offering. Mr. Busch will be seen at the state fair this fall. Keep him in mind and do not fail to look for him at that time.

Zimmerman Sells Cloverdale Hadley.

In a recent letter from W. E. Zimmerman, Neola, Iowa, he says: "I have just recently sold my old boar Cloverdale Hadley to Mr. Williams, Silex, Mo., and he is well pleased with him. This boar has been one of the very best breeding boars I have ever owned and his pigs have always been good sellers with me. Some of the very best sows ever sold by Mr. Cavett, the breeder of Cloverdale Hadley, were sired by him. He cannot help but do good for Mr. Williams, as he is not only a good breeding boar, but he is also a good individual. My spring pigs are doing fine and my present boar, Pawnee Price, is going to be a most excellent breeding boar. This hog is a son of Smooth Price and is therefore a half brother to Big Joe and Big Ben in the Fesenmeyer and Pfander herds. I am going to make my sale on September 10th, when I will have one of the best offerings that I have ever sold since I have been in the business. Just tell the boys to remember my sale and say to them that I am going to have as good a line of boars in this sale as anybody will have this fall." We will tell The Homestead readers more about the Zimmerman offering later in the season.

Nash & Son Have a Great Boar.

One of the very biggest two-year-old Poland China boars that the writer has ever seen is owned by Nash & Son, Minden, Neb. This boar is just a little past two years old, in rather spare flesh and weighs over 800 pounds on the scales, as the writer weighed him a few weeks ago. In good breeding condition this boar is now a 900-pound boar and looks like he will go well past the 1,000-pound mark when he is matured. He is sired by one of the biggest breeding boars of the whole Expansion family, namely, Baird's Expansion. He is out of the first prize under-six-months sow, Nebraska State Fair, 1910. She was Model Gem by Big Columbus. Model Gem was also among the very tops if not the top sow of the Baird winter sale of 1911 and was bought by Mr. Nash. Model Gem is now in the herd and one of the great big brood sows of the breed. Mr. Nash is breeding a few sows for fall litters to this great boar, and will sell a limited number. Those that are in search of the extra big will do well to place an order for one of these sows, as they are strong in the blood of the great breeding boar, Chief Wonder, one of the biggest breeders in central Nebraska. There is something over eighty extra choice spring pigs on the farm, mostly by Gold Medal. This is one of the real sow sires of Nebraska today. There are also some by Long Jumbo by Wade's Jumbo by Wintermute's 1,000-pound Jumbo. Nash & Son will make a fall sale October 22d. Should you write kindly mention The Homestead.

Iowa State College.

The advertisement of the Iowa State College will be found on page 8 of this paper. The institution is better than ever prepared to furnish practical education to the young men and young women of the farm. The catalog shows that six four-year courses in agriculture and home economics are provided. There is a two-year course for boys and a two-year homemakers' course for girls. No farm can afford to be without one of these catalogs. Address C. F. Curtiss, dean, Iowa State College, Ames, Iowa.

Bay's Short-horn Sale.

A desirable lot of Short-horn cattle will be submitted at public sale June 4th, at Aledo, Ill., by John M. Bay, who has spent a lifetime in the cattle business. Forty head are cataloged for this sale, and buyers will find them a good lot of cattle. About one-half of the offering is of Scotch breeding, the balance being the best American families topped out with several generations of Scotch sires. There are a number of young things in this sale by Challenger, the good bull at the head of Mr. Bay's herd, that will bear inspection. This bull has proven himself a strong sire, and all of the females of breeding age in the sale are bred either to Challenger or to Roan Goods, a grandson of the champion Choice Goods, out of a First in the Ring dam. This bull is included in the sale, and will suit some man wanting a strong rugged bull. Some very attractive Scotch females in this offering that will be good additions to any herd. Eight sons of Challenger are listed, and the lot includes some good ones. Challenger 2d is a Victoria, a roan yearling, very thick and meaty, with a good head and horn. Beauty's Lad is a Queen of Beauty, and there is an Acanthus, a Lustre and some Scotch-topped Young Mary calves, all forming a lot of good, smooth reds and roans of much promise. Buyers will find this a good place to secure bargains. Mr. Bay has conducted his breeding operations in a quiet way, buying a lot of good cattle at many of the big sales during the past few years, and this is the first time that he has ever offered any cattle at public sale. The cattle are the natural increase of a strong producing herd, handled under conditions that tend toward future usefulness, and some from the herd of a gentlemen who is in every way reliable. Readers of The Homestead will make no mistake in attending this sale. It comes the day following the sale of Thos. Stanton, Wheaton, Ill., and can be easily reached from that point. The sale will be held in a comfortable pavilion in Aledo, which is the county seat of Mercer county, and can be reached by the Burlington railroad and also by the Rock Island Southern, an interurban line, from either Rock Island, Monmouth or Galesburg. Look up the advertisement on page 21 and write for a copy of the catalog to John M. Bay, Aledo, Ill., mentioning The Homestead when you write.

Urbandale Poland China Farm.

In an advertisement on page 21 F. E. Jackson, Hurley, S. D., informs our readers that he now offers for sale a number of fall and spring big-type Poland China boars as well as gilts, all sired by Dale Expansion. This hog is an animal of unusual merit. His blood lines are those which give promise of size and quality. He was bred by Henry Dorr, Remsen, Iowa, and his sire was Dorr's Expansion by Old Expansion. His dam was a daughter of Dorr's Tecumseh, he by a grandson of Chief Tecumseh 3d. On the side of the second dam he traces to Chief Tecumseh 3d, Guy Wilkes 2d and Look Me Over, all hogs of extraordinary size and unusual quality. Mr. Jackson also offers for sale a number of choice sows bred to Dale Expansion for fall litters. The Jackson herd contains animals bearing the blood of Blue Valley Quality, Pawnee Chief, Longfellow, Big Hadley, Big Prospect, Big Victor, Chief Price and other sires that have done much to establish the superiority of big-type Poland Chinas. Details concerning breeding may be learned from a handsomely printed catalog which Mr. Jackson has recently issued. The catalog or special prices offered may be secured by writing to F. E. Jackson, Hurley, S. D.

John T. Stadler's Durocs.

One of the careful buyers of the very best Durocs to be found in the state is John T. Stadler, Minden, Neb. The writer called on him recently and found that he had saved a fairly good crop of spring pigs, and that they were extra good. They are all sired by Advancer's Wonder, and by the way, one of the best breeding boars that we have seen in some time. A mighty choice lot of fall sows are on the farm, mostly the get of Advancer's Wonder and out of daughters of Golden Model 5th. Mr. Stadler has recently purchased a new boar. He is a son of Byrd's Wonder by C. W. Again and out of Iowa Belle by Iowa Commodore. He is quite a fine young boar and we believe will mate very fine with the Advancer's Wonder Stuff. A few fall sows will be bred for early fall litter and a limited number will be for sale. They are well worth the price asked, and we would urge those in the market for breeding stock not to pass this opportunity. Advancer's Wonder is also for sale. He is by Advancer 5th, by Advancer and out of Miss Crimson Kirk 2d, by Lincoln Chief. Lincoln Chief is by Ohio Chief and out of Morrison's Peach by Crimson Wonder. Lincoln Chief is a litter mate to Lincoln Wonder and he has sired a lot of wonderfully good stuff. Should you write mention The Homestead.

Big Doll For You

D-L-I-
D-M-L-

Can you fill in the blank spaces above and complete the doll's name? You can do this if you try. Just write and tell me what the name is and I will tell you how you can get this beautiful doll, nearly two feet tall and jointed at shoulders and hips. Her eyes open and shut, she has long flaxen hair and is beautifully dressed. You will be the proudest girl in your neighborhood when you get this doll, and she is yours for just a little easy work. Be sure to write and tell me her name today so I can send you my great free offer.

PEOPLES CO.

902 Popular Bldg., DesMoines, Iowa

W. M. Putman, the Auctioneer.

Few men in the country are so well schooled in the breeding of pure-bred hogs as Col. W. M. Putman, Tecumseh, Neb., and the fact that he has the past season been employed on most all of the best Duroc sales of the country is ample evidence that Duroc breeders of the country know that which is a good business move for them. Col. Putman has bred and shown some of the most famous hogs of the breed, and is today maintaining one of the very best herds of the corn belt. Col. Putman is starting an advertisement in this paper this week, soliciting a share of your business, and we bespeak careful consideration of him and his knowledge of the business. Thoroughly posted on values, acquainted with practically every swine breeder in the West, and a tireless worker are some of the things that should commend him to those looking

At Holbrook, Iowa, Next Tuesday, May 27th.

WILL occur the sale of high-class Aberdeen Angus bulls and females to be held by P. J. Donohoe and Wm. Cash. This is one of the best bred and best individual offerings of Angus that have been sold at auction. Nearly all the great show and breeding bulls of the breed are found in the pedigrees of the cattle listed. These cattle have a right to be good because their immediate ancestors have been good. Such cattle are the proper kind with which to found a herd. We want to urge *new breeders* and *beginners* to attend this sale and get the right sort of seed stock. If they do it will be easy for them to sell their surplus stock. Write me for a catalog mentioning The Homestead.

P. J. DONOHOE - HOLBROOK, IOWA.

A GRAND OFFERING OF
SCOTCH SHORT-HORN CATTLE
TO BE HELD AT THE FARM NEAR
HOMESTEAD, IOWA, THURS., JUNE 12, 1913
80 HEAD--60 FEMALES--20 BULLS

THIS firm has selected this draft of eighty head from their herd of 300 cattle and some of the most desirable females they own have been cataloged. Every animal in the sale is of the best Scotch breeding, coming from such families as the Queen of Beauty, Butterfly, Avalanche, Emma, Duchess of Gloster, Flora, Missie and others. The 20 bulls are an exceptionally high-class lot and the breeder who is needing a herd bull should keep this sale in mind and make arrangements to be present. For generations these cattle are backed up by the very best breeding and this will be an excellent opportunity for breeders needing a herd bull or a few high-class females to get them at their own price. So many cattle to be sold in one day insures many bargains to those in attendance. All cattle will be tuberculin tested before sale. Catalog will be mailed only on application to

OWENS BROTHERS Box H HOMESTEAD, IOWA

Fred Reppert, Carey M. Jones and Geo. Burge, Auctioneers.

for an auctioneer for the coming fall and winter sales. Mention this paper and address Col. Putman at once for dates and terms.

Holstein-Friesian Bulls for Sale.

In an advertisement on page 21 A. J. Podendorf announces that he has for sale two unusually well-bred Holstein-Friesian bulls. One of these, thirteen months old, is a son of Dutchland Hengerveld Winona Boy. His dam is a thirty-one-pound butter cow with a milk record of 627 pounds. Mr. Podendorf thought so much of this calf that he used him on all of his A. R. O. cows. The other calf was dropped April 5th. His sire was Pontiac Rag Apple Korndyke, whose dam had a seven-day butter record of thirty-one pounds. The dam of the calf has a twenty-one pound butter record. Both of these bulls are as well bred as any in the state. They are right in every way and will be sold at low prices in order to make room. Address inquiries to A. J. Podendorf, Logan, Iowa.

Sale of Sensational Short-horns.

As has already been announced in these columns the entire herd of Short-horn cattle owned by George J. Sayer, McHenry, Ill., has been purchased by Thos. Stanton, and on June 3d at his Sittyton Grove Stock Farm, Wheaton, Ill., Mr. Stanton will submit to the public forty head of the tops of his herd, comprising more championship-show material and high-class breeding Short-horns than has been submitted at any sale of any breed in this country for years. There is not a plain animal in the offering, and among them are many that from the standpoint of individual merit and rich breeding cannot be duplicated by any breeder. Mr. Sayer spent a large amount of money in getting his herd together, and it is the pick of this choice lot of cattle that Mr. Stanton will sell June 3d. There are six bulls listed, including the International champions, Roan Sultan and White Star, in addition to which Mr. Stanton has listed his bull Browndale Sultan, the sensational son of Avondale. The list of females reads like the show report of the International. Included among the cows and heifers in the sale is the sensational Fair Start 2d, a show cow that has been in the front rank from calfhood to the present time, has produced three calves and sells with a bull calf at foot by Roan Sultan; Queen Mildred, an outstanding aged cow, the good two-year-old 78th Duchess of Gloster by True Cumberland, the senior Sittyton Anna, and the junior Sittyton Lady 2d, the last calf sired by Glenbrook Sultan. In addition there will be half a dozen Angustas, more of this popular tribe than has ever been offered in one sale; Susan Cumberland, a cow known to all Short-horn admirers, and numerous other cows and heifers of the class that will add strength to any herd fortunate enough to secure them. It is the opportunity for the breeder, the showman or the bull buyer, as the cattle cannot fail to interest every person connected with the Short-horn cattle industry. There are five daughters of the champion Whitehall Sultan, more than can be secured at any other place; four daughters of the champion Cumberland's Last; five by Glenbrook Sultan; two by the champion Ceremonious Archer; two by Uppermill Omega, the great Canadian sire of high-class cattle, and several others by sires of country-wide fame. Mr. Stanton considers this by far the greatest lot of cattle that he has ever handled, and he has certainly assembled and dispersed herds rated as the very best. He knows the cattle industry thoroughly, has the knowledge and judgment necessary for a successful carrying on of big operations. He invites the inspection, and appraisal of these cattle, knowing they will suit in every way. No statement could be made regarding this offering that would be in any way extravagant, as it is a most sensational lot in every way. The advertisement appears on page 21. Look it up and write at once for a catalog to Thos. Stanton, Wheaton, Ill., mentioning The Homestead when you write.

Smith & Son's Durocs.

The writer recently called on the veteran Duroc breeders, Smith & Son, Kearney, Neb., and we wish to say that we were much pleased with the line-up of stock we found on the farm. They have one of the model farms of the state, and they have a herd of Durocs that are in the same class. This herd has always been noted for the high class lot of stuff sent out, and this season we believe that it is in better shape that at any previous time. The great breeding boar, Model Goods by Golden Model 2d, has left a lot of prime stuff in the herd. They sold this boar late last fall and while it looked as though he could not well be kept longer, yet he is the sort of breeder that one can well tie to. Some fall boars, also some gilts by Model Goods and out of the great sow, Sells Crimson Beauty, a litter mate to Uneeda Crimson Wonder and a few other great ones of the famous Sells mating of Crimson Wonder Again and H. A.'s Queen, look like mighty interesting competition at the state fair this fall. One of these boars is simply outstanding. Another boar of much merit, and a boar that has every characteristic of the ribbon winner is Queen's Wonder. He is a sire of the right kind of stock and individually is the same order. He will probably be seen this fall, and if gotten into the right kind of condition will make a good candidate for the good places. With the other boars we must mention Queen's Wonder Again by Queen's Wonder and out of a dam by Improver's Best Improver 2d, his dam is the great sow Sells' Crimson Beauty. We would urge those of our readers in search of a good fall boar to write Smith & Son at once. The have some that are herd heading and prize-winning sort. They can be had worth the money. Write today.

Good's Late Importation.

C. C. Good, Ogden, Iowa, has just returned from the old country where he obtained a fine collection of Percheron and Belgian stallions and mares which he now offers for the inspection of his patrons. Some most attractive individuals are included in the lot. They are selected early before other importers reached the field and with Mr. Good's excellent judgment it may be depended upon that he has something well worth looking after.

The Rees Short-horn Sale.

On Wednesday, June 11th, at South Omaha, Neb., Howell Rees & Son, Pilger, Neb., will make their second annual sale of Scotch Short-horns and they have listed forty-five head for the occasion. We have looked this offering over very carefully and we will say to The Homestead readers that it is the best lot of cattle that this firm has ever cataloged for a public sale. Just a word here regarding the two bulls at the head of their herd. Ruberta's Goods hardly needs mention, as he has been before the public eye for a long while. However, for fear some new breeder may not know about him we will say he is a son of Golden Goods, one of the greatest sons of Imp. Choice Goods and out of that great cow Golden Abbotsburn. The dam of Ruberta's Goods is the noted cow Ruberta, that in her day was one of the greatest show and breeding cows that has ever lived. Ruberta's Goods was junior champion at the Nebraska State Fair and also at the American Royal a number of years ago and since that time he has developed into one of the foremost breeding bulls in this country. His get in the Rees sale last year, and his get in many other sales since that time have been eagerly sought after and they have brought high prices. Quite a number of his sons and daughters will be found in this sale and most of the calves at side of dams will be by him. Their new bull is Whitehall Rosedale, a wonderfully good son of the great bull Avondale. His dam is Rosewood Pride, one of the greatest breeding cows of the present day and she is the dam of some of the best bulls today at the head of the best known herds in this country, Rees & Son paid $2,325 for this bull and he is well worth the money. He is a wonderfully fleshed bull, deep in body, with wide, deep quarters, a good masculine head and is a bull that is unquestionably one of the foremost in the West today. We will have more to say regarding this bull in later issues of The Homestead. Quite a few of the cows in the sale will be bred to him, and they will be good things to buy. Just a word about their bull offering. They are selling eight very choice young bulls any any one will make a good herd bull. One of the best of these is Good Secret, a June calf by Ruberta's Goods out of Sunny Maid 2d, she being a daughter of that noted bull, Imp. McNaughton. This bull is a red roan in color and he is a Cruickshank Secret. Here is a bull that is destined to make a most excellent herd bull and he should go to the head of some good herd. Lavender Goods 2d is another good one and he is also sired by Ruberta's Goods and his dam is Lavender Lady 2d by Imp. Choice Goods. This is a red bull, a splendid calf and a most excellently bred fellow. Many breeders will like this bull for a herd header. Orange Goods is sired by Ruberta's Goods and is out of an Orange Blossom cow. He is a rich red bull in color, a very thick fellow and quite a good one. Crescent Goods is a two-year-old son of Ruberta's Goods and out of Imp. Crescent 8th. This is a white bull and has been in their show herd and has been quite a winner. He was second at Lincoln, first at Hutchinson, Topeka and Oklahoma City and was third at the Royal. The man that is looking for a white bull will be pleased with this fellow. A good yearling white bull is Callant Tyne, a son of the $1,000 bull, The Callant. The sire of this bull is a full brother to Whitehall Rosedale, and there is an outcome to this youngster. There is a Cruickshank Nompareil bull in the sale by Ruberta's Goods and an Orange Blossom bull by Victor Sultan, and both of these are quite good bulls. In later issues we will have something to say

HOWELL REES & SON'S

ALL-SCOTCH SHORT-HORN SALE

SOUTH OMAHA, NEBRASKA,

WEDNESDAY, JUNE 11, 1913

45 HEAD---37 COWS AND HEIFERS, 10 CALVES AT FOOT, 8 YOUNG BULLS---45 HEAD

WE INVITE you to our second annual sale and we will show you one of the best offerings of Scotch cattle you have ever seen. Included will be eight choicely bred Scotch bulls, any one of which is good enough to head any herd. Among these is **Good Secret,** a son of our great bull, Ruberta's Goods, and he is out of a daughter of Imp. McNaughten. He is a Cruickshank Secret and an outstanding good one. **Lavender Goods 2d** is also a son of Ruberta's Goods and out of Lavender Lady 2d by Imp. Choice Goods and a herd header. **Orange Goods, Crescent Goods** and **Ruberta's Nonpareil** are all sired by Ruberta's Goods and belong to the Cruickshank Orange Blossom, Nonpareil and Crocus tribes. Callant Tyne is a son of The Callant, and Fair Sultan is a son of Victor Sultan. These are a royally bred lot of bulls and we invite your most critical inspection. We are selling a grand lot of Scotch cows and heifers, including some of our very best show heifers. There will be ten good calves at side of dams, sired by **Ruberta's Goods, Whitehall Rosedale** and **Victor Sultan.** The most fashionable and popular Scotch families will be represented in our sale, and it is an offerng that we feel proud of. If you want a good young Scotch bull to head your herd or if you want some high-class cows, make it a point to attend our sale. Catalog now ready and can be had for the asking. Address

HOWELL REES & SON - - - - - - - - - PILGER, NEBRASKA.

Cols. Woods, Jones and Reppert, auctioneers. Please mention The Homestead when writing for catalog.

of the splendid offering of cows they are selling in this sale. Write for their catalog at once and kindly mention The Homestead.

Taylor & Welty Hereford Dispersion.

One of the most remarkable sales of Hereford cattle that has taken place this season occurred at Wanatah, Ind., April 29th. The cattle were owned by Taylor & Welty, and it was a dissolution sale. The cattle were presented to the purchasers in their everyday working condition, and no special effort had been made to put them in high condition. However, the whole herd was one that was well appreciated, and the prices the animals brought is sufficient evidence of the same. Mr. Taylor informs us that he has retained some of the cream of his production and will continue raising high-class Hereford cattle at his Elk Horn Hereford stock farms, located in Carroll county, Ill. His son is now located on these farms, and handles the cattle, and as soon as Mr. Taylor closes up his business fully at Wanatah he will join his son at the farms above mentioned, and they will keep on raising high-class Hereford cattle.

Owens Bros.' Great Short-horn Sale.

On Thursday, June 12th, Owen Bros., Homestead, Iowa, will sell a select draft of eighty Scotch Short-horns at public auction. The sale will be held at the farm four miles south of town. This herd is one of the old-established herds in the state. About thirty-five years ago the senior Mr. Owens, father of the present firm of Owens Bros., founded this herd, and from that day to this the constant aim has been to improve the herd. Only the very best Scotch bulls obtainable have been used during this long period. This Homestead representative has been familiar with this herd for some years and upon a recent inspection can frankly state that the herd is better now than at any previous time. Men who have known Owens Bros. know that they have never stopped on price when buying a herd bull. Among the recent bulls purchased to use in the herd is Cumberland Dictator, a son of Burwood Royal and out of a Cumberland's Last cow. This is a show bull and one of the thickest bulls to be found in the state. He has a world of Short-horn character and has that beefy conformation that all breeders admire. Another good young bull that is now in service is Sultan Goods, a Cruickshank Lavender sired by Missie's Sultan and out of a Good Choice dam. This bull is siring some extra good calves. Scottish Lad is a bull of their own breeding sired by Secret's Best, while the next six sires in his pedigree were bred by Amos Cruickshank. Most of the young calves are sired by and the cows in the sale are bred to these bulls. It is an important consideration when buying a cow to know that she is in calf to a good bull, as you may then reasonably expect a calf with merit. Practically every animal in the sale is of the very best of Scotch breeding. A number are of the Queen of Beauty family that has given this herd many of its best cattle. Twenty bulls and sixty females make up the offering. The twenty bulls are an excellent bunch and among them are a number of herd-heading character. Courtier's Crown is a three-year-old red bull, that sells, sired by Courtier 5th and of the Queen of Beauty family. He has been used some in the herd with excellent results, but owing to the fact that there are so many of the females closely related to him Owens Bros. have decided to list him in this sale for public appraisal. If they could use this bull to advantage in the herd he would not be offered for sale at any price. He is weighing 2,200 pounds with a good covering of flesh, a good spring of rib and in fact is a good bull from end to end. A bull of this character is not an experiment, but a tried herd bull from which excellent results should be obtained. J. A. Daniels, Williamsburg, Iowa, is listing a good young bull in Sultan's Magnate, a July calf by Monarque Sultan, a grandson of Whitehall Sultan and out of a daughter of Imp. Blossom. In next week's issue of The Homestead we will give full particulars regarding the bull offering in this sale. In the meantime write Owens Bros., Box H., Homestead, Iowa, for catalog which will be sent only on application. See the advertisement on page 19.

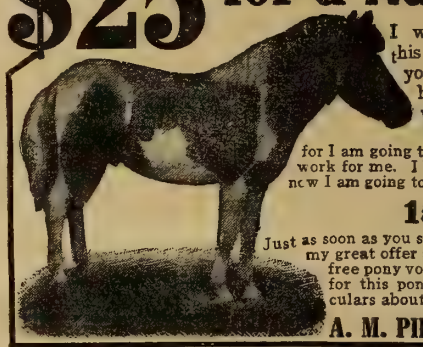
Morman Offers Scotch Bulls.

Anyone wanting a good, young Scotch or Scotch-topped bull should write or go and see J. C. Morman, Crofton, Neb. Mr. Morman has one of the good, though not large, herds in Nebraska and he has five good young bulls for sale. Four of these are straight Scotch. Two of these are sired by White Archer, a son of Faithful Archer, and three are sired by Gallant Sultan. Two of these are good roans, are both Scotch and descend from Imp. Sylvia. Mr. Morman is only asking $150 for these young Scotch bulls and they are bargains at that figure. When Writing Mr. Morman about these bulls kindly mention The Homestead .

The Holbrook Angus Sale—Last Call.

This is the last opportunity we will have of calling the attention of our readers to the offering of high-class Aberdeen Angus cattle to be sold at public auction in the Holbrook sale pavilion at Holbrook, Iowa, on May 27th. P. J. Donohoe, Holbrook, is consigning the larger part of the offering and William Cash, Williamsburg, is consigning about fifteen extra good females. These two men have been faithful boosters for the Aberdeen Angus breed for a number of years in that they have bred a lot of high-class cattle and in this way exploited the merits of the breed to the general public. These men have proven themselves constructive breeders and it is to such men that the breed must look for improvement. From herds with such reputations new breeders should buy their foundation stock as they always have a greater certainty of producing higher class cattle from such a foundation than if in the start they had bought cattle indiscrimately. The blood lines of the offering are above reproach and the pedigree crank could not find fault with any of the pedigrees to be found in the catalog of this sale. Mr. Donohoe has always had a personal interest in the small breeders and in the man who is just starting a herd. It has always been a pleasure for him to give such men any information and help that he may possess. The progeny of such bulls as the celebrated Black Woodlawn, Prince Ito, Black King of Homedale 2d, Erwin C., Black King of Woodlawn and many others of note, are cataloged. The leading families such as Blackbirds, Trojan Ericas, Queen Mothers and Prides, make up the offering. In the above appeal to new breeders to attend the sale and take home some of these cattle, we do not want older breeders to infer that the class of cattle to be sold here is not good enough for any herd as such is not the case. The individual merit of this offering is as good as will be found in any sale and the breeder and showman can find plenty of material that will suit his fancy. What we want to impress upon the new breeder or beginner is the fact that if he will buy some of these high-class cattle and give them care, at the end of five years he will be so much farther ahead in the breeding business than he would be if the purchased cheaper cattle to start with, that there would be no comparison. The Holbrook sale pavilion is five miles east of Parnell, Iowa, which is located on the Marion-Ottumwa branch of the C. M. & St. P. R. R. Parties from a distance should come to Parnell where they will find free transportation to Holbrook. Anyone interested in good beef cattle will be a welcome visitor at this sale. Write Mr. Donohoe for catalog as per the announcement on page 19, mention The Homestead.

$25 for a Name for this Pony



I will give **$25.00 FREE** for the best name for this beautiful prize Shetland pony. Send the best name you can think of right away, for not only do you have a good chance to win the $25 prize but

A. M. PIPER, 650 Popular Bldg., Des Moines, Ia.

Buy Your Boar Now.

Readers of The Homestead who will want a Poland China boar this fall will be interested in the advertisement of J. O. James, Braddyville, Iowa, on page 22. He is now booking orders for boar and sow pigs to be delivered in June, and he is making the substantial price of $25 to $35 on these pigs if ordered right away. These litters are sired by the sensational boars, Big Orange, Otts' Big Orange, Big Sensation, Big Orange's King, A Wonder's Great and Gritters' best, and they are out of sows that weigh from 700 to 800 pounds. The blood of old Pawnee Lad percolates through the most of these sows and no boar used in the West the past ten years has exerted a greater influence on the Poland China breed towards bringing it to its present high standard of perfection than did old Pawnee Lad. Don't delay ordering, as these pigs are going fast. Write Mr. James at once and send your check and description and leave it to him to pick you a good pig. When writing him kindly mention The Homestead.

Bellows Bros., Short-horn Sale.

Each year those interested in superior live stock look forward to the anual June sale of Short-horn cattle made by Bellows Bros., Maryville, Mo. This year the sale will be held on Tuesday, June 10th, and buyers are to have an opportunity such as has not recently been afforded to select choice young herd headers and females, of such superior individual merit and superb breeding that the most discriminating cattleman canot fail to be pleased. The Bellows Bros.' herds have furnished many great bulls to breeders and by the concentration of the blood of old Choice Goods, through his sons, Good Choice (sire of the champion Diamond Goods) and Best of Goods, with the blood of such noted sires as Whitehall Sultan, Hampton's Best, Red Knight and other leading bulls, the Bellows Bros. show by the class of this offering that they are past masters in breeding superior Short-horns. Twelve bulls and thirty-seven females are listed. Those looking for bulls fit to head the best herds will be pleased with several of these roans and reds. Diamond Goods, the leading bull in the Bellows Bros.' herds is the sire of one-half of these and the strong character, quality and substance of this magnificent bull is transmitted to his sons to such an extent they cannot fail to do good. To own a son of Diamond Goods assures a high-class herd header. Diamond Emblem, a January yearling, by Diamond Goods, and out of a beautifully bred Marr Emma dam is probably the best bull Bellows Bros. ever offered. He is right, he has the style and character essential in a show and breeding bull. He is low set, evenly balanced, with great covering over back and loin, is smooth and has two good ends with proper coupling. He should go to a good herd in need of a high-class roan bull, one of the best to be had. Corner Stone, an October yearling, by Superb Goods one of the good breeding sons of Good Choice is out of one of Bellows Bros.' reliable Queen of Beauty cows by Best of Goods. Those who have purchased stock from this family have had excellent success and Corner Stone is a bull with such substance, strong character, even balance and such good head and eye that he should prove one of the most valuable sires of his age. He is a good roan and is a thick fellow. Note in catalog what Bellows Bros. say of his breeding. Sultan's Crown, a roan September yearling, carries through his top crosses the blood of Choice Goods, Whitehall Sultan and Hampton's Best, three great bulls. He is a thick-fleshed fellow, deep and low set, is smooth and well covered over shoulders. He ranks among the good ones of the sale and should please. Mildred's Sultan by Missie's Sultan, will please those looking for a very thick, short-legged bull, one that Bellows Bros. think so much of that he has been used some in the herd. Diamond Abbott is a red two year old by Diamond Goods. His finish, thickness, two good ends, well-sprung rib and depth should make him one of the favorites. Victoria's Sultan by Missie's Sultan, is a Victoria that has been used liberally in the herd, as his depth, quality and character is such that Bellows Bros. like him and he should prove a valuable sire. Sweetheart Sultan by Sultan's Choice and out of a dam by Best of Goods is of the same tribe as the great Diamond Goods. He is a red and should be appreciated. Diamond Sultan of the Village Maid tribe is a roan by Diamond Goods and out of a strongly bred Whitehall Sultan cow. He is young, but should develop into one of the valuable bulls of the offering. There are other good bulls in the lot and all are bred along the lines mentioned. There will not again soon be such another chance at so great a number of herd-header prospects that will do good. All are bulls bred by Bellows Bros., eight roans, four are red. The female part of the sale is unquestionably one of the strongest ever put up. The Bellows' herd bulls are the sires of many. There is listed the greatest string of calves at foot ever seen in a sale ring and the fact that these cows and heifers are bred to such bulls as Diamond Goods, Sultan Supreme and other bulls that are in service in the Bellows Bros.' herds adds greatly to their value. The breeding of all is of the best. Extended mention of these

DISPERSION OF THE SAYER SHORT-HORNS

At Sittyton Grove Stock Farm, Wheaton, Ill., Tuesday, June 3d

50 HEAD, 6 BULLS, 15 COWS WITH CALVES AT FOOT

HAVING purchased the entire herd of Mr. George J. Sayer, I will offer a draft of fifty head of the tops, comprising the greatest lot of Short-horns ever submitted at public sale. **The Bull List** includes the **International Champions, Roan Sultan** and **White Star,** in addition to which I have catalogued **Browndale Sultan,** the great son of Avondale. Three high-class young bulls are also listed. **The Show Females, Imp. Fair Start 2d** with bull calf at foot by Roan Sultan; **Queen Mildred,** bred to Roan Sultan; **78th Duchess of Gloster** by True Cumberland; **Sayer's Georgia** by Roan Sultan; **Sittyton Fashion** by Leader of Fashion; **Sittyton Anna** and **Sittyton Lady 2d,** form the greatest lot of winning show propositions, from junior yearlings to aged cows, ever offered in one sale.. **A Great Lot of Breeding Cows,** fifteen of them with calves at foot by Prince Imperial, Roan Sultan, Faithful Archer by Ceremonious Archer, and all of breeding age bred to one of these sires, will be presented for public approval. There are six choicely bred Augustas in this lot, as well as representatives of many other popular Scotch tribes. There will be four daughters of Cumberland's Last, five daughters of Whitehall Sultan, five daughters of Glenbrook Sultan and daughters of Uppermill Omega, Leader of Fashion, Ceremonious Archer and other noted sires. This is the Short-horn event of the year. Send for the catalog today, mentioning The Homestead. Address

COLS. CAREY M. JONES and FRED REPPERT, Auctioneers

THOS. STANTON, WHEATON, ILLINOIS

will appear next week. Note the advertisemeent on page 18 and send for catalog mentioning this paper.

Vaughn's Good Short-horn Bulls.

W. W. Vaughn, Marion, Iowa, has enjoyed an excellent trade in Short-horns during the past few months and at the present time has a few extra good Scotch bulls that would please prospective purchasers if they would visit the farm and inspect these bulls. There is one thirteen-months-old bull sired by Ruby King out of a daughter of Imp. Claudia 4th, one of the best breeding cows Mr. Vaughn has on the farm. This bull is a big, strong, growthy, good-loined bull that should prove a good sire. There is another extra good eleven-months-old calf sired by Brawith Lad and of the Rosemary family that is an extra smooth, good ribbed, stylish calf that will develop into an excellent bull. We can strongly recommend this calf to our readers and the price asked for these bulls is well within their value. Ruby King is an extra well-bred Scotch bull and has proven a sire of merit. Mr. Vaughn has a number of calves from eight to ten months of age that he would sell. This is one of the oldest herds in the state and the individual merit of the cattle in many communities has been due to the good bulls sent out from this herd. Write or visit Mr. Vaughn Box H, Homestead, Iowa, for catalog if interested. See page 23.

IOWANA FARMS BERKSHIRES

THE **great champion, RIVAL'S CHAMPION 112500,** in service. Assisted by Artful Belle's Rival 3d, Masterpiece Rival 2d and other leaders.
